COTTON.

If cotton is no more a "king," it is still a powerful prince, who helps considerably in the progress and wealth of the United States, and keeps a goodly part of the world under their domination. It is impossible that it should be otherwise, for the soil of America is, through a special gift of Providence, the best adapted to cotton cultivation. It produces, at the same time, the highest quality of long silky Sea Island cotton, and the largest quantity on a given area of ground. The most conclusive evidence of the superiority of the United States in the matter of cotton production over Egypt, China, Brazil, and East Indies, is to be found in the fact that, during the late war, cotton, though smuggled at the rate of a few bales on every blockade-runner, was still sufficient to provide the Confederacy with money, the nerve of war, and that, at present, the whole country, though producing yet less cotton than before 1861, sells it for nearly the same amount of money as it did previously.

The climax of cotton production was reached in 1859, but in the early days of the colonization, American cotton had asserted its superiority. As early as in the year 1748, an inferior quality of cotton shipped from Charleston, realized upon the English market, £3 11s. 5d. per bag. But the British could not believe that America would ever become a cotton-producing country; in 1784, seven bales having been sent to England, were seized by the Custom-House authorities, who declared *ex cathedrâ* that the invoice was not *bonâ fide*, for America could not produce such a quantity of the white crop. Still, they had to be reconciled to the idea that such a fact was possible; and the English importations ran to 14,109,389 pounds and even 842 bales, at the time when the war for Independence broke out. About at the same time the Sea Island cotton, the pride of American production, was first raised on the Georgia coast, especially at Hilton Head, along the swampy shores of South Carolina. It was sold at prices which forebode the cotton famine prices between 1861 and 1865, that is to say, 47 cents a pound, whilst other cotton brought only 27 cents. The fibre was even so long, that the English manufacturers, whose machinery was entirely adapted to short Surat cotton, took to cutting in two the newly imported Sea Island, before spinning it. Soon after the success won by the Hilton Head cotton, the Edisto cotton was sold, in 1805, at more than one dollar a pound; and it reached, in 1828, two dollars a pound, the highest price ever paid for cotton.

In 1857, one bale sent from the same county of Edisto, was sold at the rate of $1.35 a pound, for that staple was considered quite superior to the cotton which had given the famous thread No. 900, so much admired at the London Universal Exhibition of 1851.

Between 1849 and 1859, the cotton production was nearly doubled; 2,445,793 bales of 400 pounds each, in 1849, and 4,675,770 bales in 1859. The rumors of war had already exercised their influence upon the crop of 1860–'61, which reached only to 3,656,086 bales.

The area occupied by the cotton lands in America might be called the slavery area, for it occupies just the same ground as that institution occupied. The northern belt of the cotton-producing country is marked by the parallel 36°, the one so famous under the name of Mason and Dixon's line, which had been stretched out as a limit beyond which slavery was told: "Thou shalt not go farther!" Thirteen States produce cotton, but only eight of them, bordering the Atlantic Ocean and the Mexican Gulf, are engaged in the culture of the seed on a large scale. In taking all of the thirteen States together, the average productive capacity of the soil amounts to one-half bale per acre, as shown by the statistics of 1872.

The principal ports of exportations, according to the statements of 1872–'73, are:

	Bales for foreign ports.	Bales for domestic ports.
Charleston, S. C.	160,169	225,016
Galveston, Texas	210,438	133,304
Mobile, Ala	132,130	197,131
New Orleans	1,177,058	228,968
Savannah, Ga.	375,895	248,752

Added to these figures must be cotton shipped at smaller ports, and also the interior movement of cotton to northern mills and markets, through the rivers and over the railroads, up the valley of the Mississippi. This movement amounted, in 1873, to 402,296 bales.

The following table will show the progress of cotton cultivation and exportation during the few years previous to the war, which put a momentary check to that branch of national wealth:

The crops were in

1851–52	of	3,015,029 bales.
1852–53	"	3,262,882 "
1853–54	"	2,930,027 "
1854–55	"	2,847,339 "
1855–56	"	3,527,845 "
1856–57	"	2,939,519 "
1857–58	"	3,113,962 "
1858–59	"	3,851,481 "
1859–60	"	4,675,770 "
1860–61	"	3,656,086 "

The home consumption during the same years varied between 700,000 bales and 900,000. In 1857–58, only 595,562 bales were for home consumption, and in 1859–60, American manufacturers employed 978,043 bales. The lowest and highest figures of exportation for the same period were the following: 987,833,106 pounds in 1853–54, against 1,767,686,338 pounds in 1859–60. The average price of cotton jumped suddenly from its highest figure of 9.85 cents in former years to 12.55 per pound in 1856–57; 11.72 in 1857–58; 12.72, in 1858–59; 10.85, in 1859–60; 12.50, in 1860–61. After the opening of the civil war, cotton increased in value in proportion with the decrease in production, so that, on the 1st of January, 1863, the extent of the crop being estimated at the fourth of what it amounted formerly, the value of it was nearly equal to the value given precedently for a full crop.

It is impossible to get at any reliable statistics of the production of cotton during the civil war, which disturbed the administrative machinery of the United States. In the year which followed the termination of the war, the cotton crop was in—

1865–66	of	2,269,316 bales.
1866–67	"	2,097,254 "
1867–68	"	2,519,554 "
1868–79	"	2,366,467 "
1869–70	"	3,122,551 "
1870–71	"	4,362,317 "
1871–72	"	3,014,351 "
1872–73	"	3,930,508 "

The home consumption during these years increased steadily, as the following figures will show, commencing at 1865–66 inclusive:

1866	666,100 bales.
1867	770,030 "
1868	906,636 "
1869	926,374 "
1870	865,160 "
1871	1,110,196 "
1872	1,237,330 "
1873	1,201,127 "

A sudden increase in home consumption is thus shown within the last three years. It must be noticed also that the bales mentioned in the statistics of recent years are larger than the bales were before the year 1840, when they weighed no more than 395 or 397 pounds, whilst they are reckoned now at 440 and even at 464 pounds per bale. Foreign exportations kept about in the same ratio as formerly, being larger when the cotton crop was large itself and prices proportionately low, and being smaller when the crop decreased; the foreign manufacturers adopted American cotton in preference to any other, and their wants were the same after the American civil war as previous to it. It is a fact worth while to be borne in mind, that the superiority of the cotton of the United States has been demonstrated precisely by the eclipse through which the American staple passed during the war. All the energy and the whole moneyed power of England was brought to bear on the production of the Indian cotton, with the hope of finding in the East Indies a substitute for the American staple. These efforts were of no avail; no other article could take the place of the cotton of the United States, and immediately after the war foreign manufacturers called again at their former source of supply. The exportation following the close of the war would have been still larger if the home consumption had not increased at the same time, and thus enhanced the market price of cotton while it diminished the available exporting matter.

The prices paid for cotton since the war stand as follows:

	Per pound in New York market.
1865–66	43.20 cents.
1866–67	31.59 "
1867–68	24.85 "
1868–69	29.01 "
1869–70	23.98 "
1870–71	16.95 "
1871–72	20.48 "
1872–73	18.15 "

The nine Southern States which, before the war, were the most prominent for their cotton crops, have kept their position amongst the thirteen cotton-growing States since the war. In closing this subject of cotton-producing it may be important to state that statistics cannot be obtained of mathematical accuracy, for the small planters do not always report the state of their crops with a rigorous exactitude, and because a small portion of the cotton is consumed upon the plantation itself, without any record being made after the picking season to the county statistician. That explains to a certain degree why some authors put 4,861,292 bales as the largest crop acknowledged to have been gathered in the United States, that is, in 1859–60, whilst others put it at 4,300,000 bales; and a third author, the one we have adopted, puts the whole crop between the two former figures, that is, at 4,675,770 bales for 1859–60.

COMMERCE AND NAVIGATION.

The climax of navigation and shipbuilding was reached, in the United States, in June, 1861, when the American tonnage was 5,539,812 tons. That was the natural consequence of the development of American crops, and especially of the cotton crop, which had to be transported to Europe and other countries. The wheat and corn crops had been very good for some years, and cotton production attained in 1859–60 its highest figure, 4,675,770 bales; all this formed an immense amount of freight, which gave employment to any vessels which the American shipyards could send to sea. War and depression of trade came afterwards, and caused the American flag almost to disappear from the ocean. It is only within the last few months that shipbuilding has recovered some of its former activity, and the present embarrassment caused in England to that branch of industry by the demands of the workmen for increased wages tends to diminish English competition. America built more ships and steamers in the beginning of 1874 than she had done for the ten corresponding periods of previous years, and never was American superiority in shipbuilding shown better than in the magnificent steamers *City of Pekin* and *City of Tioko*, constructed by Roach & Sons, and launched from the Chester shipyards on the Delaware. These steamers, the largest afloat after the *Great Eastern*, belong to the Pacific Mail Steamship line.

It is quite natural that the mercantile marine of the United States should have progressed so remarkably, and should be called to a splendid prosperity in the future, for not only is America stretched along more than 6,000 miles of ocean shores, but its internal system of rivers is the most extensive and the best naturally-arranged of all countries, together with immense treasures in her forests and in her mines, to help the building of wooden and iron ships. As early as 1670 the North American Colonies were already so much developed, as to industry, that Sir Joshua Childs wrote: "Our American plantations employ nearly two-thirds of our English shipping, and thereby give constant subsistence to, it may be, 200,000 persons here at home." The American tonnage of that time was nearly 40,000 tons. One hundred years later, just on the eve of the Independence War, the vessels built in the Colonies averaged 20,000 tons. In 1820 the tonnage had not increased, as it did after the American crops enlarged through the agency of machinery and by a steady clearing of the West by an unceasing flow of immigration.

In 1820,	there were			47,780 tons.
1830,	"	637	vessels, and	58 094 "
1840,	"	872	"	118,309 "
1850,	"	1,360	"	272,218 "
1855,	"	2,034	"	583,450 "
1856,	"	1,703	"	469,393 "
1857,	"	1,334	"	378,804 "
1858,	"	1,225	"	242,286 "
1859,	"	870	"	126,601 "
1860,	"	1,701	"	212,892 "
1861,	"	1,143	"	233,194 "

The war in the South put a momentary stop to this great industry of the United States. The amount of registered and enrolled tonnage sold to foreigners in 1861 is stated to be 26,649 tons. Amount condemned as unseaworthy, 7,964 tons. The amount lost at sea, 59,567 tons. The net increase of tonnage for the year 1861 was 185,944 tons.

In forty-seven years, ending in 1861, the decrease of shipbuilding, and of ships and tonnage belonging to the United States, was 42.75 per cent. During the ten years preceding 1861, the same decrease went down to only 25 per cent. on the whole, or about 2.72 per cent. yearly, covering a loss of 1,821,827 tons. This is an insignificant loss when compared with the 3,589,300 tons built between 1852 and 1862; the yearly increase from 1854, until the war, amounted to 340,571 tons, not less than 264 steamers were constructed in the only year 1859–60. Shipbuilding was confined, at that time, almost exclusively to New York and New England; a few vessels were built at Baltimore, whose industry in that line received a severe blow from the war and from the competition of the Delaware shipyards. In 1855, the value of the tonnage built in New England was $20,000,000, whilst the South built only $1,160,000, and the West not even one million dollars. There were in the North nearly 11,000 workmen exclusively employed in this branch of industry, on an average of $500 each for annual wages. In 1856, the North built 1,205 vessels with a tonnage of 376,647 tons; in 1857, 983 vessels with 294,472 tons; in 1858, 739 vessels with 170,570 tons. The business was fostered by the bounties of the Federal Government paid to the fishermen for every ton on the vessels engaged in the fisheries. The amount of bounty paid in the twelve years ending in 1859, was of more than four millions of dollars, of which Massachusetts received two-thirds. New York State, being engaged more especially in the construction of other vessels larger than the fishing smacks, hardly received any bounty, but took the lead in shipbuilding.

On the 5,539,812 tons which formed in June, 1861, the entire tonnage of the United States, New York could claim 1,740,940 tons, that is, nearly 30 per cent. of the general total. And, as to shipbuilding alone, the State of New York constructed 46,359 tons, that is, nearly 20 per cent. of the whole tonnage, for the same year, ending June 30, 1861. In the three years, 1859, 1860, 1861, the State of Maine built 156,115 tons; Massachusetts, 101,937; Pennsylvania, 60,845, and the balance of the States built 189,183 tons. If each ton is reckoned at a valuation of $40, the tonnage of the State of New York was in June, 1861, 1,740,940 tons, valued at $59,637,600; and the tonnage of all the other States was 3,798,872 tons, valued at $151,954,880.

If we compare the figures of American vessels, before the war, that is, 5,539,812 tons, in June, 1861, with the figures of the last three years, a very large difference is to be found, showing to what extent the Rebellion crippled the industry and commerce of the United States.

In 1870, there were 7,825 vessels and 2,400,407 tons entered in the mercantile service belonging to America. In the same year, that which belonged to English trade with the United States was represented by 23,165 vessels and 5,993,153 tons.

But, in 1872, those figures were altered, and American commerce begins to recover. It numbers 7,092 vessels and 2,279,120 tons, whilst England decreases and is represented by 19,182 vessels and 5,468,327 tons.

There are motives, therefore, to expect that the United States will soon recover their

lost mercantile prestige on the seas. Nobody will deny that, at least in American waters, American ships were predominant, just before the war, when the following figures are remembered:

In 1861, for the fiscal year ending June 30, the whole number of American vessels entered from foreign countries was	11,251
Whole number of foreign vessels entered from foreign countries was	10,709
Whole number of American vessels cleared for foreign countries was	11,079
Whole number of foreign vessels cleared for foreign countries was	10,586
Tonnage of American vessels entered from foreign countries was	5,023,917
Tonnage of foreign vessels entered from foreign countries was	2,217,554
Tonnage of American vessels cleared for foreign countries was	4,889,313
Tonnage of foreign vessels cleared for foreign countries was	2,262,042

Such figures demonstrate sufficiently the strong vitality which shipbuilding and foreign commerce possessed in America, and they showed that if such a trade was temporarily prostrated by a five years' war, and by financial embarrassments likely to follow as a consequence, it would soon come again to life and prosperity. So has it been. Nobody could take from Americans their peculiar and superior science of shipbuilding, which has been evidenced to the world by the superior sailing qualities of the clippers, an exclusively American invention, and by the victories won by the American yachts in the Cowes races in 1869, and by the *Enchantress*, a New York yacht, which, in July, 1874, arrived first in the English Channel race. As to steamships, the glorious memory of the Collins line, which made such fast trips between New York and Liverpool, between 1855 and 1860, has not yet been eclipsed in the mind of the nautical world by the splendid passages of the White Star or Inman lines of transatlantic steamers. In 1861, there were but six different steamship lines; they carried 69,307 passengers, and 78,826 in 1862. At present, there is more than a score of these lines, and the United States, which did not own a single one, can boast of possessing the American line from Philadelphia to Liverpool, while they almost monopolize the carrying trade of the Pacific, between California and the coasts of Japan and China.

As to the Navy, the United States keep the lead, if not as to the quantity, at least as to the seagoing qualities of their ships. The art of building men-of-war was entirely changed in the making of the *Monitor*, No. 1. American iron-clads were the first to go to sea, and to support successfully the wear and tear and the dangers of long voyages. Just as Fulton was the first to navigate practically a steamboat on the Hudson, so now an American has demonstated to the astonished world, in the waters of Hampton Roads, that an iron-clad could navigate, and be, at the same time, a good, staunch and redoubtable man-of-war.

A country endowed, like the United States, with an immense territory, and with nearly every natural product of northern and southern climates, could hardly help being successful in general commerce. So it has been, from the very days of the colonization down to our own time, as is shown below by the statistics of the year ending April 30, 1874. Exportations from the country have nearly always been equal to the importations from abroad. In 1700 the exportations from New England and the North Atlantic colonies were of £395,000 against £344,000 of importations.

In 1860 the exportations amounted to $400,122,296, and the importations to $362,-162,941. The principal articles of exportation for 1861 were as follows:

Maritime products: whalebone, salt fish, oil, etc	$4,451,515
Forest products: bark, timber	10,260,809
Agricultural products: tobacco, raw sugar, cotton, pork	149,492,026
Specie and bullion	23,799,870

The exportations of home manufactures were valued at $228,699,486; of foreign articles at $20,645,427.

During the same year, 1860, the principal importations were coffee, tea, copper, raw silk, silk goods.

A question which is of the utmost importance to American commerce was temporarily solved in 1854 by the Reciprocity Treaty concluded with England. This treaty provided that certain specified articles were to be exchanged free between the United States and the Canadas, New Brunswick, and Nova Scotia. The great West found thus, for its products, an easy outflow into the British Provinces, as shown by the following figures: For the year ending June 30, 1861, American merchandise exported to those Provinces was valued at $208,825,783, while the importations from the same localities only reached $150,347,355. This was, as compared with 1853, an increase of $103,735,603 for exportations, and of $80,194,546 for importations.

The figures given below will show that American commerce and navigation begins, though slowly, to retrace their steps. This is due, in a great part, to what may be called the *personnel*, or the personal agencies which are at work to develop the resources of the United States under the head of Commerce, Navigation, and Transportation. The census of 1870 shows a population of 28,228,945 over the age of ten years, of which number 13,-970,079 are females. Out of this number we can enumerate, under the head of Commerce, Trade, and Navigation: 10,499 agents; 10,631 bankers and brokers (15 females); 14,362 barkeepers (70 females); 21,332 boatmen and watermen (30 females); 31,177 bookkeepers and accountants in stores (293 females); 7,338 canalmen (10 females); 222,-504 clerks in stores (6,194 females); 120,756 draymen, hackmen, teamsters, etc.; 154,027 employés of railroad companies (not clerks); 5,103 employés of street railroads (not clerks); 8,316 employés of telegraph companies (not clerks); 17,362 hucksters; 14,882 laborers; 3,728 milkmen and milkwomen; 473 mule-packers; 2,002 newspaper criers and carriers (7 females); 2,738 officials of banks; 1,902 officials of railroad companies; 72 officials of telegraph companies; 384 pawnbrokers; 16,975 pedlars; 3,649 pilots; 16,631 porters in stores and warehouses; 56,663 sailors; 14,203 salesmen and saleswomen (2,775 females); 3,567 shippers and freighters; 7,975 steamboatmen and women (40 females); 100,406 traders and dealers (not specified, of which 2,833 are females); 1,939 dealers in agricultural implements; 3,392 in books and stationery; 7,019 in boots and shoes; 4,087 in cabinet-ware; 8,234 in cigars and tobacco; 7,595 in clothing; 4,143 in coal; 2,493 in coal and wood; 1,701 in cotton; 1,765 in crockery, china, and stoneware; 17,369 in drugs and medicines; 39,790 in dry goods (661 females); 6,402 gold and silver-ware and jewelry; 74,-410 groceries (1,197 females); 3,375 in hats and caps; 1,464 in ice; 9,003 in iron, tin, and copper wares; 2,261 in leather, hides, and skins; 11,718 in liquors (106 females); 7,723 in live stock (5 females); 9,440 in lumber (4 females); 1,455 in newspapers and periodicals; 11,809 in produce (63 females); 7,528 in provisions; 8,933 in real estate; 3,152 in sewing machines; 1,996 undertakers (20 females); 926 weighers, gaugers, and measurers; 93 wreckers.

The latest report on hand, published by the Bureau of Statistics, and which gives figures and data as recent as the 30th September, 1873, presents some interesting particulars relative to the trade of the United States with different countries in Asia and in Europe. A report from the Consul-General in London indicates that the exportation from that port to the United States, for the year ending September 30, 1873, was £1,092,911, or twelve and one-half per centum less in value than that of the preceding year. The total value of the imports entered for consumption into the Dominion of Canada for the fiscal year ending June, 1872, amounted to $107,709,116, being an increase of $20,-761,634, or nearly twenty-four per centum over the imports of the previous year. The exports for the same period amounted to $82,639,663, being an increase over the year 1871 of $8,466,045, or nearly eleven and one-half per centum. The imports into Canada from the United States, entered for home consumption, amounted, during the above period, to $34,217,969, being an increase over 1870 and 1871 of $5,195,582. The exports to the United States for the same period amounted to $31,896,816—$921,174 more than the previous year, while during the year ending June 30, 1871, the exports from Canada to the United States exceeded the imports from this country by $1,953,255; during the corresponding period of 1871 and 1872 the reverse was the case by $2,321,153.

The Consul at Marseilles has furnished statements of the imports and exports of France for the first eight months of 1873 in advance of the annual official report. Those statements promise an increase for the past year of over $130,000,000 as compared with the imports and exports of 1870. The aggregate value of the declared exports to the United States from the Consular districts of this Government in France is reported as amounting to $69,077,562 in 1872. This is an increase of 18,752,888 over the year 1871.

The declared value of the exports to the United States from the Consular districts of this Government in Germany, for the year 1872, is estimated at $37,177,000, this amount exceeding that for 1871 by more than $4,000,-000.

The political disturbances in Spain do not

appear to have produced a decline in the commerce of that Republic. Indeed, the official statement shows an increase of more than $40,000,000 in the value of the imports for the first six months of 1873, as compared with the imports for the corresponding period of 1872. The Minister at Madrid reports that he believes the returns of the exports will afford even a more favorable exhibit.

During the five years ending with 1872, the commerce between the United States and Switzerland has doubled. The value of watches exported to this country in 1872 is reported as having amounted to $3,600,000.

The direct import and export trade of China with the United States appears to be very small, but the American inland and coast trade is reported to exceed that of any other nation. The entire American trade, foreign and coasting, forms nearly thirty-seven per centum of the whole foreign trade of China, and contributes more than twenty-three and a half per centum of the revenue collected by the foreign customs departments.

We will end this chapter with a general view of the state of Trade and Shipping of the country, taken from a recent point of view. The latest report, issued by the Bureau of Statistics of the Treasury Department, includes the ten months ending April 30th, 1874, and it shows that for the period indicated above the United States imported $495,304,376 in 1874, against $556,567,409 in the corresponding period of 1873:

	Dom. Exports.	For. Exports.
1874.....	$518,951,386	$18,702,172
1873.....	485,457,353	22,105,593

The specie movement included in the above statistics is, relatively, of an inconsiderable value; for in 1874 the United States imported a little over $25,000,000, and they exported $39,175,676 of specie and bullion.

In making allowance for the differences in the warehouse amount, the exports in the same period are in excess for 1874 of the imports to the extent of nearly $30,000,000, while for 1873 the imports exceeded the exports by $68,411,617.

The carrying trade stands as follows:

For 1874—In American vessels, about	$290,000,000
In Foreign vessels.....	780,000,000
For 1873—In American vessels.....	284,000,000
In Foreign vessels.....	811,000,000

That shows that, of the total trade by water, 74 per cent. was carried by foreign vessels in 1873, and 73 per cent. in 1874.

For the twelve months ending April 30, the tonnage and number of vessels stood as follows:

		Tonnage.
1873—American vessels ent'd..	11,073	3,609,420
Foreign vessels ent'd....	19,655	7,831,577
American vessels cl'd....	11,227	3,743,497
Foreign vessels cl'd.....	19,875	7,875,011
1874—American vessels ent'd..	11,808	3,877,634
Foreign vessels ent'd....	21,023	9,147,504
American vessels cl'd....	12,032	3,984,661
Foreign vessels cl'd.....	20,989	9,071,316

IMMIGRATION.

There is, in the first half of the year 1874, a slight decrease in immigration figures, as compared with those of former years, but this is due especially to the financial crisis which burst over the country in September, 1873, and prevented many immigrants already settled in America from forwarding sufficient funds to their friends and relatives to enable them to emigrate. This momentary decrease was also due to the stringent measures taken by Germany against emigration, and by disheartening advices circulated by other European governments relative to the business situation of the United States.

Some two or three thousand emigrants landed in the North American Colonies, before the arrival of the Pilgrims, but they perished miserably, except 60 of them; they had neither the faith nor the courage and persevering spirit of the Puritans. When the example of the latter had shown that colonization and emigration could be successful in America, a number of Germans came over, and settled in Pennsylvania, at the end of the 17th and in the beginning of the 18th century. The Dutch settled in New York, the Swedes in Delaware, and the French in Louisiana and Canada. But the tide of emigration began in earnest in 1820, and especially in 1849. An Act of Congress, passed March 2, 1819, ordered that statistics of emigration should be kept. The total of emigrants landed from 1790 to 1817 was estimated at about 6,000; and, in 1817 alone, more than 20,000 emigrants arrived in the United States; but it was an exceptional year, and no reliable statistics were kept for the 21 months which elapsed from January 1, 1818, to September 30, 1819. From this latter date to the present time, the following table will give all information relative to emigration.

From the commencement of the Government to December 30, 1870, 7,803,865 immigrants have arrived in the United States from foreign countries. The following table, compiled from the special report of the Statistical Bureau, Treasury Department, on immigration, will show the increase during each decade since 1820:

Prior to 1820.....	250,000
From 1820 to 1830, inclusive....	151,824
" 1831 to 1840, "	599,125
" 1841 to 1850, "	1,713,251
" 1851 to 1860, "	2,598,214
" 1861 to 1870, "	2,491,451
Total.....	7,803,865

From the above it will be seen that the tide of immigration has steadily increased during each decade, with the single exception of the one beginning 1861 and ending 1870. During the War of the Rebellion immigration to this country was partially checked. The following table will show the number of immigrants arrived during each year of the decade. It will be seen that during 1862, probably the darkest period of the war, the tide of immigration reached its lowest point:

June 30, 1861.....	140,528
" 1862.....	69,449
" 1863.....	130,060
" 1864.....	193,754
" 1865.....	180,667
" 1866.....	330,704
" 1867.....	298,967
" 1868.....	282,189
" 1869.....	352,768
" 1870.....	387,203
Total.....	2,366,289

The above statement shows the number of immigrants that arrived during each fiscal year, whereas the first statement given of the total arrivals since the formation of the Government shows the number during the decade by calendar years. This will account for the apparent difference in the totals for the same decade in the two statements.

The British Isles have furnished nearly one-half of all the immigrants. England, since the formation of the Government, has sent 516,192; Ireland, 2,900,493; Scotland, 84,623; Wales, 12,435; Great Britain, not specified, 544,107; or a total of 3,857,850 from the British Isles. Germany has sent 2,267,500; Prussia, 100,983; omitting those that became paupers or criminals, or through idleness have turned out non-producers, we may safely estimate the capital value of our foreign immigration during 1870, at $200,000,000. As a subject of peculiar interest, and in order to remove the impression entertained by many that the large majority of immigrants arriving in this country are without a trade or profession, we append a carefully prepared statement of the occupations of those who arrived in the United States during the fiscal year ended June 30, 1870:

Professional Callings.

Actors	4	Physicians	252
Chemists	43	Priests	10
Clergymen	285	Reporters	2
Dentists	3	Surgeon	1
Engineers	551	Surveyor	1
Farriers	7	Teachers	493
Lawyers	77	Professions not stated	131
Musicians	289		
Naturalists	3	Total	2,132

Artists.

Architects	3	Photographers	3
Carver	1	Artists not stated	190
Engraver	1		
Image-maker	1	Total	200
Lithographer	1		

Skilled Workmen.

Bakers	900	Masons	2,190
Barbers	21	Millers	258
Blacksmiths	2,378	Milliners	17
Block-makers	3	Millwrights	4
Boiler-makers	3	Miners	4,763
Bookbinders	10	Moulders	2
Braziers	3	Nail-makers	19
Brewers	362	Painters	753
Brick-makers	3	Pilot	1
Butchers	727	Plumbers	7
Cabinet-makers	6	Potters	8
Carpenters	4,421	Printers	180
Caulkers	6	Puddlers	2
Chandler	1	Rope-makers	3
Cigar-makers	228	Saddlers	167
Confectioners	6	Sail-makers	12
Coopers	101	Sawyer	1
Curriers	10	Seamstresses	505
Cutlers	5	Shipwrights	9
Distillers	2	Shoe-binder	1
Divers	2	Shoemakers	1,557
Dressmakers	21	Soap-makers	2
Dyers	114	Spinners	10
File-makers	2	Stone-cutters	122
Fuller	1	Tailors	1,703
Furrier	1	Tanners	102
Gilders	3	Telegraph operator	1
Glaziers	2	Tinners	26
Gunsmiths	2	Turners	8
Hatters	58	Weavers	1,178
Hoe-maker	1	Wheelwrights	29
Instrument-maker	1	Wool-sorter	1
Iron-workers	3	Mechanics not stated	8,061
Jewellers	409		
Joiners	343	Total	31,964
Locksmiths	18		

Miscellaneous Occupations.

Agents	37	Manufacturers	94
Brokers	2	Merchants	7,073
Caterer	1	Nuns	36
Clerks	1,611	Nurses	6
Consuls	4	Officers	16
Contractors	4	Operatives	23
Cooks	73	Overseer	1
Druggists	51	Peddlers	6
Editors	3	Refugees	49
Farmers	35,656	Rentier	1
Firemen	22	Sailors	1,420
Fishermen	331	Servants	14,261
Gardeners	51	Shepherds	33
Grocers	2	Soldiers	117
Hotel-keepers	25	Stewardess	1
Hunter	1	Students	188
Interpreters	4	Teamsters	6
Jugglers	23	Travellers	15
Laborers	84,577		
Laundresses	7	Total	145,783
Lumbermen	6		

Recapitulation.

Professional callings	2,132
Artists	200
Skilled workmen	31,964
Miscellaneous occupations	145,782
Occupations not stated	190,596
Without occupation	16,529
Total	387,203

The above statement covers a single year. When we consider that this stream of immigration has been going on for years and is still increasing in volume, and that the acquisitions to our industrial interests, as shown by the table given, are not exceptional, but the rule, as proven by the experience of years, we can form a faint idea of the immense wealth that this living tide of humanity brings to our nation.

A subject of such vast importance may well command the attention of our leading statesmen. Each year has seen some improvement in the system of transportation between this country and Europe. Old abuses are gradually wearing away. Swift-sailing steamers are taking the place of the old immigrant ships, reducing the trials of the steerage from weeks to days. Better provisions, better ventilation, purer water, better accommodations, more humane treatment, are being exacted by the enlightened sentiment of the age. Yet the field for improvement is large. Abuses still exist. Vessels are overcrowded, provisions are not what they should be, ventilation is imperfect, the immigrant is still subject to deprivations and abuses that tend to injure his character and undermine his health. We have made progress in ocean reform, but the work is far from completed. The stranger who comes to our shores, bringing his muscle or talents to add to our country, has a right to be protected on his way here, to the best of the ability of the Government. This is what has been understood by Congress, which has imitated the conduct of the British Parliament, and voted laws to protect the immigrants, especially on their landing in America. Another law gave to every one of them, willing to stay at least five years, a grant of land of 160 acres. Another advance was made by the extinction of the Know-Nothing spirit, which, a few years ago, had taken hold of the minds of some Americans, who dreaded the flooding of the country by the foreigners.

In 1871, 321,350 immigrants arrived, and in 1872, 204,806.

EDUCATION.

In 1860, there were about 5,000,000 scholars in the private and public schools of the United States. This figure is sufficient to support the opinion, generally entertained throughout the world, that the United States people are one of the best, if not the best educated peoples among all nations. There are very few persons now living in the New England, Middle, and Western States who do not know how to read and write; and since the termination of the civil war, the Southern States have fairly entered into competition with their more learned brethren of the Northern section of the country. In the West, before laying the foundation of any township, two sections of public lands (each containing 640 acres) are laid aside for the exclusive support of public schools. Beside that, the Federal Government comes itself often, by other donations of public land, to the help of the States, in view of increasing their facilities for the extension of the public school system. More than fifty millions of acres had thus been distributed, for that purpose, by the Federal Government, before the census of 1860.

The regulation of all matters pertaining to education is left in America to the initiative of each State, but all of them have that general feature, so that instruction is provided by law for all persons of the school age, without any charge for tuition. Though attendance has not yet been made obligatory, there is a strong tendency toward such a regulation; and some States have already passed laws requiring parents to send their children to school during a specified period. Public schools are supported partly by funds derived from the sale of government lands, partly by voluntary taxation, and also by gifts of individuals. The whole area of the United States is divided into school districts, which number 11,350 in the single State of New York, and 167,800 for the whole country. A Board of Education and a Superintendent are appointed in the larger cities, for the purpose of directing and controlling the system of education, and in smaller cities a Board of Trustees, elected by the inhabitants, fulfil the same duty.

The school age varies in different States, ranging from four to twenty-one years, and every branch of instruction is taught. In the grammar schools, French, German, and vocal music are added to the ordinary course of studies. The pupils who enter the high schools are taught ancient languages, higher mathematics, philosophy, etc. In 1872, vocal music was taught in schools of all grades; German in schools of 76 cities, and French in those of 73 cities. In the rural districts and smaller cities, the same schools are attended by both sexes; but in larger cities boys and girls have different departments. Law does not provide for the establishment of separate schools for colored pupils; but usage has done it. Nearly every State is provided with a normal school, for the training of future teachers; these schools numbered 101 in America, in 1872, with 773 instructors and 11,778 students; still that is not sufficient to supply the demand for teachers, for 120,897 new ones are annually wanted in the United States, inasmuch as teachers do not continue in service on the average more than three years. There are annual conventions of teachers held in every State, and also an annual meeting of the National Educational Association, which is composed of the foremost teachers in every branch. The 13th annual session of that body was held in 1873; it comprises four departments: elementary, normal, superintendence, and higher education.

There are many evening schools for the accommodation of those who cannot attend the day schools. Of 141 cities having more than 10,000 inhabitants, 51 had, in 1872, 218 evening schools, with 1,350 teachers and 60,297 pupils. Of 82 cities with a population of between five and ten thousand inhabitants, 7 had 14 evening schools, with 20 teachers and 555 students; of 103 cities with a population below 5,000 inhabitants, 7 reported 9 evening schools, with 312 pupils.

Besides the public schools, there are many private institutions of learning, among which the "Séminaires," or Roman Catholic schools kept by priests, are very numerous. There are also, in the United States, about 100 collegiate institutions called Universities, but they have no feature in common with the *Universités* of Continental Europe,—they are not under the direction or patronage of the government, and many of them are purely higher denominational colleges, belonging to some sect. Harvard, Yale, Brown University, Columbia College, Cornell, and two or three others, are the only ones having some similarity to Universities, in the European meaning of the word. The only schools directly under the management or supervision of the United States Government are the Military Academy at West Point, and the Naval Academy at Annapolis, with the Artillery School of Fortress Monroe, Virginia.

The establishment by Congress of a Bureau of Education dates only from 1867. The commissioner at the head of this bureau has nothing to do with the management of schools. He is appointed only for "the purpose of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories, and of diffusing such information respecting the organization and management of school systems and methods of teaching as shall aid the people of the United States in the establishment and maintenance of efficient school systems, and otherwise promote the cause of education throughout the country."

The Annual Report of the Commissioner of Education shows that in 1872 the total school population of America was 12,828,867, and the enrolment 7,379,656. The average attendance was 4,110,525, for 28 States and 4 Territories; the number not registered in 34 States and 6 Territories reporting was 4,608,803. For 18 States and 5 Territories, there were 364,283 pupils in private schools. The number of teachers for 33 States and 7 Territories was 217,239; and the total expenditure for educational purposes was $70,891,981. 295 cities reported their school population at 2,123,889; 292 reported the number of schools at 7,917; and in 315, the number of teachers was 23,194.

The census of 1870 shows that 7,209,938 persons of from 5 to 24 years of age, that is, more than one-third of the population of school age, were receiving instruction. The total number of instructors was 221,042, of whom 93,329 were males, and 127,713 females. The total expenditure of schools was $95,402,726, of which $3,663,785 was from endowment, $61,746,039 from taxation and public funds, and $2,992,902 from other sources including tuition.

More than 17 per cent. of the adult males, and 23 per cent. of the adult females, are illiterate. But this is due to the ever-increasing flood of European immigrants, and to the ignorance of the emancipated slaves; for in those figures, the illiterate persons of foreign birth are numbered at nearly 800,000, and the colored people at nearly three millions. But the following table, compiled by the Bureau of Education from the census

of 1870, will throw more light on that important subject, which touches the national pride of the United States:

Aggregate population	38,558,371
Total population, 10 years old and over	28,238,945
Illiterate population, 10 years old and over	5,658,144
Male population, 10 years old and over	14,258,866
Illiterate males, 10 years old and over	2,603,838
Female population, 10 years old and over	13,970,079
Illiterate females, 10 years old and over	3,054,256
Percentage of total illiterates to total population of same age	20.04
Percentage of male illiterates to male population of same age	18.26
Percentage of female illiterates to female population of same age	21.87
Total population in 1870, 10–21 years old	9,692,945
Illiterate population, 10–21 years old	1,942,948
Male population, 10–21 years old	4,815,865
Illiterate males, 10–21 years old	984,741
Female population, 10–21 years old	4,877,080
Illiterate females, 10–21 years old	958,207
Percentage of illiterates, 10–21 years old, to population of same age	20.05
Percentage of male illiterates to male population, both 10–21 years old	20.05
Percentage of female illiterates to female population, both 10–21 years old	19.65
Total male adults, 1870	9,443,001
Male adult illiterates	1,619,147
Total female adults	9,092,999
Female adult illiterates	2,096,049
Percentage of male illiterate adults to total adults	17.15
Percentage of female illiterate adults to total females	23.05

One of the important features in all questions of public education is the one which more especially relates to liberal professions, or instruction given outside, and above the ordinary course of grammar and high schools. The following summary of educational institutions in the United States is reported by the Bureau of Education for 1872:

Institutions.	No.	Teachers.	Pupils.
Normal schools	101	773	11,778
Business colleges	66	263	8,451
Academies	811	4,501	98,829
Colleges	298	3,040	45,617
Institutions for superior instruction of females	175	1,617	11,288
Schools of science endowed by national grant of lands	38	411	2,971
Schools of science (including collegiate departments) not so endowed	32	313	2,443
Theological schools	108	435	3,351
Law schools	42	151	1,976
Medical schools, regular	61	607	4,887
" " eclectic	3	25	259
" " homœopathic	6	72	585
Dental "	59	58	199
Pharmaceutical schools	13	36	650
Institutions for the blind	27	513	1,856
" " deaf mutes	36	267	4,337
Reform schools	26	331	4,230
Orphan asylums	77	652	10,324

There are medical and law departments in the larger part of American Universities; but it is generally admitted that on this ground the United States are inferior to Continental Europe, where, at any rate, most of the young Americans who intend to be doctors or lawyers, go in order to become efficient in their avocations. Agricultural schools were founded in the United States in 1857, when the State Agricultural College of Michigan was opened with seven professors and a farm of 676 acres. In 1862 Congress passed an act providing for the establishment of colleges of agriculture and the mechanic arts in all the States and Territories, endowing them with about eight million acres of public lands; and nearly all the States have organized agricultural colleges, pursuant to the act of Congress. Commercial schools are yet left entirely to individual initiative, and commercial education, in a practical way, is given only in the private business colleges, so numerous in every city of the United States. There are polytechnic schools at Boston, Troy, Philadelphia, and Hoboken, in which technology and some industrial sciences are taught especially. There is not yet in the country a single veterinary school. Every country of Europe is provided with one at least. But the deficiency will soon be supplied in America, where there are more horses and cattle than in any other country in the world.

MINING.

Gold mining was, of course, the most important item in that branch of national wealth, a few years ago, after the discovery of the California golden fields. But California herself is at present richer with her agricultural than with her golden harvest; and the discovery of iron ore, of copper, and of petroleum in many regions of the United States has considerably diminished the former pre-eminence of gold-mining. Still this branch of industry was carried to the highest limits of prosperity immediately after it opened, for at that time the stock of gold was very low for the whole world, amounting only to about $175,000,000, and the yearly production hardly replaced the wear and tear.

The gold placers of North Carolina were discovered before those of the Pacific State. In 1825 a gold vein was worked in Montgomery County (North Carolina), and some other discoveries were made in Virginia, Georgia, and South Carolina; but the entire product of those States never amounted to more than about one million dollars annually. It decreased still more after the discovery of the California placers; and, at present, it is only in some out-of-the-way places in the North Carolina mountains that gold mining is still going on at a slow rate.

Everybody in the United States is familiar with the history of gold discovery and gold mining at the beginning of the California settlement. The names of Captain Sutter and of Marshall recall to American memories the most dazzling remembrances. In 1862 the Report of the Land Office Commissioner enlarged theoretically the area of the golden region of the United States, by stating that it covers 17 degrees of latitude, or a breadth of more than 1,000 miles by a length nearly the same. Still the gold district is practically large enough to have produced, in 1853, $70,000,000, that is four times as much as the total production of gold throughout the balance of the other countries of the earth. In 1862 it was estimated that Washington Territory alone would produce from the mines of Salmon River nearly $20,000,000. In Colorado the quartz gives $12 per ton, on the average, though some veins recently worked have given as much as from $20 to $500. In almost every Western State or Territory of the United States, discoveries are made as to mining prospects, and the golden crop has been valued at nearly $100,000,000, on which a primage of 10 per cent. is raised by the United States Government.

Silver mining was of very little account in America before the discovery of the Washoe mines in the Western States. This is carried on with great success.

Copper mining is more important, though almost exclusively concentrated in the Lake Superior region. As early as 1844 explorers went to ascertain whether there was really native copper to be found in the vicinity of the lake. The exploration was successful, but it was not until 1854 that the working of those copper mines fairly began. From $1,603,915, the product of these mines reached $2,679,218 in 1856. In the year following a magnificent block of native copper, weighing 500 tons, was discovered. There are some other copper mines in different parts of the United States, but their products are very small, except in Tennessee, when compared to the products of the Lake Superior district. In 1860 there were 14,432 tons of copper extracted, of a value of $3,316,516.

Iron is found in every State and Territory of the United States. In 1856 the iron furnaces produced 841,550 tons, valued at $23,148,845. In 1860 the production of pig-iron was 888,474 tons, valued at nearly $20,000,000. The rolled and otherwise manufactured iron was estimated at 406,293 tons, valued at $22,248,796, that is, an increase of 39 per cent. over the statistics of 1850; which increase was raised to 44 per cent. for the production of pig-iron. Pennsylvania is the State which took the lead in the iron manufacture.

Pennsylvania also produces the largest quantity of coal, though that article is to be found in nearly every State of the Union. In 1860 the increase in value of coal was 169 per cent. more than ten years before; in 1850 Pennsylvania produced coal valued at $5,268,351; and in 1860 it produced bituminous and anthracite coal of a total value of $14,703,433.

The same State again is the most prominent for petroleum production. Though its existence was known to the first colonists of Pennsylvania, petroleum began to be generally used in 1858, when the oil was considered as good for something else than medicine. Titusville, Venango, Oil Creek, Petrolia are at present names familiar to every American. The exportations, in 1862, were for seven months of 9,607,924 gallons, which compensate sufficiently for the decrease of whaleships, whose trade was crippled by the discovery of the so-called, at first, *Stone-oil*, from the now adopted Greek word of the same meaning, "Petroleum."

Lead mining is progressing in many States of the Republic, but on a relatively small scale, and the article produced is not exported, but almost entirely consumed at home.

The total production of native salt in the United States was of 12,376,000 bushels in 1857, and of 13,386,447 in 1860. Still the

importation of that article reached 14,000,000 bushels, so great were the necessities of agriculture.

According to the census of 1870 the mining industries stood as follows in the United States:

Establishments	7,974
Steam engines	4,133
Horse power	109,111
Water-wheels	134
Horse power	2,247
Hands employed	154,328

Of these there were:

Men above ground	66,178
Men under ground	77,221
Boys above ground	6,916
Boys under ground	4,013
Capital	$222,384,834
Wages	74,464,044
Materials	14,275,691
Products	152,598,994

NEWSPAPERS.

The first printing press in the American Colonies was established at Cambridge, Mass., in 1629; and the second was started at Philadelphia, in 1686 In New York, it was not until 1692, that Mr. Bradford established a press. The first journalist who has left a name was Benjamin Franklin, who bought, at Philadelphia, the *Universal Instructor in all Arts and Sciences*, and changed the title to the *Pennsylvania Gazette*, which he continued until 1765, when it passed into other hands. In 1810, Pennsylvania had seventy-one papers; in 1828, one hundred and twenty-eight; in 1840, one hundred and eighty-seven; in 1856, four hundred and forty-eight, of which thirty were daily.

A comparison of the newspaper press of the country, from an early day to the census year of 1870, will develop many interesting facts. The number of newspapers published in the United States in 1725 was 5; in 1775, 34; in 1801, 200; in 1810, 359; in 1726, 630; in 1828, 852; in 1830, 1,000; in 1834, 1,265; in 1840, 1,401; in 1850, 2,302. It will be seen by the foregoing that the increase in thirty years—from 1810 to 1840—was 1,042, while the increase in the last thirty years—from 1840 to 1870—was 4,470; the total number of publications reported in the census of 1870 being 5,871, or one for every 6,561 of the population.

The first attempt to establish a newspaper in the Colonies, as near as can be ascertained, was made in Boston, in 1690. It was suppressed by the Colonial Legislature upon its first appearance. In 1704, the *Boston News-Letter* was established by John Campbell. This paper was more successful, and its publication was continued for a number of years. Its size was 8 by 12 inches, and printed in pica type. In 1719 *The Boston Gazette* made its appearance, and the *American Weekly Mercurie* was started in Philadelphia the same year. In 1721 James Franklin (brother to Ben) started the fourth American newspaper at Boston, *The New England Courant*. *The New York Gazette* appeared in 1725. In 1765 the British Parliament imposed a stamp duty of one half-penny on the Colonial newspapers, which, meeting with great opposition, was removed after two years.

The first semi-weekly newspaper in the United States was started in Boston in 1788, and the first daily was started in Philadelphia in 1784. It will be seen by the foregoing that immediately after the Revolutionary war, which secured our independence as a nation, newspapers sprung up in different parts of the Union.

King James instructed the Governor of the Province of New York, in 1686, not to allow a printing press within his jurisdiction; consequently the Knickerbockers were dependent upon Massachusetts and Philadelphia until 1693. Previous to 1765 eight papers were started in the city of New York. No daily paper was issued until 1788. The first paper in the Province of New York outside the city was started in Albany in 1772. In 1810 New York State had sixty-six journals, of which fourteen were published in the city; in 1832 there were sixty-four in the city, and two hundred and fifty-eight in the State. In 1851 the press of New York State was: daily, fifty-six; other than daily, four hundred and two; total, four hundred and fifty-eight.

The first paper in New England, outside of Massachusetts, was started in Rhode Island in 1732. No newspaper was printed in Connecticut until 1755. In 1775 there were four; in 1810, eleven, all weekly; 1840, two daily and twenty-seven weekly; in 1850, eight daily, six tri- and semi-weekly, and thirty-two weekly.

The first newspaper was started in New Hampshire in 1756. In 1856 it had a total of forty-eight; three daily, two monthly, and forty-three weekly.

In 1810 there were fourteen papers in Vermont. In 1856 it had three daily and thirty-three other than daily.

In 1801 there were five papers published within the limits of Maine. In 1810, while the State of Maine was part of Massachusetts, it had eight papers. In 1856 it had seven daily and seventy other than daily.

The first paper in the Middle States, after New York and Pennsylvania, was started at Annapolis, Md., 1727. The first paper was started in Baltimore in 1773. In 1810 Maryland had twenty-one papers; in 1828, thirty-seven; in 1856, eighty-five, of which nine were daily.

In 1761 Delaware had one paper; in 1810, two; in 1828, four; in 1856 it had three semi-weekly and nine weekly.

The first regular paper in New Jersey was started in Burlington in 1777. In 1856 the State had a total of seventy-seven; seven daily and seventy other than daily.

The Governor of the Colony of Virginia, sixty-four years after its settlement, thanked God that it had no free schools or printing presses. His predecessor, in 1683, had been expressly ordered not to allow a printing press within his jurisdiction. In 1736 a newspaper was started at Williamsburg, called the *Virginia Gazette*, and was printed on a half sheet of foolscap. This paper was anti-republican, and in 1766, Thomas Jefferson and others issued an "independent paper, open to all parties, but influenced by none." This period was, as Mr. Jefferson said, "at the beginning of Revolutionary disputes." In 1765 Virginia had but one newspaper; in 1775, two; in 1810, twenty-three; in 1840, four dailies, thirty-five weeklies and twelve semi-weeklies. It had, in 1856, sixteen daily and one hundred and forty-seven other than daily.

Two papers were printed in North Carolina when the Revolutionary war commenced. In 1810, ten; in 1828, twenty; in 1856, four dailies, and ninety-one other than daily.

In 1765 there were three papers in South Carolina; in 1775, two; in 1801, ten; in 1828, twenty; in 1856, eight daily, and fifty-seven other than daily.

In 1775 Georgia had one journal; in 1810, thirteen; in 1828, eighteen; in 1840, five daily, forty-four weekly, five semi-weekly. In 1856, seven daily, and sixty-six other than daily.

The first newspaper in Tennessee was printed at Knoxville in 1793. In 1810 Tennessee had six journals; in 1828, eight; in 1856, nine daily and ninety-two other than daily.

At Natchez, in 1809, the first paper was printed in Mississippi. In 1810 Mississippi had four journals; in 1856, seventy weekly, and six semi- and tri-weekly.

The first paper published in Louisiana was in 1704. In 1810, there were ten; in 1840, eleven daily, twenty-one weekly and two semi-weekly; in 1856, twelve daily, and ninety other than daily.

In 1828 Alabama had ten papers; in 1840, twenty-eight, and in 1855, daily six, weekly eighty, and semi- and tri-weekly five.

Arkansas had two papers in 1828; nine in 1840; in 1856, one daily, twenty weekly, three semi- and tri-weekly.

In 1828 Florida had two journals; in 1840, ten; in 1856, eighteen weekly, and three semi- and tri-weekly.

In 1830 Texas had but one newspaper; in 1841, eleven; in 1856, fifty-six.

The District of Columbia had, in 1810, one daily, three tri-weekly, one semi-weekly, and one weekly. In 1856, six daily, and nineteen other than daily.

The first published in the Northwest Territory was issued at Cincinnati in 1793. In 1810 Ohio had fourteen papers; in 1828, sixty-six; in 1856, thirty-one daily, and three hundred and seventy-two other than daily.

In 1787 the first paper was printed in Kentucky. In 1810 Kentucky had seventeen journals; 1828, twenty-three; 1840, five daily, seventy-six weekly, and seven semi-weekly; in 1856, nine daily; other than daily, one hundred.

The first newspaper was printed in Indiana about the year 1800; in 1828, Indiana had seventeen papers; in 1840, seventy-three; in 1856, three daily, and one hundred and seventy-eight other than daily.

The first paper in Michigan was published at Detroit in 1810; in 1828 Michigan had two journals; in 1840, six daily and twenty-six weekly; in 1856, seven daily, and ninety-eight other than daily.

In 1840 Wisconsin had six papers; in 1854, eighty-six papers, ten of which were daily.

In 1854 Illinois had one hundred and fifty-four papers. In 1828 it had four; in 1856, seventeen daily and two hundred and twenty other than daily.

In 1828 Missouri had five journals; in

1840, six daily, twenty-four weekly, and five semi-weekly; in 1856 it had five daily, and one hundred and five other than daily.

Iowa had four weekly papers in 1840. In 1856 it had four daily, and sixty-eight other than daily.

According to the census of 1850, Minnesota had no newspaper. In 1856, she had four daily, and twenty-two other than daily.

In 1850 California had seven papers, according to the census; in 1856 there were eighteen daily and seventy-seven other than daily.

The first paper was started in Nebraska in 1854, and in Kansas about the same time or shortly after.

We have thus briefly given, so far as we have been able to gather facts, the introduction and progress of newspaper printing in the several States. To show the actual progress made up to 1780, we subjoin the following table from the census:

States and Territories.	Whole numbr.	Daily.	Circulation.	Copies issued annually.
Alabama	89	9	91,165	9,198,980
Arizona	1	....	280	14,560
Arkansas	56	3	29,830	1,824,860
California	201	33	491,903	47,472,756
Colorado	14	4	12,750	1,190,600
Connecticut	71	16	203,725	17,454,740
Dakota	3	....	1,652	85,904
Delaware	17	1	20,860	1,607,840
District of Columbia	22	3	81,400	10,092 800
Florida	23	....	10,545	649,220
Georgia	110	15	150,987	15,539,724
Idaho	6	....	2,750	200,200
Illinois	505	39	1,722,541	113,140,492
Indiana	293	20	363,542	26,964,984
Iowa	233	22	219,090	16,403,380
Kansas	97	12	96,803	9,518,176
Kentucky	89	6	197,130	18,270,160
Louisiana	92	7	84,165	13,755,690
Maine	65	7	170,690	9,867,680
Maryland	88	8	235,450	33,497,778
Massachusetts	259	21	1,692,124	129,691,266
Michigan	211	16	253,774	19,686,978
Minnesota	95	6	110,778	9,543,656
Mississippi	111	3	71,868	4,703,336
Missouri	279	21	522,866	47,980,422
Montana	10	3	19,580	2,860,600
Nebraska	42	7	31,600	3,388,500
Nevada	12	5	11,300	2,572,000
New Hampshire	51	7	173,919	7,237,588
New Jersey	122	20	205,500	18,625,740
New Mexico	5	1	1,525	137,250
New York	835	87	7,561,497	471,741,744
North Carolina	64	8	64,820	6,684,950
Ohio	395	26	1,388,367	98,548,814
Oregon	35	4	45,750	3,657,300
Pennsylvania	540	55	3,419,765	241,176,540
Rhode Island	32	6	82,050	9,781,500
South Carolina	55	5	80,900	8,901,400
Tennessee	91	13	225,952	18,300,844
Texas	112	12	55,250	4,214,800
Utah	10	3	14,250	1,578,400
Vermont	47	3	71,290	4,055,300
Virginia	114	16	143,840	13,319,578
Washington	14	1	6,785	396,500
West Virginia	59	4	54,432	4,012,400
Wisconsin	190	14	343,385	28,762,920
Wyoming	6	2	1,950	243,300
Total	5,871	574	20,842,475	1,508,548,250

Of the 5,871 periodicals, with an annual issue of 1,508,548,250 copies, 574 are daily; 107 three times a week; 115 semi-weekly; 4,295 weekly; 96 semi-monthly; 622 monthly; 13 bi-monthly; and 49 quarterly.

They are devoted to: Advertising, 79; agriculture and horticulture, 93; benevolent and secret societies, 81; commercial and financial, 142; illustrated, literary, and miscellaneous, 503; nationality, 20; politics, 4,333; religion, 407; sporting, 6; technical and professional, 207.

The foregoing table includes nothing but regularly issued periodicals, and when we add to this the immense number of books annually put out by the press of this country, the mass of reading matter becomes truly prodigious.

THE PUBLIC DEBT OF THE UNITED STATES.

Statement of November 30, 1873.

DEBT BEARING INTEREST IN COIN.

Title of Loan.	Authorizing Act.	Rate of Interest.	When Redeemable.	When Payable.
Loan of 1858	June 14, 1858	5 per cent.	After Jan. 1, 1874	
Loan of February, 1861 ('81's)	February 8, 1861	6 per cent.		Dec. 31, 1880.
Oregon War Debt	March 2, 1861	6 per cent.		July 1, 1881.
Loan of July and August, 1861 ('81's)	July 17 and August 5, 1861	6 per cent.	After June 30, 1881	
Five-twenties of 1862	February 25, 1862	6 per cent.	After May 1, 1867	May 1, 1882.
Loan of 1863 ('81's)	March 3, 1863	6 per cent.	After June 30, 1881	
Ten-forties of 1864	March 3, 1864	5 per cent.	After March 1, 1874	March 1, 1904.
Five-twenties of March, 1864	March 3, 1864	6 per cent.	After Nov. 1, 1869	Nov. 1, 1884.
Five-twenties of June, 1864	June 30, 1864	6 per cent.	After Nov. 1, 1869	Nov. 1, 1884.
Five-twenties of 1865	March 3, 1865	6 per cent.	After Nov. 1, 1870	Nov. 1, 1885.
Consols of 1865	March 3, 1865	6 per cent.	After July 1, 1870	July 1, 1885.
Consols of 1867	March 3, 1865	6 per cent.	After July 1, 1872	July 1, 1887.
Consols of 1868	March 3, 1865	6 per cent.	After July 1, 1873	July 1, 1888.
Funded Loan of 1881	July 14, 1870, and January 20, 1871	5 per cent.	After May 1, 1881	

Title of Loan.	Interest Payable.	Amount Outstanding.	Interest due and unpaid.	Accrued Interest to date.
Loan of 1858	January and July	$20,000,000	$96,950 60	$416,666 67
Loan of February, 1861 ('81's)	January and July	18,415,000	37,479 00	460,375 00
Oregon War Debt	January and July	945,000	6,734 75	23,625 00
Loan of July and August, 1861 ('81's)	January and July	189,321,350	462,011 29	4,733,033 75
Five-twenties of 1862	May and November	172,658,350	2,849,526 78	863,291 75
Loan of 1863 ('81's)	January and July	75,000,000	155,316 05	1,875,000 00
Ten-forties of 1864	March and September	194,567,300	270,852 71	2,423,091 25
Five-twenties of March, 1864	May and November	946,600	2,473 33	4,733 00
Five-twenties of June, 1864	May and November	58,081,200	314,081 94	290,406 00
Five-twenties of 1865	May and November	152,711,350	2,224,805 35	763,556 75
Consols of 1865	January and July	202,633,100	1,070,873 41	5,065,827 50
Consols of 1867	January and July	310,654,200	2,076,804 02	7,766,355 00
Consols of 1868	January and July	37,474,000	147,874 00	936,850 00
Funded Loan of 1881	February, May, etc	283,234,100	1,224,636 83	1,180,142 08
Total		$1,716,641,550	$10,940,419 46	$26,811,963 75

DEBT ON WHICH INTEREST HAS CEASED SINCE MATURITY.

Title of Loan.	When Matured.	Amount Outstandi'g.	Interest Accrued.
Old Debt	At various dates prior to January 1, 1837	$57,665 00	$64,174 81
Mexican Indemnity Stock	At various dates in 1851 and 1852	1,104 91	85 74
Loan of 1847	December 31, 1867	1,650 00	22 00
Bounty Land Scrip	July 1, 1849	3,500 00	226 60
Texan Indemnity Stock	December 31, 1864	174,000 00	9,450 00
Loan of 1860	January 1, 1871	10,000 00	625 00
Five-twenties, 1862 (called)	December 1, 1871, and at subsequent dates	19,645,600 00	174,650 62
Treasury Notes prior to 1846	At various dates from 1838 to 1844	82,575 35	2,670 76
Treasury Notes of 1846	At various dates in 1847 and 1848	6,000 00	206 00
Treasury Notes of 1847	At various dates in 1848 and 1849	950 00	57 00
Treasury Notes of 1857	At various dates in 1858 and 1859	2,000 00	108 00
Treasury Notes of 1861	March 1, 1863	3,150 00	378 00
Seven-thirties of 1861	August 19 and October 1, 1864	19,250 00	1,478 23
One-year Notes of 1863	At various dates in 1865	80,495 00	4,036 85
Two-year Notes of 1863	At various dates in 1866	55,600 00	3,755 92
Compound-interest Notes	June 10, 1867, and May 15, 1868	451,170 00	90,035 33
Seven-thirties of 1864 and 1865	August 15, 1867, June 15 and July 15, 1868	263,300 00	21,894 97
Certificates of Indebtedness	At various dates in 1866	5,000 00	213 48
Temporary Loan	October 15, 1866	78,560 00	7,348 80
Three per cent. certificates (called)	February 28, 1873	5,000 00	394 31
Aggregate of debt on which interest has ceased		$20,946,570 26	$381,867 42

DEBT BEARING INTEREST IN LAWFUL MONEY.

Title of Loan.	Rate.	When Payable.	Interest Pay'ble.	Amount.	Past due Int.	Accr'd Int.
Navy Pension Fund	3 per ct.	Interest applied to pensions.	Jan. and July	$14,000,000		$175,000
Cert. of Indebtedness of 1870.	4 per ct.	Payable September 1, 1875.	March and Sept.	678,000	$40 00	6,780
Aggregate of debt bearing interest in lawful money				$14,678,000	$40 00	$181,780

DEBT BEARING NO INTEREST.

Title of Loan.	Authorizing Acts.	Amount.
Old Demand Notes	July 17, 1861, and February 12, 1862	$79,667 50
Legal Tender Notes	February 25, 1862, July 11, 1862, and March 3, 1863	356,922,018 00
Certificates of Deposit	June 8, 1872 (Clearing-House Certificates)	20,150,000 00
Fractional Currency	July 17, 1862, March 3, 1863, and June 30, 1864	48,041,349 95
Coin Certificates	March 3, 1863	30,220,600 00
Unclaimed Interest		22,664 84
Aggregate of debt bearing no interest		$465,456,200 29

RECAPITULATION.

Description of Debt.		Amount.
Debt bearing interest in coin	Bonds at 6 per cent	$1,218,840,150 00
	Bonds at 5 per cent	497,801,400 00
Debt bearing currency interest	Certificates of indebtedness at 4 per cent	678 000 00
	Navy Pension Fund at 3 per cent	14,000 000 00
Debt on which interest has ceased		20,946 570 26
Debt bearing no interest	Old Demand and Legal Tender Notes	357,001,685 50
	Certificates of Deposit	20,150,000 00
	Fractional Currency	48,041,349 95
	Coin Certificates	30,220,600 00
Total principal of debt		$2,217,679,755 71
Add interest unpaid and accrued		38,338,725 47
Total debt		$2,256,018,481 18
Cash in the Treasury—Coin	$83,709,987 44	
Currency	1,296,440 28	
Special deposit for redemption of certificates of deposit	20,150,000 00	105,156,427 72
Debt, less cash in the Treasury, December 1, 1873		$2,150,862,053 46
Debt, less cash in the Treasury, November 1, 1873		2,141,833,476 62
Increase of debt during the past month		$9,028,576 84
Decrease of debt since December 1, 1872		$9,705,976 86

This final settlement is very little altered by the last five per cent. loan issued in July, 1874, by Secretary Bristow, and taken by the foreign bankers.

The statement of the Public Debt would not be complete without a parallel statement of the gold premium, which had such a great influence in the financial affairs of the country.

PUBLIC DEBT.

In order to form a right idea of the extent of the Public Debt of the United States, and how it was formed, during the past few years, it is necessary to compare the figures of 1873 with those of the Debt under the different administrations.

The Public Debt, at the close of each administration, was:

Washington (first term) ending 1793	$80,352,634 04
——— (second term)	82,064,479 33
John Adams	83,038,050 80
Jefferson (first term)	82,312,150 50
——— (second term)	57,023,192 09
Madison (first term)	55,962,827 57
——— (second term)	123,491,965 16
Monroe (first term)	89,987,427 66
——— (second term)	83,788,432 71
John Quincy Adams	58,421,413 67
Jackson (first term)	7,001,698 83
——— (second term)	3,308,124 07
Van Buren	13,594,480 73
Tyler	15,925,303 01
Polk	63,061,858 69
Fillmore	59,803,117 70
Pierce	28,699,831 85
Buchanan	90,580,873 72
Lincoln	2,680,647,869 74
Johnson	2,588,452,213 94
Debt, less cash in Treasury, March 1, 1873	2,157,380,700.53

The outstanding of the public debt of the United States, since the end of the civil war, on the 1st of July of each year, is shown as follows by the report of the Secretary of the Treasury, December 4, 1871, and public debt statement of same, July 1, 1872:

1865	$2,680,647,869 74
1866	2,773,236,173 69
1867	2,678,126,103 87
1868	2,611,687,841 19
1869	2,588,451,213 94
1870	2,480,672,427 81
1871	2,353,211,332 32
1872	2,253,251,328 78

The preceding tables, which are a correct statement of the Public Debt, as appears from the books and Treasurer's returns in the Department of Treasury, November 30, 1873, will show the details of the Debt, and how it was and will be paid.

The following table shows the lowest and highest prices of gold at New York for each month in the last twelve years. The left-hand column in each year shows the lowest price, and the right-hand column the highest:

Date.	1862.		1863.		1864.		1865.	
January	par	105	134	160¾	151⅛	160	197⅛	234⅛

In August, 1874, the price of gold fluctuated between 109 and 110½.

RAILROADS.

There is not a country in the whole world which has made such progress in building railroads as the United States. Long ago the iron horse was heard snorting from every city to the smallest village, in New England, in the Middle States, and on the Western prairies; but the Southern States were systematically opposed to building railroads in their midst. At present, although, the more Southern States are not yet as much interwoven with railways as the North and West, it can be safely asserted that the network of the railroad system in the whole country has reached perfection, as to the principal lines. The prediction, uttered years ago, that New York would be connected with San Francisco by a railroad, which would become the great route from Europe to China and Japan, is fulfilled, and the Pacific Railroad already looks as a thing of the past, and other similar lines are thought of. Tea comes now from Shanghai, and silk from Yokohama, and they reach London or Paris by way of the iron belt, which has scaled the Rocky Mountains. At the time we are writing, August, 1874, the Italian Minister Plenipotentiary and Envoy Extraordinary acredited to Japan has arrived from France, on his way to the Far East, from Italy, via New York and San Francisco, instead of via Suez, or the Peninsular Oriental Company steamships.

Still, it must not be thought that the infancy of railroad building was too rapid, or without difficulties, even in America, where so many advantages paved for them the way to success. Railroads for the transport of stone and coal came into operation in Massachusetts, Rhode Island, and Pennsylvania in 1826 and 1827, and increased in number for general traffic up to 1848, when 6,000 miles of railroad were completed throughout the States. Since that stage in their history, they have considerably increased, and been pushed to great distances towards the interior. In 1853 the length of railways in actual operation in the United States was 14,494 miles, nearly one-half of which was in the New England States, and in the State of New York. The number of railroads in these States, and also in Pennsylvania, surprised every traveller from Europe. They were seen radiating in several directions from every city, interlining and crossing and sending out branches, so as to bring every seat of population of any importance into ready communication with the chief marts of commerce. In Massachusetts alone, in the early part of 1853, there were about 1,200 miles of railway. At the same period, New York had 2,123 miles; Pennsylvania, 1,244 miles; and Ohio, which was by comparison a newly settled State, 1,385 miles. Large extensions were made in all; and the entire railway system of the United States two years afterward comprehended nearly 18,000 miles, with several thousand miles in course of construction. The principle pursued in organizing this marvellous system of transportation has been, in the first place, to rest satisfied with single lines until the resources of a district were so far opened up, and capital thereby created, as to warrant the construction of double tracks. Only a few had attained the dignity of double lines. Therefore American railways were almost all only single tracks, and did not admit of trains passing each other, except at appointed stations.

Of the considerable railway enterprises of the country, the first which appears to have been commenced was a portion of the now Baltimore and Ohio Railroad, the first stone of which was laid on the 4th of July, 1828. This road, was originally planned for a horse track only; but the introduction of steam locomotives from England encouraged the attempt to run them on the line; and in 1830 a small engine, constructed at Baltimore, was put upon the road. Although the traffic was great, the engine appears to have been only partially worked, the trains having also been moved by horses.

This road was constructed of longitudinal rails pinned down to wooden or cross-stone ties, imbedded in the ground; and upon the rails were fastened flat bars of iron, ½ inch and ⅝ inch thick, and 2½ to 4¼ inches wide, by spikes, heads countersunk in the iron. This method, which was generally adopted upon the early American railroads, from considerations of economy, and with a view of extending the lines to the utmost limit of the capital provided, was soon found to involve great danger and consequent expense. The ends of the rails became loose; and, starting up, were occasionally caught by the wheels, and thrust up through the bottoms of the cars. It was found necessary to run the trains with great caution upon the roads thus constructed, and the passenger traffic was seriously diverted from those lines that acquired a notoriety for snake-heads.

In 1830 the "Hudson and Mohawk Railroad," from Albany to Schenectady, was commenced. In October, 1831, the number of passengers on it was stated at 387 a day, and in 1832 a locomotive "with a load of eight tons, travelled on it at the rate of thirty miles an hour." "In 1831, twelve different railroad companies were incorporated;" and "from this time railroad enterprises were multiplied with great rapidity."

In Pennsylvania, it is stated, sixty-seven railroads were in operation in 1833; and in that year were commenced the most important lines of Massachusetts and New Jersey.

The outlay upon the American lines has

been from £8,700 up to £15,000 per mile, whilst the average cost in Great Britain has been nearly £40,000 per mile.

In 1838 there were only 1,843 miles of railroad in the United States; in 1848, 6,491, and in 1860, 31,185 miles. Most of those railways were originally *single track* lines. But soon the necessities of traffic compelled the companies to lay double tracks; in 1860 the relation of every State, as to railroads, was as follows:

NUMBER OF MILES OPEN IN EACH STATE.

State.	Miles Open.
Ohio	3057
Pennsylvania	2943
Illinois	2925
New York	2809
Indiana	2058
Virginia	1805
Georgia	1401
Massachusetts	1314
Tennessee	1283
South Carolina	978
Wisconsin	937
North Carolina	887
Missouri	813
Michigan	807
Mississippi	798
New Jersey	627
New Hampshire	658
Alabama	643
Connecticut	608
Vermont	575
Iowa	549
Kentucky	531
Maine	476
Maryland	406
Louisiana	328
Florida	326
Texas	294
Delaware	137
Rhode Island	104
California	70
Arkansas	38

This table will illustrate the extent to which railway enterprise has been developed in the North-Western States, especially in Ohio, Illinois, and Indiana. The Illinois Central Railroad, which passes through 706 miles of that State, was endowed with alternate sections of land for a width of three miles on each side of its track, the State reserving each other section It thus acquired 2,595,000 acres in an excellent farming region; and from the sale of these lands the expenses of construction, etc., have been or will be met. The effect of this policy in the development of the State has already been referred to.

Remarkable as has been the rapidity with which the American railroads have been constructed, and great as is the total mileage already made, the railroad accommodation of the United States is not to be regarded as by any means meeting the requirements of the country. The rapid growth of the system has only been co-equal with the rapid growth of the population; the extent of mileage is attributable to the vast extent of territory settled, and the great distances between the seats of population.

In many parts of the States, indeed, the existing railways are quite insufficient. In the South, the system is very imperfectly developed. Whilst slaves existed, there was a determined hostility in the Southern States to the expansion of any general railway system, arising from the apprehension that it would be used for the escape of slaves. Any one who glances at a railroad map of the United States will observe, that whilst the Northern States are covered with lines, the Southern have only a few main trunk roads, and that the greatest care has been taken to prevent those lines from communicating with the Free States. It will be necessary to correct all this, and to bring the South into much more intimate communication with the North than she stands at present.

From West to East, also, the present railways are quite insufficient for the growing traffic. The lines of communication from the West by canal, etc., which existed previously to railways, have not been affected by their construction. The produce of the Western States has, in fact, increased faster than the means of transport, and additional facilities for the conveyance of goods were early and urgently required. It was of the utmost importance to the development of the West, that no time should be lost in making this additional provision.

Another extension of the railway system was felt by all the people of the United States to be most essential. Every one appreciated the importance of establishing railway intercourse across the continent from the shores of the Atlantic to those of the Pacific. Four different routes had been projected in different parts of the Continent, and eventually, there can be little doubt they will all be made; only one is at present constructed. The great object, of course, was to connect San Francisco with New York.

The construction of that stupendous road progressed with a rapidity which astonished the world, and the through connection by rail, between New York and San Francisco, was established, at the time appointed, 1869. The Federal Government came to the help of the States and of private enterprise. The amount of this help is shown in the following table:

CURRENCY BONDS ISSUED TO THE PACIFIC RAILROADS.

(Not Included in the Public Debt as above stated.)

Name of Railroad.	Authorizing Acts.	R te of Int.	When Payable.	Interest Payable.
Central Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July
Kansas Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July
Union Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July
Central Branch, U. Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July
Western Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July
Sioux City and Pacific	July 1, '62 & July 2, '64	6 per cent.	30 yrs. fm. date.	January & July

Name of Railroad.	Principal Outstanding.	Interest accrued & not yet paid.	Interest paid by United States.	Int. repaid by trans. mails, &c.	Bal. of Int. paid by U. States.
Central Pacific	$25,885,120	$647,128 00	$7,921,483 27	$732,295 40	$7,189,187 87
Kansas Pacific	6,303,000	157,575 00	2,347,533 09	1,173,682 45	1,173,850 64
Union Pacific	27,236,512	680,912 80	8,615,943 21	2,601,483 02	6,014,460 19
Central Branch, U. Pacific	1,600 000	40,000 00	589,808 26	21,893 27	567,914 99
Western Pacific	1.970 560	49,264 00	485,912 94	9,367 00	476,545 94
Sioux City and Pacific	1,628 320	40,708 00	487,305 49	6,731 89	480,573 60
Totals	$64,623,512	$1,615,587 80	$20,447,986 26	$4,545,453 03	$15,902,533 23

The foregoing is a correct statement of the Public Debt, as appears from the books and Treasurer's Returns in the Department at the close of business, November 30, 1873.

In January, 1861, the capital invested for the "*cost and equipments*" of the 31,168 miles of railroads constructed in America amounted to $1,177,994,828. The cost of *maintenance* of American railroads is much higher than in England. This explains the fact that while the English roads exhibit an extraordinary amount of first cost, on account of damages paid to landowners, it does not appear that the general expenditures have been in much larger proportion than in the United States.

To end with this important subject of railroads, and to sum up, in a few lines, all the explanations and observations given above, as well as in order to give the latest data, it is only necessary to add that, commencing no longer ago than 1830 with 23 miles, the number of miles constructed up to January, 1872, was 60,852. During 1869, the mileage constructed was 4,999; in 1870, 6,145; and in 1871, 7,453; making in the three years a total of 18,597 miles. The largest mileage in any previous year was in 1856, when it reached 3,643. During the four years of our civil war but 3,273 miles were built. The State of Massachusetts has one mile of railway to 4.86 square miles of territory. A similar ratio would give to the States of New York and Pennsylvania 10,000 miles of line respectively, and to Illinois 11,000 miles, or more than twice its present mileage. The cost of railroads in this country will average $50,000 per mile—the total for the 60,852 miles being, in round numbers, $3,000,000,000. The cost of mileage constructed in 1871, at $30,000 per mile, was about $225,000,000, while at least $50,000,000 were expended in new works and equipments on old roads, making a total expenditure for the year of $275,000,000. The rapidity of the increase of business of the railroads of the United States, and the quantity and value of their gross tonnage traffic is still more remarkable than the rapid progress of these works. In 1851 the total earnings from passengers were, for 8,838 miles, $19,274,254, and from freights $20,192,100—an aggregate

of $39,466,358. In 1861 the total earnings were $130,000,000; and in 1871, $454,969,000. The tonnage of all the railroads in 1861 is estimated at 39,000,000 net tons for 31,256 miles; while, in 1871, the net tonnage was 100,000,000 tons on 60,852 miles. The net tonnage reduced to pounds of all the railroads of the country, in 1851, equalled 464 lbs. to the head of population; in 1861, 1,912 lbs.; and in 1871, 5,000 lbs. per head. The value of this tonnage per head, in 1851, equalled $35.34; in 1861, $116.92; and in 1871, $375 per head. The increase of mileage of railways constructed from 1851 to 1861 was at the rate of about 20 per cent. per annum. From 1861 to 1871 the rate of annual increase was about 10 per cent. The increase of tonnage from '51 to '61 was 50 per cent. per annum; from '61 to '71, at the rate of 23 per cent. per annum. The increase of population from '51 to '61 was at the rate of 3.5 per cent. per annum. From '61 to '71, at the rate of 2.3—10 per cent. per annum.

The cost of transporting Indian corn and wheat over ordinary highways is about 20 cents per ton per mile. At such rate the former will bear transportation only 125 miles to market, while its value is equal to 75 cents per bushel; the latter only 250 miles, while its value is $1.50 per bushel. With such highways only our most valuable cereals will have no commercial value outside of circles having radii of 125 miles and 250 miles respectively. Upon a railroad the transportation equals 1¼ cents per ton per mile, thus increasing the circle within which corn and wheat, at the prices named, will have a marketable value to radii of 1,600 and 3,200 miles respectively. The area of a circle having a radius of 125 miles is 49,987 square miles, while that of a circle drawn upon a radius of 1,600 miles is about 160 times greater, or 8,042,406 square miles. Such a difference, enormous as it is, only measures the value of the agencies at present employed in transportation, and the results achieved compared with the old.

The following table shows the mileage of railroads in the several States at the various periods noted, from January 1, 1842, to January 1, 1872:

	1842.	1845.	1848.	1851.	1854.	1857.	1860.	1863.	1866.	1869.	1872.

It thus appears that lumber constitutes over one-half of the produce brought to tidewater by the Champlain canal, and one-third of that from the Erie.

CANALS.

At the moment we are about to give a synopsis of the progress of canals in the United States, the former system of canal boating is revolutionized by the introduction of steam canal boats. This amelioration, like every other introduced hereto, in America, will work marvels, and soon supersede entirely the old system.

The first canals constructed in the United States were those of South Hadley and the Montaigue Falls, built in 1792, built by a Massachusetts company. They were, the first two miles and the second three miles long. In 1825 the Erie Canal was completed. It is 363 miles in length, and cost $7,602,000. Its width was increased to 70 feet at the level, and 42 feet at the bottom, with 7 feet depth of water, and 14 feet hauling way. During the season of 1864 the Erie Canal transported 2,300,000 tons of corn, valued at $70,000,000; the average cargo was 163 tons by each trip.

There were, in 1858, in the United States, 3,188 miles of canals, the cost of which amounted to $90,000,000. That value reached $100,000,000 in 1862 on account of the widening of the Erie and Champlain canals, and also of the extension of the Virginia and Illinois canals.

The following tables give the latest data and information relative to the carrying trade, and to the working season, of the most important canals of the United States:

1873	May 15	November 20

MANUFACTURES.

The progress of manufactures in the United States has been more than 100 per cent. greater than the increase of population, especially for the last twenty years. Thus, the total value of home-manufactured products, including the fisheries and the mining, was $1,019,206,616 in 1850. Ten years after, in 1860, it was figured at $1,900,000,000; that is an increase of about 86 per cent. in ten years, and an augmentation of 123 per cent. as compared with the increase of the white population. So every man, woman, and child in the United States produced, on an average, sixty dollars and sixty-one cents; and to this should be added the product of machinery, of an annual value below $500, for which no official statistics can be obtained.

The cotton manufacture was, and is still, one of the most, if not the most important, in the United States. It began as early as 1786 and 1788, in Massachusetts and Rhode Island. In 1800 hardly 300 bales of cotton were used, against 10,000 in 1810, and 90,000 in 1815. Nearly 100,000 operatives were employed, and $24,000,000, representing the value of 81,000,000 yards of cotton cloth, went into the coffers of the New England manufacturers. Still, the American market was glutted with foreign imported goods, and the tariff acts of 1826, 1828, and 1832, which imposed an *ad valorem* duty of 25 per cent. upon imported cotton goods, cleared the way for an astonishing progress in New England manufactures. The first cotton-mill was erected in 1822, at Lowell, and soon the Lawrence mills were built; and instead of the 240 cotton factories in the United States in 1810, there were 1,240 mills in 1840, with 2,284,631 spindles, and 129 dyeing and printing establishments. All these employed 72,119 hands, and produced goods valued at $46,350,430, with an invested capital of $51,102,359. The protective tariff of 1842 contributed again to the increase of cotton manufacture in America, and then the Southern States began to build the first regular mill south of the Delaware River. This Southern manufacture progressed well until the beginning of the civil war, though its strides could not bear comparison with the advance of the Northern manufacturers. Between the years 1840 and 1850 the product in the South was about $1 per head of the population, a larger ratio than that of the North in 1820, at a time, though, when cotton machinery was quite in its infancy. In 1859 the Southern spinners consumed 98,000 bales of cotton, that is an increase of 50 per cent. over the quantity used in 1850. But in that year, 1859, the Saluda Mills, and the other factories erected afterwards in the real Southern States, were not in operation, so that the principal part of the manufacturing was done in Maryland, at Ellicott's Mills, or in some other northward Southern State.

In 1850 there were 1,074 cotton mills in America. These mills were larger, had a more improved machinery, and consumed 641,240 bales, of 400 pounds, of cotton each, and manufactured goods amounting in value to $65,501,687. Out of the 1,074 factories, 213 belonged to the South and West. In 1860 the number of mills had declined still more, but the production kept increasing, and reached a value of $115,237,926. Then, out of the 915 factories remaining in America, and every one of them in a high state of prosperity, and on a high scale of efficiency, 194 belonged to the Southern and Western States, and the balance to Northern States. From 1860 to 1870 the same decrease in the number of factories, and the same increase in manufacturing, was noticeable; the falling off in the number of establishments during the decade was of 12⅝; but the number of looms was 24½ per cent., and the number of spindles more than 28 per cent. greater in 1870 than in 1860. The capital employed increased also 30 per cent., and the increase amounted to about 43 per cent.

From 1860 to 1870 there was also a decrease in the quantity of raw cotton consumed, amounting to nearly 25,000,000 pounds, or 6 per cent.; still higher prices increased the value of manufactured goods to nearly $55,000,000, or more than 94 per cent. The same increase was to be observed in the total cost of labor and raw material, amounting to about $70,000,000, or 85 per cent. The value of the goods was increased also, to the figure of $62,000,000, about 53 per cent. more in 1870 than in 1860. Through recently adopted improvements in machinery, a greater quantity of goods has been produced from a smaller amount of raw material. There was also not only a great saving in the improvement of machinery, but an increase of operatives, amounting to 13,000 hands. The annual wages went up also, from $196 in 1860 to $288 per head in 1870, an increase of $92 or 47 per cent. Each hand produced, of course, more in 1870, that is, $1,341 against $948 in 1860, an increase in value of $363 per head, or 38½ per cent.

The woollen manufactories were of small account in the United States until the year 1820, when they produced a value of $4,418,068. In 1830, $14,528,166; in 1840, $20,696,699, and more than 21,000 workmen were employed. In 1850 the carpet industry was introduced, and American weavers produced as good articles as foreign. The woollen manufacture rose in value to $41,588,033, which figure does not include goods in which cotton was mixed with wool. In 1860 the number of woollen mills decreased under the operation of the same economical laws which had caused a decrease in the cotton factories. There were in that year 638 woollen mills less than ten years before, but the value of the products reached $68,865,963. In 1870 the increase was enormous, and reached $155,405,058 as the value of the woollen products of the United States.

The iron manufacture continually increased in the United States, and kept pace with the newly discovered ore mines of the West, and the coal mines also. There is hardly a single country in the world which can produce ore of as good quality as the American; and there are no countries, even without excepting England, in which industrial fabrication has been more improved than the United States. With ore at discretion, as at Pilot Knob Mountain, in Missouri, with the unexhausted coal-beds of Pennsylvania, and with the inventive genius of American workmen applied to puddling and blasting furnaces, it was next to impossible that the manufacture of iron should not become one of the most prosperous industries of the land. In 1830 there were 239 furnaces in operation, making 191,536 tons, valued at $13,326,769, and employing 29,254 workmen. Seven years later the number of tons had risen to 250,000. In 1850 the State of Pennsylvania alone produced 564,575 tons of pig-iron. In 1856 the whole iron production was 841,550 tons, of which 812,917 was pig-iron; more than 60,000 people were employed in that industry, the value of which was more than $50,000,000. The importation into the United States of crude iron was nearly half a million tons, so that the native amount of iron produced in the furnaces of the United States was 1,950,548 tons.

In 1860, the production of pig iron reached 902,316 tons, valued at $46,117,550, besides this 395,536 tons of rolled iron were produced, having a value of $21,710,681; which gives a grand total for pig and rolled or manufactured iron of $67,828,231.

Leather manufactories numbered 6,528, in 1850, throughout the United States, and gave employment to 22,575 workmen; the value of such products was nearly 38 millions of dollars. For the year ending June 30, 1860, the leather manufacture had increased nearly one hundred per cent., but in 1850 the fabrication alone of boots and shoes amounted to nearly $54,000,000, and the saddlery to nearly 10 millions. The Northern States, and especially Massachusetts, were the largest manufacturers of shoes and boots; for the Lynn and Boston manufactories were the almost exclusive marts for the sale of these articles to the Southern States. The introduction of Coolie labor, the increase exacted by white workmen, the rules imposed on bosses by the Crispin association, drove from Massachusetts and New England, a small part of their monopoly in this trade. Still, in 1859, the port of Boston alone exported shoes to the amount shown by the table below, which gives an interesting view of the trade carried on between New England and the South before the abolition of slavery:

CASES OF SHOES EXPORTED FROM BOSTON, 1859.

" All others					228,307
Total cases	216,836	136,612	260,329	106,714	717,991

The decline in the quantities shipped in the fourth quarter is very marked. The total value sent South directly in that year was about $12,000,000; but a large portion of those cases that were sent to New York and Philadelphia were to supply the Southern market; at least half the whole quantity was taken South, and the returns of the last quarter of the year show a decline of 154,615 cases; and the depression in the shoe trade, leading to the great strike, resulted from the diminished business.

Agricultural implements were manufactured, in 1850, on a large scale in the United States, which have, at present, almost the monopoly of that article for the world. In 1860, the value of agricultural tools and machinery manufactured in the United States was nearly three times as great as their value in 1850, when they amounted to nearly 7 million dollars, while, ten years after, they were valued at nearly 19 millions. The States of New York, Ohio, and Indiana took the lead in that kind of manufacture. In 1860, agricultural steam implements alone in the United States, reached more than $46,000,000 in value.

In 1850, the production of flour was rated in value at $136,056,736, and it employed nearly 24,000 people. In 1860, another advance was made, and the flour manufactured in the United States realized $221,000,000.

The same increase was observable from 1850 to 1860, in the timber trade and sawing mill industry. The products of this nature were valued at nearly $59,000,000 in 1850, at $93,651,000 in 1860.

Of a grand total of 2,707,421 individuals engaged in manufactures, mechanical and mining industries, we copy from the census of 1870 the numbers of those engaged in the most special and important branches: 3,811 agricultural implement-makers, including 25 females; 1,169 artificial flower-makers (951 females); 15,302 apprentices, not specified (200 females); 27,680 bakers; 3,297 basket-makers; 141,774 blacksmiths; 9,104 bookbinders and finishers; 171,127 boot and shoe-makers (9,642 females); 11,246 brewers; 20,070 brick and tile-makers; 7,511 builders and contractors; 42,835 cabinet-makers; 344,596 carpenters and joiners; 15,669 carpet-makers; 42,464 carriage and wagon-makers (32 females); 3,834 charcoal and lime-burners (5 females); 3,534 cheese-makers; 28,286 cigar-makers (1,844 female); 1,779 clock-makers; 693 comb-makers; 41,789 coopers; 111,606 cotton mill operatives (64,398 females); 28,702 curriers, tanners and finishers (60 females); 7,558 daguerreotypists and photographists; 2,874 distillers and rectifiers; 20,242 employés in manufacturing establishments (not specified); 34,233 engineers and firemen; 4,266 engravers; 27,106 fishermen and oystermen (35 females); 9,518 glass-works operators; 18,508 gold and silver workers; 8,184 gun and locksmiths; 33,817 harness and saddle-makers (50 females); 12,625 hat and cap makers; 962 hoop-skirt makers; 22,141 iron and steel works operatives (not specified); 34,245 iron foundry operatives; 17,249 iron and steel rolling mill operatives; 17,752 lumbermen and raftsmen; 54,755 machinists; 42,877 manufacturers; 25,831 marble cutters; 89,710 masons, brick and stone; 41,582 millers (239 females); 92,084 milliners, dress and mantua makers (1,604 male); 152,107 miners (46 females); 164 needle-makers; 3,803 oil well operators; 85,123 painters and varnishers; 12,469 paper-mill operatives; 2,535 piano-forte makers; 23,577 plasterers; 11,143 plumbers and gas-fitters; 5,060 potters; 575 powder-makers; 39,860 printers (1,495 females); 47,298 saw-mill operatives (35 females); 3,881 sewing-machine factory operatives; 15,900 ship-carpenters; 161,820 tailors, tailoresses and seamstresses (97,207 females); 30,524 tinners (17 females); 20,942 wheelwrights; 8,388 wood-choppers; 7,947 wood-turners and carvers (44 females); and 58,836 woollen-mill operatives (22,776 females).

The following figures give the latest and most complete information as to the actual status of manufactures in the United States:

Manufacturing establishments, number	252,148
Steam-engines, horse-power	1,215,711
" number	40,191
Water-wheels, horse-power	1,130,431
" number	51,018
Hands employed, total number	2,053,996
Males above 16	1,615,598
Females above 15	323,770
Youth	114,628
Capital	$2,118,288,769
Wages	775,584,343
Materials	2,488,427,242
Products	4,232,325,442

In the grand totals, the most important *mechanical and manufacturing industries* figure as follows:

Establishments for agricultural implements number	2,076
Blacksmithing	26,364
Boots and shoes	23,428
Bread, crackers, etc	3,550
Brick	3,114
Carpentering and building	17,142

A NARRATIVE

OF THE INDIAN WARS

IN NEW ENGLAND,

BY WILLIAM HUBBARD, A. M.

PREFACE.

THE gracious hand of divine Providence in the preservation of the New England colonies in their infant state, gloriously appears from the facts, briefly, but faithfully transmitted down to us, by one of our venerable forefathers in the following narrative of the troubles with the Indians in New England, a very numerous and barbarous people, dispersed through the wilderness in every part of the land.

These savages began a war with the first English adventurers, while they were few in number, yea very few, and strangers in the land. This rendered their deliverance an event truly great and memorable.

They were saved indeed as by fire: Their loss of men and substance, compared with their numbers and ability, was very great, and long severely felt.

Heavy as the public expenses were to support the war, these were but a very inconsiderable part of the burdens and charges to which particular towns, families and individuals were necessarily subjected, in guards, garrisons, and watchings in their own defence.

The whole country was the seat of war, and every man procured his bread in jeopardy of his life.

Like Nehemiah's builders, each one toiled with his weapon of war in one hand, and his instrument of labour in the other; exposed every moment to death, from a watchful unseen foe.

In the frequent alarms which spread from town to town, some escaping from danger, ran into greater: others met their own fate in their attempts to relieve their neighbours, in the same, or different scattered settlements.

This was the deplorable state of the New England colonies, a very few towns excepted; a distress, more easily conceived than expressed, and indeed scarcely conceivable by the greater part of the present generation, since the then hideous wilderness is become a fruitful field, and well settled towns overspread the land.

The reader unacquainted with this country in its uncultivated state, may here inquire, Why the first settlers thus exposed themselves, by making disjoined and very distant settlements? Necessity led to this: The lands near the sea coasts were generally less fertile and found hard to subdue: therefore, for present subsistence in their feeble condition, they were obliged to seek the borders of rivers and streams, for the sake of intervals and meadows, both on account of their fertility, and of their being open and prepared for immediate improvement.

They were also encouraged in making these scattered settlements by the general friendly disposition of the natives, who freely sold their lands, for which a valuable consideration was paid, without exception, where a claim was made.

The Indians perceived their interest in admitting their English neighbours, as they furnished them with means of much easier subsistence; and the utmost care was taken by the several governments of the united colonies, to prevent any occasion of distrust.

The Pequod war was confined to the westerly parts of Connecticut.*

Philip's war, as it is called, began in Plymouth colony,† but spread through Massachusetts, New Hampshire, and Province of Maine, in extent above 300 miles. And within the compass of one year, the numerous tribes of savages within the limits of New England, were drawn into this war against us, a very few excepted.

Surely we may say, had not the Lord been on our side, when men thus rose up against us, they had quickly swallowed us up.

Our fathers indeed had come out of great tribulation, into this wilderness, which, under providence, was a means of improving them in faith, fortitude and patience, to endure hardships beyond a parallel, until they obtained deliverance: And some of the first adventurers lived to see the wilderness become a fruitful field.

But this was not their intended rest: They had sublimer views; They looked for another and better country, that is an heavenly. And however they may have been misrepresented, by ignorant or ill designing persons, they were men of whom the world was not worthy.

The cruel charges of peculiar bigotry, and a persecuting spirit, wantonly alleged against them, are founded on facts not truly stated.

According to the natural course of things in this depraved and mutable state their descendents at this day, as might be expected, have in a measure, departed from that simplicity of manners, by which their renowned ancestors were justly distinguished; But notwithstanding it may with truth be asserted, that no instance can be produced, in the present or any past age, among like numbers, where good order has so universally prevailed, as in the New England colonies, even in populous and opulent towns, especially our capital.

We of this province, with inconsiderable intermissions, from that early period, at unknown expense and loss, have been called to defend our lives and properties against the incursions of more distant savages. Our trust hath been in the name of the Lord our fathers' God and Deliverer; and hitherto he hath delivered us. May we never be unmindful of of his signal benefits!

We are now under the smiles of divine Providence increased to a multitude of people.

Our many frontier settlements are continually exposed to savage invasion: And though we trust not to our own bow; yet as prudence directs, we are all armed and prepared for a defensive war. And yet having the worm wood and the gall still in remembrance, no people more ardent, wish and pray, that wars may forever cease, and peace on earth, and good will among men universally prevail.

Boston, May 20, 1775.

CHAPTER I.

A NARRRATIVE

OF THE INDIAN WARS IN NEW ENGLAND, &c.

KNOWN unto God are all his works from the foundation of the world, though manifest to us, only by the events of time, that fruitful mother of all things, which in the former age did bring forth, at least did bring to light the knowledge of this western world, called America, that in all foregoing times and ages, lay hid in this obscure and remote region covered with a veil of ignorance, and locked up from the knowledge of all the rest of the inhabitants of the earth. To whom the honour of its investigation doth of right more properly belong, is sufficiently declared by the history and reports of such as were eye witnesses thereof and not intended to be any part of the present disquisition. The most considerable part of all the north side of America, is callel, New England. In the fertility of the said salubriousness of the air, and many other commodious advantages, most resembling the country from whence it borrowed its appellation. For the knowledge thereof the world is most beholding to the discoveries of the English, under the conduct of Sebastian Cabot, a famous Portuguese, sent out under the commission of Henry the VIIth, about the year, 1497, though since much perfected by the industry and travels of Capt. Gosnold, Capt. Hudson, Capt. Smith, and others of the English nation. North America, this posthumous birth of time, is as to its nativity, of the same standing with her two elder sisters, Peru and Mexico, yet was suffered to lie in its swadling clothes, one whole century of years, nature having promised no such dowry of rich mines of silver and gold to them that would espouse her for their own, as she did unto the other two, which possibly was the reason why she was not so hastily courted by her first discoverers, nor yet so early secured by any of the princes of Europe, lying wholly neglected as it were until a small company of planters, under the command of Captain George Popham, and Captain Gilbert, were sent over at the charge of Sir John Popham in the year 1607, to begin a colony upon a tract of land about Sagadehock, situate on the south side of the river Kennebeck and about that called Shipscot river and about twenty miles south west from Pemmaquid, the most northerly bound of all New England. But that design within two years expiring with its first founder, soon after some honourable persons of the west of England, commonly called the Council of Plymouth, being more certainly informed of several navigable rivers and commodious havens, with other places fit either for traffic or planting, newly discovered by many skilful navigators, obtained a grant by patent, under the great seal, from King James, of all that part of North America, called New England, from the 40 to the 48 deg. of north latitude. From which grant and original patent, all other charters and grants of land from Pemmaquid to Delaware bay, along the sea coast, derive their lineage and pedigree. Thus was that vast tract of land, after the year 1612, cantoned and parcelled out into many lesser divisions and parcels, according as adventurers presented, which said grants being founded upon uncertain, or false descriptions, and reports of them that travelled thither, did many of them interfere one upon another, to the great disturbance of the first planters, and prejudice of the proprietors themselves, as is too well known by any that have had occasion to stay ever so little among them, many of whom are yet surviving. For notwithstanding the great charge and vast expenses the first adventureres were at, the first proprietors of the whole Province of Maine and others, (reaching from the head of Casco Bay north east, to the mouth of Piscataqua river about sixty miles westward) and the hopes they might have conceived of being the first founders of new colonies, and of enlarging their estates and inheritances by those new acquired possessions and lordships, there was little profit reaped from thence after the rich fleeces of beaver were gleaned away, nor any great improvement made of those large portions of lands, save the erecting of some few cottages for fishermen, and a few inconsiderable buildings for the planters which were on those occasions drawn over the sea, to settle upon the most northerly part of New England.

But whether it were by the imprudence of the first adventurers, or the dissoluteness of the persons they sent over to manage their affairs, or whether for want of faithfulness or skill to manage their trust, they were by degrees in a manner quite deserted almost of law and government, and left to shift for themselves; by which means at last they fell under the jurisdiction of the Massachusetts colony, not by usurpation, as is by great mistake suggested to his majesty, but by necessity, and the earnest desire of the planters themselves; to accept of whom, those of the Massachusetts colony were the more easily induced; in that they apprehended the bounds of their own patent, by a favourable interpretation of the words describing the northern line (three miles beyond the most northerly branch of Merimac river) do reach somewhat beyond Pemmaquid, the most northerly place of all New England.

This was the first beginning of things in New England, at which time they were not unlike the times of old, when the people of Judah were said to be without a teaching priest, and without law; and no wonder things were no more successfully carried on.

In the year 1620, a company belonging to Mr. Robinson's church at Leyden, in Holland, although they had been courteously entertained by the Dutch, as strangers sojourning amongst them, yet forseeing many inconveniences like to increase, and that they could not so well provide for the good of their posterity, under the government of a foreign nation, they resolved to intreat so much favour from their own sovereign prince King James, as to grant them liberty under the shelter of of his royal authority, to place themselves in some part of New England, then newly discovered; wherefore having obtained some kind of patent or grant, for some place about Hudson's river, they set sail from Plymouth in September, for the southern parts of New England but as they intended to bend their course thitherward, *per various casus, per tot discrimina rerum*, they were at last cast upon a bosom of the Massachusetts bay, called cape Cod, about the 11th of November, from whence the winter so fast approaching, they had no opportunity to remove; and finding some encouragement from the hopefulness of the soil, and courtesy of the heathen, they resolved there to make their abode for the future which they did, laying the foundation of a new colony, which from the remembrance of the last town in England, they sailed from, they called New Plymouth; containing no very considerable tract of land scarce extending an hundred miles in length through the whole cape, and scarce half so much in breadth where it is the broadest. The first founders of that colony aiming more at religion than earthly possessions, aspiring not to any large dimension of land in their settling upon those coasts.

At Weymouth also was a plantation begun by Mr. Weston in the year 1622, but it came to little.

The north and south border of Massachusetts bay being thus planted, the middle part was the more easy to be filled up, which was thus brought about. Some gentlemen and others, observing how it fared with those of New Plymouth, were desirous upon the like ground to make the same attempt for themselves, wherefore having by a considerable sum of money purchased of some gentlemen that had a grant for the council of Plymouth all their right and interest in a plantation begun in the Massachusetts bay, and having attained a confirmation thereof by patent from King Charles, in the year 1628, they sent over a governor with several other persons to lay some foundation of another colony in the Massachusetts bay: And in the year 1630, more of the persons interested in the said patent (thence commonly called patentees) with several other persons, intended to venture their lives and all with them, transported themselves and their families into the said Massachusetts, who did in a short space of time by the accession of many hundreds, who every year flocked after them, make such an increase, that in the space of five or six years, there were twenty considerable towns built and peopled; and many of the towns first planted became so filled with inhabitants, that that like swarms of bees they were ready to swarm, not only into new plantations, but into new colonies, insomuch that in the year 1635, a new colony began to be planted upon Connecticut river, partly by combination amongst themselves, removing from some towns about the Massachusetts bay, and party by the interest of a patent purchased of that honourable gentleman, Mr. Fenwick, agent for the lord Say, and lord Brook, the lords proprietors of the said river Connecticut, at the mouth of which river they built a fort, (called after their own titles, Say Brook fort) commanding the passage of the said river. Yea, such was the confluence of people making over into those parts, that in the year 1637, a fourth colony began to be planted, bear the name of New Haven, from the first town erected therein, seated near the midway betwixt Hudson's river and that of Connecticut. The sea coast from the pitch of cape Cod, to the mouth of Connecticut river, inhabited by several nations of Indians, Wampanoogs (the first authors of the present rebellion) Narragansets, Pequods, Mohegins, as the more inland part of the country by the Nipnets (a general name for all in

land Indians betwixt the Massachusetts and Connecticut river.) The sea coast south west from Plymouth was first possessed by some discontented with the government of Massachusetts colony, from which some being exiled, others of their friends accompanying them, settled themselves upon a fair Island to the south west of cape Cod, now called Rhode Island; others settled upon the main at a place called Providence, and so by degrees planting towards Narraganset bay, made another plantation called Warwich, which places are since by patent conferred upon the inhabitants of Rhode Island; the rest of the country from Pequod river to the river Connecticut, falling within the bounds of Connecticut colony have since by patent also, been confirmed to the said colony. Things had been very prosperously and successfully carried on in all the aforesaid colonies and jurisdiction, from the year 1620, to the year 1636, at which time the war with the Pequods began. The following account was either left under the hands of such as commanded in chief, or is taken from the mouths of faithful witnesses, that were not only then present but personally concerned and engaged in the service.

There was a nation of the Indians in the southern parts of New England, called Pequods, seated on a fair navigable river, twelve miles to the eastward of the mouth of the great and famous river of Connecticut; who (as was commonly reported about the time when New England was first planted by the English) being a more fierce, cruel, and warlike people than the rest of the Indians, came down out of the more inland parts of the continent, and by force seized upon one of the goodliest places near the sea. and became a terror to all their neighbours. on whom they had exercised several acts of inhuman cruelty; insomuch that being flushed with victories over their fellow Indians, they began to thirst after the blood of any foreigners, English or Dutch, that accidentally came amongst them, in a way of trade, or upon other accounts.

In the year 1634, they treacherously and cruelly murdered Capt. Stone, and Capt. Norton, who came occasionally, with a bark into the river to trade with them. Not long after, within the compass of the next year, they in a like treacherous manner, slew one Mr. Oldham (formerly belonging to new Plymouth, but at that time an inhabitant of Massachusetts) at Block Island, a place not far from the mouth of their harbour, as he was fairly trading with them: Besides some other such like acts of perfidious cruelty towards some of the Dutch that had formerly been trading up Connecticut river; by which practices perceiving that they began to stink in the nostrils of their neighbours whose revenge they now began to fear, and not willing to to have to deal with too many enemies at once, they imitated the subtlety of the children of Ammon, when they began to stink before David; endeavouring to strengthen themselves with alliance of some of those they had formerly provoked, that by their assistance they might defend themselves against the rest, not doubting but to make their part good with their foreign enemies, if they could be reconciled to their Indian neighbours, the Narragansetts or other home-bred enemies, and could but fortify themselves by a league of friendship with any of their foreign neighbours that were newly come to plant in these parts. To this end they sent messengers with gifts to the Massachusetts in the latter end of the same year 1634; the first messengers were dismissed without an answer: But they being sensible of their own danger, and and of the great importance a peace with the English of the Massachusetts might be, pursued the business very earnestly, sending messengers a second time, who offered much Wampam (Indian's money) and beaver, with these second messengers: The governor and council of the Massachusetts had much conference many days; and at last after the best advice they could take among themselves, concluded a peace and friendship with them. upon these conditions.

1. That they should deliver up to the English those persons amongst them that were guilty of Capt. Stone's death, and the rest that were with him.

2. That if the English desired to plant in Connecticut they should give up their right to them.

3. That if the English should henceforward trade with them as their friends, which was a chief thing aimed at; the said Pequods being at that time at war with the Dutch, and the rest of their neighbours, on the reasons forementioned. To these conditions they readily agreed, and also cunningly insinuated their desire that their new confederates, the Massachusetts, should mediate a peace for them with the Narragansetts; intimating likewise their willingness that a part of the present which they promised to send should be given to them, standing so much upon their honour, that they would not be seen to give any thing themselves; such was the pride and height of spirit lodged in this company of treacherous villians, the dregs and lees of the earth, and the dross of mankind.

As for Capt. Stone's death they slily evaded the guilt of it, falsely adding that there were but two left that had any hand therein, and that it was a just quarrel wherein he was slain: For, said they, he surprised some of our men, and would by force have compelled them to shew him the way up the river, whereopon the said Stone coming ashore, with two more, was watched by nine of our men (say they) who finding them asleep in the night, slew them to deliver our own men, one of whom going afterward to the bark, it was suddenly blown up: Whereas the truth of the matter was thus.

The said Capt. Stone formerly belonging to St. Christophers in the West Indies, occasionally coming to these parts as he passed between this place and Virginia put in at that river, where the Indians after they had often been on board his vessel to trade with him, at the last came friendly on board as they used to do, but finding the capt. asleep in his cabin, took the opportunity to murder him as he lay, casting a covering over him that he might not be discerned by the rest whom they presently after dispatched one after another, all but Captain Norton who made stout resistance, for a long time defending himself in the cook room of the bark till the gunpowder which he had set in an open vessel, to be more ready for his use, accidentally took fire, by which fatal accident he was so burned, and his eyes so blinded that he could not make any longer resistance, but forthwith fell into the hands of these cruel and blood thirsty wretches, who after they had taken away his life made a prey of all that was in the vessel.

As for Mr. Oldham, he was murdered at an Island called by the Indians, Manisses (since known by the name of Block Island) but those that murdered him (probably inhabitants of said Island) fled presently to the Pequods, by whom they were sheltered, and so became also guilty themselves of his blood.

In the year 1636, the death of this Mr Oldham* was so manifest that it could neither be concealed nor excused, the discovery whereof being remarkable, is here inserted.

One John Gallop, with one man more, and two boys, coming from Connecticut, and intending to put in at Long Island, as he came from thence, being at the mouth of the harbor was forced by a sudden change of the wind to to bear up for Block Island, or Fisher's Island, where, as they were sailing along, they met with a pinnace which they found to John Oldham's, who had been sent to trade with the Pequods, (to make trial of the realty of their pretended friendship after the murder of Captain Stone they hailed the vessel, but had no answer, although they saw the deck full of Indians (14 in all) and a little before that had seen a canoe go from the vessel full of Indians likewise, and goods, whereupon they suspected they had killed John Oldham, who had only only two boys and two Narraganset Indians in his vessel besides himself, and the rather because they let slip, and set up sail (being two miles from the shore, the wind and tide coming off the shore of the Island, whereby they drove toward the main land of Narraganset) therefore they went ahead of them, and having nothing but two pieces, and two pistols, they bore up near the Indians, who stood on the deck of the vessel ready armed with guns, swords and pikes; but John Gallop, a man of stout courage, let fly among them, and so galled them, that they got all down under the hatches, and then they stood off again, and returning with a good gale, they stemmed her upon the quarter, and almost overset her, which so affrightened the Indians, as six of them leaped overboard, and were drowned, yet they durst not board her, but stood off again, and fitted their anchor, so as stemming her the second time, they bored her bow through with their anchor; and sticking fast to her, they made divers shot through the sides of her, and so raked her fore and aft (being but inch board) as they must needs kill or hurt some of the Indians; but seeing none of them come forth, they got loose from her, and then four or five more of the Indians leaped into the sea, and were likewise drowned; whereupon there being but four left in her, they boarded her; when an Indian came up and yielded; him they bound and put into the hold: then another yielded; him they also bound, but Gallop, being well acquainted with their skill to unloose one another, if they lay near together, and having no place to keep them asunder, flung him bound into the sea; then looking about, they found John Oldham under an old sail, start naked, having his head cleft to the brains; his hands and legs cut as if they had been cutting them off; yet warm:

* The account of Mr. Oldham's death is added to this edition from Mr. Hubbard's Mass. History of New England, from its beginning to 1689

so they put him into the sea; but could not well tell how to come at the other two Indians who were in a little room underneath with their swords) so they took the goods which were left, and the sails, and towed the boat away, but night coming on, and the wind rising, they were forced to turn her off, and the wind carried her to the Narraganset shore, where they left her.

On the 26th of the said July, the two Indians which were with John Oldham, and one other Indian, came from Canonicus (the chief sachem of the Narragansets) with a letter from Mr. Williams, to signify what had befallen John Oldham, and how grievously they were offended: and that Miantonimo (the second sachem of the Narragansets) was gone with 17 canoes and 200 men to take revenge. But upon examination of the other Indian, who was brought prisoner to them, they found that all the sachems of the Narragansets, except Canonicus and Miantonimo, were contrivers of John Oldham's death, and the occasion was because he went to make peace, and trade with the Pequods last year; the prisoner said also that Oldham's two Indians were acquainted with it; but because they were sent as messengers from Canonicus, they would not imprison them: but the governor wrote back to Mr. Williams, to let the Narragansets know, they expected they should send home John Oldham's two boys, and take revenge upon the Islanders, and withal gave Mr. Williams caution to look to himself, if there should be occasion to make war with the Narragansets (for Block Island was under them) and the next day he wrote to Canonicus, by one of those Indians, that he had suspicion of him that was sent, and yet he had sent him back, because he was a messenger; but did expect, if he should send for the two Indians, he should send them to him.

Four days after John Oldham's two boys were sent home by one of Miantonimo's men, with a letter from Mr. Williams, that Miantonimo had caused the sachem of Niantic to send to Block Island for them, and that he had near 100 fathom of peak, and much other goods of Oldham's which should be reserved for them. And three of the seven that were drowned were sachems, and that one of the two which was hired by the Niantic sachem, was dead also. So they wrote back to have the rest of those which were necessary to be sent, and the rest of the goods, and that he should tell Canonicus and Miantonimo that they held them innocent, but the six other sachems were guilty.

Lieut. Gibbons and Mr. Higginson were sent after, with Cushmakin the sachem of the Massachusetts, to Canonicus, to treat with him about the murder of John Oldham. They returned with acceptance and good success of their business; observing in the sachem much state, great command of his men, and marvellous wisdom in his answers; and in the carriage of the whole treaty, clearing himself and his neighbours of the murder, and offering revenge of it, yet upon very safe and wary conditions.

The English of Massachusetts, after the peace concluded with the Pequods, sent a bark thither for trade, that trial might be made of the reality of their friendship, but they found them treacherous and false, and that no advantage was to be had by any commerce with them, insomuch as they took up a resolution never more to have to do with them; which the said Indians perceiving, made no account of the former peace, but took all advantage to do us mischief, not only by harbouring those who had murdered Mr. Oldham, but surprising many of the English in the year 1636, when Connecticut river began first to planted, divers of whom were killed (nine at one time in April, 1637) by them about Wethersfield, when the plantation there first began, so as they could not pass up and down the river without a guard, but they would be in danger of being cut off or carried away, as two maids were said to be; thirty men have been killed by them in all; those who fell into their hands alive, were cruelly tortured, after a most barbarous manner, by insulting over their prisoners in a blasphemous wise, when in their dying agonies under the extremity of their pains (their flesh being first slashed with knives, and then filled with burning embers) they called upon God and Christ with gasping groans, resigning up their souls into their hands; with which words these wretched caitiffs used to mock the English afterwards, when they came within their hearing and view.

About the same time, some agents sent over by the lord Say and the lord Brook, built a fort at the mouth of Connecticut river, wherein was placed one Lieutenant Gardiner, and a convenient number of soldiers to secure the place, intended soon after to be planted, but all the winter following, being the end of the year 1636, they were little better than besieged by the said savages, not daring to stir out of the command of the fort, but they were ready to be seized by these barbarous enemies: at one time the lieutenant himself, with ten or twelve of the soldiers, marching out of the fort with intent to pass over a neck of land, to burn the marshes; as soon as they had passed over the streight of the neck, they espied a company of Indians making towards the said isthmus, which if they could not recover, they saw they must all perish; whereupon returning back with all speed, they narrowly escaped, and were two or three of them killed notwithstanding, before they could get back to the fort, which was presently surrounded with multitudes of them; but the discharging of a piece of ordnance gave them warning to keep further from the walls. Sometimes they came with their canoes into the river in view of the soldiers within the fort, and when they apprehended themselves out of the reach of their guns, they would imitate the dying groans and invocations of the poor captive, which English soldiers were forced with silent patience to bear, not being then in a capacity to requite their insolent blasphemies. But they being by these horrible outrages justly provoked to indignation, unanimously agreed to join their forces together, to root them out of the earth, with God's assistance.

The governor and council having soon after assembled the rest of the magistrates, and the ministers, to advise with them about doing justice for Oldham's death, they all agreed it should be done with all expedition; and accordingly on the 25th of August following, 80 or 90 men were sent out under the command of Capt. Endicot of Salem, who went to the Pequod country by water, with commission to treat with the said Pequods, first offering terms of peace, if they would surrender the murderers of the English, and forbear further acts of hostility, or else fight them.

The captain aforesaid coming ashore with his company, by a message sent them by an interpreter, obtained little speech with a great number of them at a distance; but after they understood what was propounded to them, first cunningly getting behind a hill, they presently ran away into the woods and swamps, where there was no pursuing of them: however, one discharging a gun among them as they were taking their flight, stayed the course of one, which was all that could be done against them at that time.

Winter approaching, and no encouragement presenting further to pursue them at that time, it was resolved better to return back for the present, and wait a further season, when more forces could be gathered together to pursue the quarrel to the utmost.

Miantonimo soon after sent a message to them with a letter from Mr. Williams, to signify that they had taken one of the Indians, who had broken prison, and had him safe for them, when they should send for him (as they had before sent to him for that end) and that the other had stolen away (not knowing it seems that he was their prisoner) and that according to their promise they would not entertain any of that Island, which should come to them; but they conceived it was rather in love to him whom they concealed, for he had been his servant formerly, but when they sent for those two Indians, one was sent them, but the other was said to be dead before the messenger came: but the Pequods harboured those of Block-Island, and therefore justly brought the revenge of the English upon them.

Amongst those soldiers that were sent under Capt. Endicot, were twenty that belonged to Saybrook-fort, land were appointed to stay there, to defend the place against the Pequods: after the said capt and the rest were departed, those twenty lay wind bound in the Pequod harbour, and in the meanwhile went all of them ashore, with sacks to fetch some of the Pequods' corn; and having fetched each man one sack full to their boat, they returned for more, and having loaded themselves the Indians set upon them, so they set down their corn, and gave fire upon the Indians, and the Indians shot their arrows against them; the place was open about the distance of a musket shot; the Indians kept the covert, save when they came forth at a time and discharged their arrows: the English put themselves in a single file, and ten only that had pieces that could reach them, shot, the others stood ready to keep them from breaking in. So they continued most part of the afternoon; the English, as they supposed, killed divers of them, and hurt others; and the Indians wounded but one of the English, who was armed, all the rest being without: for they shot their arrows compass-wise, so as they could easily see and avoid them standing single, then always gathered up their arrows: at the last the Indians being weary of the sport, gave the English leave to retire to their boat.—This was in October, 1636.

About two days after, five men of Saybrook went up the river about four miles to fetch hay out of a meadow on the Pequod side: the grass was so high as some Pequods hiding

themselves in it, set upon the English before they were aware, and took one that had hay on his back, the rest fled to their boat, one of them had five arrows in him, yet recovered: he that was taken was a goodly young man, whose name was Butterfield: whereupon the meadow was ever after called Butterfield's meadow.

Icarus Icariis nomina dedit aquis.

About fourteen days after, six of the soldiers were sent out of the fort to keep an house which they had set up in a corn-field, about two miles from the fort. Three of them went forth a fowling, which the lieutenant had strictly forbidden, two had pieces, and the third only a sword, when suddenly about an hundred Indians came out of the covert and set upon them, he who had the sword brake through, and received only two shot, and those not dangerous, and so escaped to the house which was not above a bow shot off, and persuaded the other two to follow, but they stayed still, till the Indians came and took them, and carried them away with their pieces.

Soon after they beat down the said house, and out houses, and hay stacks, and within a bow shot of the fort, killed a cow, and shot diverse others, which came with arrows sticking in them.

After Mr. Endicot's departure, the Pequods perceiving that they had by several late injuries and outrages, drawing upon themselves the hatred of all the English, as well as of their own people by former wrongs, and distrusting their own ability to deal with them all at once, did at the last by all subtle insinuations and persuasions, try to make their peace with the Narragansets, using such arguments as to right reason seemed not only pregnant to the purpose but also (if revenge, that bewitching and pleasing passion of man's mind had not blinded their eyes) most cogent and invincible: but they were, by the good providence of God, withheld from embracing those counsels, which might otherwise have proved most pernicious to the design of the English, viz. That the English were strangers, and began to overspread the country, which would soon be possessed by them to the depriving the ancient inhabitants of their right, if they were not timely prevented; and that the Narragansets would but make way for their own ruin, by helping to destroy the Pequods; for after themselves were subdued, it would not be long ere the Narragansets themselves, would in the next place be rooted out likewise: whereas if they would but join together against the English they could demonstrate how the English might easily either be destroyed or forced to leave the country, and that without any danger to themselves: telling them also that they never need come to any open battles, they might destroy them only by firing their houses, and killing their cattle, and lying in wait for them as they went about their ordinary occasions; which course, if it were pursued, they said their new and unwelcome neighbours could not long subsist; but would either be starved with hunger and cold, or forced to forsake their country.

Machiavel himself if he had sat in council with them could not have insinuated stronger reasons to have persuaded them to a peace.

It is said that so much reason was apprehended in these motives, that the Naragansets were once wavering, and were almost persuaded to have granted an ear to their advice and persuasion and joined all against the English; but when they considered what an advantage they had put into their hands by the strength and favour of the English, to take a full revenge of all their former injuries, upon their inveterate enemies, the thought of that was so sweet, that it turned the scale against all other considerations whatsoever.

Soon after this, Miantonimo, sachem of the Narragansets, came to Boston, (being sent for by the governor) with two of Canonicus's sons, and another sachem, and near 20 of their men, whom they call Sannaps. The governor, having notice by Cushamakin, the Massachusetts sachem, sent twenty musketeers to Roxbury to meet them. They came to Boston about noon, where the governor had called together all magistrates and ministers to give countenance to their proceedings, and to advise about the terms of peace. After dinner, Miantonimo declared what he had to say to them in several propositions, which were to this effect, that they had always loved the English, and now desired a firm peace with them, and that they would continue war with the Pequods, and their confederates, till they were subdued, and desired the English would do so to: Promising to deliver their enemies to them, or kill them, and two months after to send them a present. The governor told them that they should have an answer the next morning, which was done, upon articles subscribed by him, and they also subscribed with him, wherein a firm peace was concluded, but because they could not make them well understand the articles, they told them they would send a copy to Mr. Williams, who could best interpret the same to them. So after dinner they took leave, and were conveyed out of town by some musketeers, and dismissed with a volley of shot.

The Articles here follow.

I. A firm peace betwixt them and their friends on either part (if they consent) and their confederates (if they will observe the articles) and their posterity.

II. Neither part to make peace with the Pequods without the other's consent.

III. Not to harbour any of the Pequods.

IV. To put to death, or deliver up any of the murderers of the English.

V. To return fugitive servants.

VI. The English to give them notice when they got out against the Pequods, and the other to send them guides.

VII. None of them to come near the English plantations during the war with the Pequods without some Englishman or known Indian.

IX. To continue to the posterity of both parties.

These Articles were indifferently well observed by the Narragansets, till the Pequods, their mortal enemies, were totally subdued; but then they began to grow insolent and treacherous, especially this Miantonimo himself; as will appear in the sequel.

Cushmakin also, the sachem of Massachusetts, subscribed these articles with the English.

The report of the unheard of cruelties forementioned, which had been perpetrated by the Pequods filling the ears of the English throughout the country; it was agreed by the joint consent of the English throughout the three colonies to unite all their forces together for suppressing the common enemy, early in the spring, A. D. 1637, who were also moved thereunto by their own necessities as well as by the earnest request of their friends at Connecticut.

Those of Plymouth being written unto by the governor of the Massachusetts, appeared very cordially willing thereunto, to which end they agreed to send fifty men at their own charge, with as much speed as the matter required, with sufficient leaders appointed, and a bark provided to carry them provisions, and tend upon them on all occasions; but before they could be dispatched away the next spring, news was brought that the enemy was wholly routed, so as their journey was stopped, and their good will accepted for the deed; as if they really had been there to have borne their part in the service; their non-appearance in time and place being not to be imputed to any backwardness in their minds, but to their too late invitation to the service; the motion fetching a large compass from the Connecticut down to the Massachusetts; from whom in the last place they were solicited thereunto. And for the other two colonies, those of Connecticut being quickened by the spur of necessity, and present sense of the insolence daily acted at their very doors, were soonest upon their march, and by the good hand of God upon them, they had given the main stroke before the friends of the Massachusetts could come up with them, yet there was no repining for the want of the glory of the victory, nor was there any cause, those that were the chief actors therein being forward to give God the glory of the whole, and not willing to pocket up any thing thereof themselves, acknowledging that they never saw more of God, or less of man in any business of that nature, as may more fully be understood by particulars ensuing.

The colony of the Massachusetts determined to send an hundred and sixty, of whom an hundred and twenty were ordained under the conduct of Capt. Patrick of Watertown, and Capt. Trask of Salem, Capt. Stoughton of Dorchester being to command in chief; with whom was sent that holy man of God, Mr. John Wilson, (pastor of the church of Boston) the chariots and horsemen of our Israel, by whose faith and prayer, as sometimes was said of Luther, (in reference to Germany) the country was preserved, so as it was confidently believed that no enemy should break in upon a place whilst he survived, which as some have observed accordingly came to pass.

The matter requiring good expedition, and it being long before the whole company could be dispatched away, Capt. Patrick with forty men were sent beforehand, to be sure to meet with those of Connecticut in case they should be in action, before the rest of our forces could get into a readiness, which accordingly came to pass; for the main business in taking the fort was over, even before the said Patrick could get thither. Capt. Underhill was sent by Mr. Vane the governor to Saybrook the winter before to strengthen the garrison

there. The assaulting and surprising of this Indian fort being the most remarkable piece of service in that whole expedition; take it as it was delivered in writing by that valiant, faithful and prudent commander, Capt. Mason, chief in the action, who lived long after to reap the fruit of his labour, and enjoy the benefit of that day's service, having an inheritance given him in that part of the country, as a just reward of his faithful service on that day as well as at other times. Wequash, a Pequod by nation, but disgusted by the sachem, proved a good guide to the English, by whose direction they were led to a fort near Mystic river, some miles nearer than Sassacous's fort, which they first intended to assault.

On the second Wednesday of May, being the tenth day of that month, we set sail with ninety men of the English in one pink, one pinnace, and two boats, towards the Pequods, with seventy river Indians; having somewhat a long passage to Saybrook fort, about forty of our Indians desired to go down by land on Saturday, but on Monday they went forth from the fort, and meeting seven Pequods and Nianticks they slew five outright, took one prisoner, and brought him into Saybrook fort, where he was executed by Capt. Underhill, the other escaped.

On Monday we landed at Saybrook fort, and stayed there until Tuesday; Capt. Underhill joining nineteen men with himself to us: Whereupon we sent back twenty of ours to strengthen our plantations; and so set sail on Thursday towards Narraganset, and arrived there on Friday.

On Saturday, myself, with Capt. Underhill, and Lieut. Sealy, with our guard marched to Canonicus by land, being about five miles distant, where we were kindly entertained after their manner: Having had party with him, we sent to Miantonimo, who would give no present answer; and so our sabbath being on the morrow, we adjourned our meeting until Monday, at which time there assembled Miantonimo with the chiefest of them about two hundred men; and being solemnly set for consultation after their manner, told them we were now going, God assisting, to revenge the wrong committed and bloodshed by their and our enemies, upon our native countrymen, not any way desiring their aid, unless they would voluntarily send, which they did exceedingly approve of: Moreover we told them that the English and they had always been friends for aught we knew, and so were we with the Indians that had not wronged Englishmen, which they acknowledged, and so made a large description of the Pequod's country, and told us they would send men with us; so we resolved there to keep our rendezvous at Canonicus's plantation, on the morrow night, being Tuesday; but the wind being stiff, we could not land our men until five or six of the clock in the afternoon, at which time I landed on Narraganset shore with thirty-two men, and so marched to the place of rendezvous formerly appointed: Capt. Underhill and my lieut. landed the rest, and came up to me that night. About two hours before day, came an Indian with a letter from Capt. Patrick, being then at Robert Williams's plantation with forty men, who desired us to stay for his coming and joining us, not intimating when that would be: which being considered and debated, we thought it could not be our safest course to wait for him, (though his present assistance was much desired) for these reasons.

1. "Because the day before when he had absolutely resolved to go, the Indians plainly told us they tho't we were but in jest, and also that Englishmen did talk much, but not fight; nay, they concluded they would not go on; and besides, if we should defer, we feared we should be discovered by reason of the frequent recourse between them by certain squaws (who have mutual intercourse) whereupon we were constrained to set forward towards the Pequods, with seventy-seven English, and about sixty river Indians, and as I suppose near two hundred Narragansets, and marched that night to the eastern Nianticks, where we kept our rendezvous that night: the sachem of the place adding about an hundred of his men unto us.

We set forward and marched about ten miles, where making an alta (or halt) there we held a consultation with the Indians, who desired to know what we intended? We told them that we resolved to assault Sassacous's fort, at which they were all stricken and as it were amazed with fear, as they plainly confessed; after a long debate and pressing of them, taxing them with cowardice, some of them resolved to go along with us, though I supposed they had no such intention, as appeared afterward; some of them left us to the number, as I suppose of an hundred or less; and marching on five miles further, we made another alta, where they told us we had near a dozen miles to Saccacous's fort, as we gathered by their relation; we were constrained to alter our resolution, and resolved to attempt that fort, which they had formerly described to be three or four miles nearer; and also one of Capt. Underhill's men failing put it out of doubt. But whosoever saith that Capt. Underhill had any falling out about that or any thing else, doth speak an untruth; for we both resolved to attack Saccacous's fort, as we concluded in our consultation at Narraganset, and so continued our resolution till we received the former reasons as grounds sufficient to persuade us to the contrary, and to prosecute that which was most likely to be accomplished.

They drew a plot of the situation of the Pequods, and described Saccacous's fort to be the nearest, which was the chief cause we determined to assault that first, and had no reason leaning till our last alta, where, upon the reasons formerly mentioned, we changed our resolution: This greatly pleased the Indians that were with us, as it was what they much desired; for it was dreadful to them to hear the name of Sassacous.

From thence we marched two or three miles where we kept our rendezvous, supposing we had been within one mile of the fort: an Indian having been sent beforehand, brought us news that they were secure, having been fishing with many canoes at sea, and divers of them walking here and there.

About two hours before day we marched toward the fort, being weary and much spent; many of us having slept none at all.

And as we began to march towards the fort, the Lord being pleased wonderfully to assist and encourage us, after a tedious march of three or four miles: about break of day we came in fair view of the fort, standing on the top of an hill not steep; the Indians all falling back, were suddenly vanished out of sight, so we made an alta, and sent back for our guide who had promised to go with us to the fort, but his heart we saw much failed him; we asked him what they intended who promised to wing us, and to surround the fort; he told us they were much afraid; but he, seeing our resolution, went to them and prevailed with divers of them to come up to us; we told them their best course would be to flank the fort on both sides, and having no time longer to confer, we proceeded; Capt. Underhill to the western entrance with one division, myself to the eastern as silent as possibly we could: so it pleased God we came up within two rods of the palisado, before we were dicovered, at which time a dog began to bark, and an Indian cried out, but not being myself rightly informed by the Indian guide, of the right entrance, though there was a little postern door, which I had thought to have attempted to break down with my foot; but the Lord directed me otherwise for the better; for I then feared we could not there enter with our arms, which proved true. So I suddenly hasted to the palisado, and putting in the muzzle of my piece, and discharged upon them, and so did the rest with all celerity; we then suddenly hastened on toward that side which stood toward the water; where I concluded there was an entrance, and instantly fell upon it, being only barred with two forked boughs, or branches of some trees, and hastening over them, I drew one after me; my lieutenant drawing the other outward. We suddenly fell upon the wigwams; the Indians cried out on a most hideous manner, some issuing out of their wigwams, shooting at us desperately, and so creeping under beds that they had. We had resolved awhile not to have burned it, but seeing we could not come at them, I resolved to set it on fire, after divers of them were slain, and some of our men sore wounded; so entering one of their wigwams, I took a fire brand [at which time an Indian drawing an arrow had killed him, but one Davis, his sergeant cut the bowstring with his cutlass] and suddenly kindled a fire in the matts wherewith they were covered, and fell to a retreat and surrounded the fort; the fire increasing violently, insomuch that they were constrained to climb to the top of the palisado; from whence they were soon fetched down I suppose to the number of an hundred and forty. Many of them issuing forth were suddenly slain by the English or Indians, who were in a ring without us; all being dispatched and ended in the space of an hour, having two of our men slain, and sixteen wounded.

Being very hot and dry, we could very hardly procure any water, we continued there one hour not knowing what course to take or which way to go, our pinnaces not being come in, neither did we know how far or which way to go them, our interpreter, being an Indian, we could hardly come to speak with him: when we did, he knew nothing of what his countrymen intended, who were all hurried and distracted with a few hurt men, but chiefly as I conceive with fear of the enemy.

"The enemy approaching, they began to cleave unto us, and I verily think durst not leave us.

"Our pinnaces then coming in view with a

fair gale, being guided as it were to serve our necessity by the good hand of God, which I think was never more eminently seen in a matter of like moment, and less of man in several passages. Then we set our men in order, and prepared for fight, and began to march toward the harbour where the pinnaces were to ride: the enemy approaching, Capt. Underhill, with divers Indians and certain English, issued out to encounter them, but they would not stand to it, for the most part they lay behind rocks, trees and bushes. We marched on, they still dodging of us; sometimes hazarding themselves in open field, where some of them were slain in open view, and as we hear, many wounded. I was somewhat cautious in bestowing many shot upon them heedlessly, because I expected a strong opposition; and thus they continued to follow us till we came within two miles of our pinnaces, where they wholly left us, which was nearly six miles as I conceive, it being then about two miles more to the river.

"Four of our wounded men we were forced to carry ourselves, while at length we hired the Indians to bear them both in this and all the following enterprises against the Pequods."

This service being thus happily accomplished by these few hands that came from Connecticut; within a while after, the forces sent from the Massachusetts under the conduct of Capt. Stoughton as commander in chief, arrived there also, who found a great part of the work done to their hands, in the surprisal of the Pequods' fort as aforesaid, which was yet but the breaking of the nest, and unkennelling those savage wolves; for the body of them, with Sassacous the chief sachem (whose very name was a terror to all the Narragansets) were dispersed abroad all over their dispersed abroad and scattered all over their country, yet so far were the rest dismayed, that they never durst make any assault upon the English, who in several parties were scattered about in pursuit of them.

It was not long after Capt. Stoughton's soldiers came up, before news was brought of a great number of the enemy, that were discovered by the side of a river up the country, being first trappanned by the Narragansets, under pretence of securing them, but were truly hemmed in by them, though at a distance, yet so as they could not, or durst not stir, from the place, by which means our forces of the Massachusetts made an easy conquest of some hundreds of them, who were there cooped up as in a pound; not daring to fight, nor able to fly away, and so were all taken without any opposition. The men among them to the number of 30, were turned presently into Charon's ferryboat under the command of skipper Gallop, who dispatched them a little without the harbour; the females and children were disposed of according to the will of the conquerors, some being given to the Narragansets, and other Indians that assisted in the service.

The rest of the enemy being first fired out of their strong hold, were taken and destroyed, a great number of them being seized in the places where they intended to have hid themselves, the rest fled out of their own country over Connecticut river, up towards the Dutch plantation. Our soldiers being resolved by God's assistance to make a final destruction of them, were minded to pursue them which way soever they should think to make their escape, to which end in the next place, our soldiers went by water towards New Haven, whither they heard, and which in reason was most likely, they bent their course: soon after they were informed of a great number of them, that had betaken themselves to a neighbouring place not far off, whither they might hope it was not likely they should be pursued; but upon search, they found fifty or sixty wigwams, but without an Indian in any of them, but heard that they had passed toward the Dutch plantation; whereupon our soldiers that were before, all embarked for Quillepiack, afterwards called New Haven, and being landed there, they had not far to march unto the place where it was most probable they should either find or hear of them; accordingly in their march they met here and there with sundry of them, whom they slew or took prisoners, amongst whom were two sachems, whom they presently beheaded; to a third that was either a sachem or near akin to one, they gave his life upon condition that he should go and enquire where Sassacous was, and accordingly bring them word: this Indian, overlooking all other national or natural obligations, in consideration of his life that was received on that condition, proved very true and faithful to those that sent him; his order was to have returned in three days, but not being able within so short a time to make a full discovery of the business, and also to find a handsome way to escape, he made it eight days before he returned, in which something fell out not a little remarkable; for those he was sent to discover, suspecting at the last by his withdrawing himself, that he came for a spy, pursued after him, so he was forced to fly for his life, and getting down to the sea side, he accidentally met with a canoe a little before turned adrift, by which means he paddled by some shift or other so far out of the harbour, that making a sign he was discerned by some on board one of the vessels that attended on our soldiers, by whom being taken up, he made known what he had discovered. But after he was gone, Sassacous suspecting (and not without just cause) what the matter was, made his escape from the rest, with 20 or 30 of his men to the Mohawks, by whom himself and they that were with him, were all murdered afterward, being hired thereunto by the Narrragansets, as was confidently affirmed and believed.*

Thus this treacherous and cruel villian with his companions, having against his faith and promise, as well as contrary to the laws of nature and nations, murdered several others, both of the Dutch and English nation, is in the same manner himself, against the laws of hospitality murdered by those to whom he fled for refuge. *Vengeance is mine, saith the Lord, I will repay it.*

It is worthy our observation, this that Sassacous, the chief sachem of the Pequods, as afterwards Philip of Mount Hope (both of them in their several times and places the contrivers of many bloody and cruel mischiefs, yet) escaped the hands of those whom they had so many ways provoked to the utmost degree of indignation, that so they might not too much gratify their own spirit in taking revenge; but it must be brought about by those means by which the glory of divine vengeance and justice shall more eminently shine forth, that it might be truly said of them, as Adonibezek confessed of himself, As I have done, so God hath requitted me.

But to return: The rest of the Pequods from whom Sassacous had made an escape, shifted every one for himself, leaving but three or four behind them (when a party of soldiers according to the direction of him that was sent as a spy came upon the place) who would not or could not tell them whither their company were fled; but our soldiers ranging up and down as Providence guided them, at the last, July 13, 1637, they light upon a great number of them, they pursued them to a small Indian town seated by the side of an hideous swamp (near the place where Fairfield or Stratford now stands) into which they all slipt, as well Pequods as natives of the place, before our men could make any shot upon them, having placed a sentinel to give warning, Mr. Ludlow and Capt. Mason with half a score of their men happened to discover this crew. Capt. Patrick and Capt. Trask with about an hundred of the Massachusetts forces came in upon them presently after the alarm was given; such commanders as first happened to be there gave special orders that the swamp should be surrounded (being about a mile in compass) but Lieut. Davenport belonging to Capt. Trask's company, not hearing the word of command, with a dozen more of his company, in an over eager pursuit of the enemy, rushed immediately into the swamp, where they were very rudely entertained by those evening wolves that newly kennelled therein, for Lieut. Davenport was sorely wounded in the body, John Wedwood of Ipswich in the belly, and laid hold on by some of the Indians; Thomas Sherman of said Ipswich in the neck; some of their neighbours that ventured in with them were in danger of the enemy's arrows that flew very thick about them, others were in as much hazard of being swallowed by the miry boggs of the swamp, wherein they stuck so fast, that if Sergeant Riggs, of Roxbury, had not rescued two or three of them, they had fallen into the hands of the enemy: but such was the strength and courage of those that came to their rescue, that some of the Indians being slain with their swords, their friends were quickly relieved and drawn out of the mire and danger.

But the Indians of the place, who had for company sake run with their guests the Pequods into the swamp did not love their friendship so well as to be killed with them also for company sake, wherefore they began to bethink themselves they had done no wrong to the English, and desired a parley, which was granted, and they presently understood one another by the means of Thomas Stanton, an exact interpreter then at hand. Upon which the sachem of the place with several others and their wives and children, that liked better to live quietly in their wigwams than to be buried in the swamp, came forth and had their lives granted them: After some time of further parley with these, the interpreter was sent in to offer the like terms to the rest, but they were possessed with such a spirit of stupidity and sullenness that they resolved rather to sell their lives for what they could get there; and to that end began

* Sassacous's scalp was sent down to the English.—*Hubbard's Massachusetts History.*

to let fly their arrows thick against him as intending to make his blood some part of the price of their own; but through the goodness of God toward him, his life was not to be sold on that account, he being presently fetched off.

By this time night drawing on, our commanders perceiving on which side of the swamp the enemies were lodged, gave orders to cut through the swamp with their swords, that they might the better hem them round in one corner which was presently done, and so they were begirt in all night, the English in the circumference plying them with shot all the time, by which means many of them were killed and buried in the mire, as they found the next day. The swamp by the forementioned device being reduced to so narrow a compass, that our soldiers standing at twelve feet distance could surround it, the enemy kept in all the night; but a little before day-break (by reason of the fog that useth to arise about that time, observed to be the darkest time of the night) twenty or thirty of the lustiest of the enemy broke through the besiegers, and escaped away into the woods, some by violence and some by stealth cropping away, some of whom notwithstanding were killed in the pursuit; the rest were left to the mercy of the conquerors, of which many were killed in the swamp like sullen dogs, that would rather in their self-willedness and madness sit still to be shot or cut in pieces, than receive their lives for asking at the hand of those into whose power they were now fallen. Some that are yet living and worthy of credit do affirm, that in the morning entering into the swamp, they saw several heaps of them sitting close together, upon whom they discharged their pieces laden with ten or twelve pistol bullets at a time, putting the muzzles of their pieces under the boughs within a few yards of them; so, besides those that were found dead (near twenty it was judged) many more were killed and sunk into the mire and never were minded more by friend or foe; of those who were not so desperate or sullen as to sell their lives for nothing, but yielded in time, the male children were sent to the Bermudas, of the females some were distributed to the English towns, some were disposed of among the other Indians, to whom they were deadly enemies as well as to ourselves.

This overthrow given to the Pequods struck such a terror into all the Indians in those parts (some of whom had been ill affected to the English before) that they sought our friendship, and rendered themselves to be under our protection, which they then obtained, and have never since forfeited it any of them, till the late rebellion of Philip, the subject of the following discourse. Amongst the rest of the prisoners special notice was given of the wife of a noted Indian called Mononotto, who with her children submitted herself, or by the chance of the war fell into the hands of the English: it was known to be by her mediation that two English maids (that were taken from Weathersfield, upon Connecticut river) were saved from death, in requittal of whose pity and humanity, the life of herself and her children was not only granted her, but she was in special recommended to the care of that honorable gentleman Mr. John Winthrop, at that time being the worthy governor of Massachusetts; who taking notice of her modest countenance and behavior, as well as of her only request (not to suffer wrong either as to the honor of her body or fruit of her womb) gave special charge concerning her, according to his noble and christian disposition.

After this slaughter at the swamp, the Pequods being upon every turn exposed to the revenge of the Mohegins on one side, and the Narragansets on the English,* by whom they were put, some under the Mohegins and some under the Narragansets, which at last proved the occasion of the present quarrel as is conceived, through the ambition of Miantonimo, as will be hereafter related.

On the 12th of July, 1637, one Aganemo, a sachem of the Niantick Indians (who were a branch of the Narragansets) came to Boston with seventy of his own men: he made divers propositions to the English, which they took into consideration, and promised to give him an answer the next day: but finding that he had rescued divers of the Pequods, submitted to him since the last defeat, they first demanded the delivery of them, which he sticking at, they refused further conference with him: But the next morning he came and offered what they desired. So the governor referred him to the captains at the Pequod country, and writ instructions to them how to deal with him. So receiving his ten fathoms of wampum, they friendly dismissed him.

In July 1638, Uncas the sachem of the Mohegins, having entertained some of the Pequods, came to the governor at Boston with a present, and was much dejected because it was not first accepted: But afterwards the governor and council being satisfied about his innocency they accepted it, whereupon he promised to the order of the English, both touching the Pequods he had received, and as concerning the differences betwixt the Narragansets and himself, and confirmed all with this compliment; this heart, said he, (laying his hand upon his heart) is not mine but your's, command me any difficult service and I will do it, I have no men but they are all your's, I will never believe any Indian against the English any more; and so he continued for ever after, as may be seen in the following transactions between the Indians and the English: whereupon he was dismissed with some small reward, and went home very joyful, carrying a letter of approbation for himself and his men, through the English plantations.

This was the issue of the Pequod war, which in the day of it here in New England was as formidable to the country in general as the present war with Philip; the experience of which, because it may administer much comfort and encouragement to the surviving generation as well as of praise and thanksgiving to Almighty God, from all those who have thus long quietly enjoyed the benefit and reaped the fruit of their labour and courage who engaged therein, the more pains hath been taken to search out the broken pieces of that story and thus put them together, before the memory thereof was buried in the ruins of time, and past the recovery and knowledge of the present age.

* Seven hundred of them were thought to be destroyed.

After subduing the Pequods in the year 1637, the Narragansets, the most numerous of the other Indians, either out of discontent, that the whole sovereignty over the rest of the Indians was not adjudged to belong to them, or out of envy, that Uncas the chief sachem of the Mohegin Indians, had insinuated further than themselves into the favour of the English, were observed to be always contriving mischief against them, notwithstanding a firm agreement was made between the English and the said Narragansets in the year 1637, when they had helped to destroy the Pequods, and also notwithstanding the triple league between the said Narragansets, the Mohegins, and the English at Hartford (the chief town of Connecticut) made in the year 1638, wherein the said Indians were solemnly engaged not to quarrel with the Mohegins or any other Indians, until they first asked the advice of the English, to whose determination, they had likewise obliged themselves to stand in all following differences among them. They carried it subtilely and underhand for some years, and were pretending quarrels with the said Uncas, against whom they had always an inveterate malice, ever since the agreement made about distributing the Pequods, after the war with them had ended, expecting in all probability that all should have been left to their sole arbitrament. The Mohegins on the other side, though not so numerous, yet a more warlike people and more politic, always made their recourse to the English, complaining of the insolence of the Narragansets, contrary to their league, so as they would hardly be kept from making open war against them, when they saw all other attempts to kill and destroy Uncas the Mohegin sachem, by treachery, poison and sorcery prove ineffectual. Inasmuch that at last the malice of Miantonimo and his Narragansets grew to that height, that they began to plot against the English themselves, for defending Uncas.

The Narragansets were animated by the haughty spirit and aspiring mind of Miantonimo, the heir apparent of all the Narraganset people, after the decease of the old sachem, Canonicus, who was his uncle. This Miantonimo was a very goodly personage, of tall stature, subtle and cunning in his contrivements, as well as haughty in his designs. It was strongly suspected that in the year 1642, he had contrived to draw all the Indians throughout the country into a general conspiracy against the English: For, the first of September, 1642, letters came to the court of Connecticut, and from two of the magistrates there, that the Indians had conspired to cut off the English all over the country: Mr. Ludlow certified as much from the place where he lived near the Dutch. The time appointed for the assault, was said to be after harvest; the manner to be by several companies, entering into the chief men's houses, by way of trade, and then to kill them in their houses, and seize their arms, and others should be at hand to prosecute the massacre: This was also confirmed by three Indians that were said to reveal it in the same manner, and at the same time, to Mr. Ludlow and to the governor of New Haven. It was added also that another Indian should discover the same plot to Mr Hames of Connecticut by some special circum-

stances, viz. that being much hurt by a cart (which usually there are drawn with oxen) he should send for Mr. Haines and tell him, that Englishman's God was angry with him, and sent Englishman's cow (meaning the oxen in the cart, or wayne) to kill him because he had concealed a plot against the English, and so told him all as the other Indians had done.

Upon this, their advice from Connecticut was, that we should begin with them and enter upon a war presently, and that if Massachusetts would send 120 men to Saybrook, at the river's mouth, they would meet them with a proportionable number. This was a very probable story, and very likely it was, that the Indians had been discoursing of some such business among themselves. But the general court of Massachusetts when called together, did not think those informations to be a sufficient ground whereon to begin a war. Although the governor and magistrates as many as could convene together before the court ordered that all the Indians within their jurisdiction should be disarmed, which they willingly yielded unto: and upon all the enquiries and examinations which were made by the court when assembled together, they could not find any such violent presumption of a conspiracy, as to the ground of a war. Besides, it was considered, that the reports of all Indians were found by experience to be very uncertain, especially when it may be raised and carried by such as are at variance one with another; who may be very ready to accuse one another to ingratiate themselves with the English. Miantonimo, sachem of Narraganset, was sent unto, and by his readiness to appear, satisfied the English that he was innocent as to any present conspiracy; though his quarrel with the Mohegins (who bordered upon Connecticut colony) might very probably, as was judged, render him the subject of such a report, or an occasion of it.

The said Miantonimo when he came before the court peremptorily demanded that his accusers might be brought before him face to face, and if they could not prove it, then to be made to suffer, what himself, if he had been found guilty, had deserved, i. e. death, his reasons for which were very plausible. He urged very much the prosecuting such a law against his accusers; alleging, that if the English did not believe it, why did they disarm the Indians round about: and if they did believe it, equity required, that they who accused him should be punished according to the offence charged upon himself. He offered also to make it good against Uncas, sachem of the Mohegins, that the report was raised either by him or some of his people. The English answered, that divers Indians had robbed some of the Englishmen's houses, which might be a sufficient ground to disarm; and with that he was something satisfied. The Connecticut men were hardly prevailed with to forbear the war against them, but at last they were overcome with the allegations of the Massachusetts to lay it aside.

Miantonimo when he was at Boston was very deliberate in his answers, shewing a good understanding in the principles of justice and equity, as well as a seeming ingenuity withal; but though his words were smoother than oil, yet, as many conceived, in his heart were drawn swords. It was observed also, that he would never speak but when some of his counsellors were present, that they might, as he said, bear witness of all his speeches at their return home.

They spent two days in the treaty, wherein at last he gave them satisfaction in all things, though he held off long about the Nianticks, of whom he said they were as his own flesh, engaging on their behalf, that if they should do any wrong, so as neither he nor they could satisfy without blood, then he would leave them to the mercy of the English. At his departure he gave his hand to the governor, telling him, that was for the magistrates that were absent.

While he was at Boston one of his own followers had been a principal evidence against him; he however promised to deliver him to the Mohegin sachem whose subject he was; notwithstanding which promise, going homeward he cut off his head to prevent his telling more tales. And with great discontent, as he was going home said, he would come no more to Boston, wherein he proved a truer prophet than he himself believed when he uttered the words, for in the end of the same year, 1643, making war upon Uncas, he was taken prisoner by him, and soon after by the advice of the commissioners of the four colonies (at that time firmly united into a league offensive and defensive, on which account they were after that time called the united colonies of New-England; though since that time they are reduced to but three colonies; that of New Haven and Connecticut by the last patent being united in one) his head was cut off by Uncas, it being justly feared, that there would never be a firm peace, either betwixt the English and the Narragansets, or betwixt the Narragansets and the Mohegins, while Miantonimo was left alive: However, the Narragansets have ever since that time bore an implacable malice against Uncas, and all the Mohegins, and for their sakes secretly against the English, so far as they durst discover it.

In the year 1645, and 1646, they grew so insolent, that the commissioners of the united colonies were compelled to raise forces to go against them, but when they perceived that the English were in good earnest, they began to be afraid, and sued for piece, submitted to pay tribute to satisfy the charges of preparation for the war, but were always very backward to make payment until the English were forced to demand it by new forces, so that it appeared they were unwilling to hold any friendly correspondence with the English, yet durst never make any open attempt upon them, until the present rebellion, wherein they had no small hand, is too evident, notwithstanding all their pretences to the contrary, as will appear in the sequel of this history.

Thus it is apparent upon what terms the English stood with the Narragansets, ever since the cutting off Miantonimo, their chief sachem's head by Uncas, it being done with the advice and counsel of the English, Anno 1643. As for the rest of the Indians, ever since the suppression of the Pequods, in the year 1637, until the year 1675, there was always in appearance amity and good correspondence on all sides, scarce an Englishman was ever known to be assaulted or hurt by any of them, until after the year 1674, when the son of one Matoonas, who, as was supposed being vexed in his mind that the design against the English, intended to begin 1671, did not take place, out of mere malice and spite against them, slew an Englishman travelling along the road, and the said Matoonas being a Nipnet Indian, which Nipnets were under the command of the sachem of Mount Hope, the author of all the present mischiefs.

Upon a due enquiry into all the preceding transactions between the Indians and the English, from their first settling in these coasts, there will appear no ground of quarrel that any of them had against the English, nor any provocation upon one account or another; for when Plymouth colony was first planted, within three months after their first landing, March 16, 1620, Massasoit, the chief sachem of all that side of the country, repaired to the English at Plymouth, and entered into a solemn league upon sundry articles, (printed in New-England's Memorial, 1689) which are as follows, viz.

1. That neither he nor any of his should injure or do hurt to any of their people.

2. That if any of his did any hurt to any of theirs, he should send the offender that they might punish him.

3. That if any thing were taken away from any of theirs, he should cause it to be restored; and they should do the like to his.

4. That if any did unjustly war against him, they should aid him, and if any did war against them, he should aid them.

5. That he should send to his neighbour confederates, to certify them of this, that they might not wrong them, but might likewise be comprised in these conditions of peace.

6. That when his men came to them upon any occasion, they should leave their arms (which were then bows and arrows) behind them.

7. That in so doing, their sovereign lord, King James, would esteem him as their friend and ally.

This league the same sachem, September 26, 1630, a little before his death, coming with his eldest son, afterwards called Alexander, did renew with the English at the court of Plymouth, for himself and his son, and their heirs and successors: And after that he came to Mr. Brown's, who lived not far from Mount Hope, bringing his two sons, Alexander and Philip with him, desiring there might be love and amity after his death, between his sons and them, as there had been betwixt himself and them in former times: yet it is very remarkable that this Massasoit, called also Woosamequen, (how much soever he affected the English) was never in the least degree well affected to the religion of the English, but would in his last treaty with his neighbours at Plymouth, when they were with him about purchasing some land at Swanzey, have had them engaged never to attempt to draw away any of his people from their old pagan superstition, and devilish idolatry, to the christian religion, and did much insist upon it till he saw the English were resolved never to make any treaty with him more upon that account, which when he discerned, he did not further urge it: but that was a bad omen, that, notwithstanding whatever his humanity was to the English, as they were strangers, (for indeed they had repaired his former kindness to them, by protecting him afterwards against the inso-

lences of the Narragansets) he manifested no small displacency of spirit against them, as they were christians; which strain was evident more in his son that succeeded him, and all his people, insomuch that some discerning persons of that jurisdiction have feared that nation of Indians would all be rooted out, as has since come to pass. The like may be observed concerning the Narragansetts, who were always more civil and courteous to the English than any of the other Indians, though never have as yet received the least tincture of the christian religion, but have in a manner run the same fate with their neighbours of Mount Hope, there being very few of them left standing. Nor is it unworthy the relation, what a person of quality amongst us hath lately affirmed, viz. One much conversant with the Indians about Merrimac river, being Anno 1660, invited by some Sagamores or sachems to a great dance, (which solemnities are the times they make use of to tell their stories, and convey the knowledge of some past and most memorable things to posterity) Passaconaway, the great sachem of that part of the country, intending at that time to make his last and farewell speech to his children and people, that were then all gathered together, addressed himself to them in this manner:

"I am now going the way of all flesh, or ready to die, and not likely to see you ever met together any more: I will now leave this word of counsel with you, that you may take heed how you quarrel with the English, for though you may do them much mischief, yet assuredly you will all be destroyed, and rooted off the earth if you do; for I was as much an enemy to the English, at their first coming into these parts, as any one whatsoever, and did try all ways and means possible to have destroyed them, at least to have prevented them sitting down here, but I could no way effect it, therefore I advise you never to contend with the English, nor make war with them:" And accordingly his eldest son Wanalancet by name, as soon as he perceived that the Indians were up in arms, withdrew himself into some remote place, that he might not be hurt by the English, or the enemies, or be in danger by them.

This passage was thought fit to be inserted here, it having so near an agreement with the former, intimating some secret awe of God upon the hearts of some of the principal amongst them, that they durst not hurt the English, although they bear no good affection to their religion, wherein they seem not a little to imitate Balaam, who, whatever he uttered, when he was under the awful power of divine illumination, yet when left to himself, was as bad an enemy to the Israel of God as ever before.

But to return.

After the death of this Woosamequen, or Massasoit, his eldest son succeeded him about 20 years since, Alexander by name, who notwithstanding the league he had entered into with the English, together with his father, in the year 1639, had neither affection to the Englishmen's persons, nor yet to their religion, but had been plotting with the Narragansets, to rise against the English; of which the governor and council of Plymouth being informed, they presently sent for him to bring him to the court; the person to whom that service was committed, was a prudent and resolute gentleman, the present governor of the said colony, who was neither afraid of danger, nor yet willing to delay in a matter of that moment, he forthwith taking eight or ten stout men with him well armed, intended to have gone to the said Alexander's dwelling, distant at least forty miles from the governor's house, but by a good providence, he found him whom he went to seek at a hunting-house, within six miles of the English towns, where the said Alexander, with about eighty men, were newly come in from hunting, and had left their guns without doors, which Major Winslow with his small company wisely seized and conveyed away, and then went into the wigwam, and demanded Alexander to go along with him before the governor, at which message he was much appalled, but being told by the undaunted messenger, that if he stirred or refused to go he was a dead man; he was by one of his chief counsellors, in whose advice he most confided, persuaded to go along to the governor's house, but such was the pride and height of his spirit, that the very surprisal of him, so raised his choler and indignation, that it put him into a fever, which notwithstanding all possible means that could be used, seemed mortal; whereupon entreating those that held him prisoner, that he might have liberty to return home, promising to return again if he recovered, and to send his son as hostage till he could do so; on that consideration he was fairly dismissed, but died before he got half way home. Here let it be observed, that, although some have taken up false reports as if the English had compelled him to go further and faster than he was able, and so he fell into a fever, or as if he was not well used by the physician that looked to him, while he was with the Englisn; all which are notoriously false; nor is it to be imagined that a person of so noble a disposition as is this gentleman (at that time employed to bring him) should himself, or suffer any one else to be uncivil to a person allied to them, by his own, as well as his father's league, as the said Alexander also was; nor was any thing of that nature ever objected to by the English of Plymouth, by the said Alexander's brother, by name Philip, commonly for his ambitious and haughty spirit nicknamed King Philip, when he came in the year 1662, in his own person with Sausaman and secretary and chief counsellor, to renew the former league that had been between his predecessors and the English of Plymouth; but there was as much correspondence betwixt them for the next seven years as ever had been in any former times. What can be imagined, therefore, besides the instigation of Satan, that envied at the prosperity of the church of God here seated, or else fearing lest the power of the Lord Jesus, that had overthrown his kingdom in other parts of the world, should do the like here, and so the stone taken out of the mountain without hands, should become a great mountain itself, and fill the whole earth; no cause for provocation being given by the English! For once before this, in the year 1671, the devil, who was a murderer from the beginning, had so filled the heart of this savage miscreant with envy and malice against the English, that he was ready to break out in open war against the inhabitants of Plymouth, pretending some trifling injuries done him in his planting land, but when the matter of controversy came to be heard by divers of the Massachusetts colony, yea, when he himself came to Boston, as it were referring his case to the judgment of that colony, nothing of that nature could be made to appear, whereupon in way of submission, he was of necessity by that evident conviction forced to acknowledge that it was the naughtiness of his own heart, that put him upon that rebellion, and nothing of any provocation from the English; and to a confession of this nature with a solemn renewal of this covenant, declaring his desire, that this covenant might testify to the world against him, if ever he should prove unfaithful to those of Plymouth, or any other of the English colonies therein, himself with his chief counsellors subscribed in the presence of some messengers sent on purpose to hear the difference between Plymouth and the said Philip. But for further satisfaction of the reader, the said agreement and submission shall here be published.

Taunton, April 10, 1671.

"Whereas my father, my brother, and myself have formerly submitted ourselves and our people unto the king's majesty of England, and to this colony of New Plymouth, by some solemn covenant under our hand; but I having of late through my indiscretion, and the naughtiness of my heart violated and broken this my covenant with my friends, by taking up arms, with evil intent against them, and that groundlessly; I being now deeply sensible of my unfaithfulness and folly, do desire at this time solemnly to renew my covenant with my ancient friends, and my father's friends abovementioned, and do desire this may testify to the world against me if ever I shall again fail in my faithfulness towards them (whom I have now and at all times found kind to me) or any other of the English colonies; and as a real pledge of my true intentions, I do freely engage to resign up unto the government of New Plymouth, all my English arms, to be kept by them for their security, so long as they shall see reason. For true performance of these premises, I have hereunto set my hand together with the rest of my council.

The mark *P.* of *Philip*,
chief sachem of *Pakanoket*,
The mark *V.* of *Tavoser*,
The mark *M.* of Capt. *Wispoke*,
The mark *T.* of *Wookaponchunt*,
The mark 8 of *Nimrod*"

In presence of
WILLIAM DAVIS,
WILLIAM HUDSON,
THOMAS BRATTLE.

Philip also in the same year signed the following *Articles:*

1. "We Philip and my council and my subjects, do acknowledge ourselves subject to his majesty the king of England, and the government of New Plymouth, and to their laws.

2. "I am willing and do promise to pay unto the governor of Plymouth, one hundred pounds in such things as I have: But I would intreat the favour that I might have three years to pay it in, forasmuch as I cannot do it at present.

3. "I do promise to send unto the governor, or whom he shall appoint, five wolves heads, if I can get them: Or, as many as I can procure, until they come to five wolves yearly.

4. "If any difference fall between the English and myself, and people, then I do promise to repair to the governor of Plymouth, to rectify the difference amongst us.

5. "I do promise not to make war with any, but with the governor's approbation of Plymouth.

6. "I promise not to dispose of any of the lands that I have at present, but by the approbation of the governor of Plymouth.

"For the true performance of the said sachem, Philip of Paukamakett, do hereby bind myself and such of my council, as are present, ourselves, our heirs, our successors, faithfully, do promise, in witness thereof, we have hereunto subscribed our hands, the day and year above written."

The mark *P.* of *Philip*,
the sachem of *Pokanoket*,
The mark [of *Uncomdaen*,
The mark ‡ of *Wocokom*,
The mark 7 of *Samkama*."

In the presence of the court and divers of the magistrates and other gentlemen of Massachusetts and Connecticut.

To which, for the further clearing the justice of the present war the result of the debate of the commissioners of the united colonies about the matter of the war shall be here inserted.

At a meeting of the commissioners of the united colonies held at Boston, September 9th, 1675.

"We having received from the commissioners of Plymouth, a narrative, shewing the rise and several steps of that colony, as to the present war with the Indians, which had its beginning there, and its progress into Massachusetts, by their insolencies and outrages, murdering many persons, and burning their houses in sundry plantations in both colonies. And having duly considered the same, do declare that the said war be both just and necessary, and its first rise only a defensive war. And therefore we do agree and conclude that it ought to be jointly prosecuted by all the united colonies, and the charges thereof to be borne and paid as is agreed in the articles of confederation.

JOHN WINTHROP,
JAMES RICHARDS,
THOMAS DANFORTH,
WILLIAM STOUGHTON,
JOSIAH WINSLOW,
THOMAS HINCKLEY."

But whatever his submission was before, or his subjecting himself and his people to our king, or his engagement to pay a sum of money in part of the charges then occasioned by him (and notwithstanding the English in or about Plymouth, since, or before that time were never any ways injurious to him, or any of his people) all which are fully declared in a narrative given by the commissioners of the the colony of Plymouth, wherein they also signified that the settlement and issue of the former controversy between Philip and them, was obtained and made (principally) by the mediation, and inposed advice and counsel of the other two confederate colonies, and also in a letter under the governor's hand, in the following words:

"I think I can clearly say, that before these present troubles broke out, the English did not possess one foot of land in this colony, but what was fairly obtained by honest purchase of the Indian proprietors: nay, because some of our people are of a covetous disposition, and the Indians are in their straits easily prevailed with to part with their lands, we first made a law that none should purchase or receive by gift, any land of the Indians without the knowledge and allowance of our court, and penalty of a fine, five pounds per acre, for all that should be so bought or obtained. And lest yet they should be straightened, we ordered that Mount Hope, Pocasset, and several other necks of the best land in the colony, because most suitable and convenient for them, should never be bought out of their hands, or else they would have sold them long since. And our neighbours at Rehoboth and Swanzy, although they bought their lands fairly of this Philip and his father and brother, yet because of their vicinity, that they might not trespass upon the Indians, did at their own cost set up a very substantial fence quite across that great neck between the English and the Indians, and payed due damage if at any time an unruly horse or other beast broke in and trespassed.

"And for divers years last past (that all occasion of offence in that respect might be prevented) the English agreed with Philip and his, for a certain sum yearly to maintain the said fence, and secure themselves. And if at any time they have brought complaints before us, they have had justice impartial and speedily, so that our own people have frequently complained, that we erred on the other hand in shewing them over much favour.

JOS. WINSLOW."

Marshfield, May 1, 1676.

Yet did this treacherous and perfidious caitiff still harbour the same or more mischievous thoughts against the English than ever before, and hath been since that time plotting with all the Indians round about, to make a general insurrection against the English in all the colonies which, as some prisoners lately brought in have confessed, should have been put in execution at once, by all the Indians rising as one man, against all those plantations of the English, which were next to them. The Narragansets having promised, as was confessed, to rise with four thousand fighting men in the spring of 1676. But by the occasion hereafter to be mentioned about Sausaman, Philip was necessitated for the safety of his own life to begin the rebellion the year before, when the design was not fully ripe. Yet some are ready to think, that if his own life had not now been in jeopardy by the guilt of the murder of the aforesaid Sausaman, his heart might have failed him; when it should have come to be put into execution, as it did before in the year 1671, which made one of captains, of far better courage and resolution than himself, when he saw his cowardly temper and disposition, fling down his arms calling him a white livered cur, or to that purpose, and saying that he would never own him again, or fight under him; and from that time hath turned to the English, and hath continued to this day a faithful and resolute soldier in their quarrels.

That the Indians had a conspiracy amongst themselves to rise against the English, is confirmed by some of the Indians about Hadley, although the plot was not come to maturity when Philip began, the special providence of God therein overruling the contrivers: for when the beginning of the troubles first was reported from Mount Hope, many of the Indians were in a kind of amaze, not knowing well what to do, sometimes ready to stand for the English, as formerly they had been wont to do; sometimes ready to strike in with Philip, (which at the last they generally did) which if it had been foreseen, much of that mischief might have been prevented that fell out in several places, more by perfidious and treacherous dealing than any other ways; the English never imagining that after so many obliging kindnesses received from them by the Indians, besides their many engagements and protestations of friendship as formerly, they would have been so ungrateful, perfidiously false and cruel, as they have since proved.

The occasion of Philip's so sudden taking up arms the last year was this—there was one John Sausaman a very cunning and plausible Indian well skilled in English language, and bred up in a profession of the christian religion, employed as a schoolmaster at Natick, the Indian town, who upon some misdemeanor fled from his place to Philip, by whom he was entertained in the room and office of a secretary, and his chief counsellors whom he trusted with all his affairs and secret counsels: but afterwards, whether upon sting of his own conscience, or by the frequent solicitations of Mr. Elliot, that had known him from a child and instructed him in the principles of our religion, who was often laying before him the heinous sin of his apostacy, and returning back to his old vomit he was at last prevailed with to forsake Philip, and return back to the christian Indians at Natick, where he was baptized, manifesting public repentance for all his former offences, and made a serious profession of the christian religion; and did apply himself to preach to the Indians, wherein he was better gifted than any other of the Indian nation, as he was observed to conform more to the English manner than any other Indian; yet having occasion to go up with some others of his countrymen to Namasket; (now Middleborough) whether the advantage of fishing, or some such occasion, it matters not; being there not far from Philip's country he had occasion of being in the company of Philip's Indians, and Philip himself; by which means he discerned by several circumstances, that the Indians were plotting anew against us; which out of faithfulness to the English, the said Sausaman informed the governor of, adding also, that if it were known that he revealed it, he knew they would presently kill him. There appearing so many concurrent testimonies from others making it the more probable, that there was a certain truth in the information, some inquiry was made into the business, by examining Philip himself, and several of his Indians, who although they would own nothing, yet could not free themselves from just suspicion.—Philip therefore soon after contrived the said Sausaman's death, which was strangely discovered notwithstanding it was so cunningly effected, for they that murdered him met him upon the ice on a great pond, and presently after they had knocked him down, put him under the ice, yet leaving his gun and hat upon

the ice, that it might be thought he fell in accidentally through the ice and was drowned; but being missed by his friends, who finding his hat and gun, they were thereby led to the place, where his body was found under the ice.—When they took him up to bury him, some of his friends, particularly one David, observed some bruises about his head, which made them suspect that he was first knocked down before he was put into the water, however they buried him near the place where he was found, without making any further inquiry at present: nevertheless David his friend, reported these things to some English at Taunton (a town not far from Namasket) which occasioned the governor to inquire further into the business, visely considering that as Sausaman had told him that if it were known that he related any of their plots, they would murder him for his pains: wherefore, by special warrant the body of Sausaman being digged again out of his grave, it was very apparent that he had been killed and not drowned. And by a strange providence, an Indian was found, that by accident standing unseen upon a hill, had seen them murdering the said Sausaman, but durst never reveal it, for fear of losing his own life likewise, until he was called to the court at Plymouth, or before the governor where he plainly confessed what he had seen. The murderers being apprehended, were convicted by his undeniable testimony, and other remarkable circumstances, and so were all put to death, being three in number; the last of them confessed immediately before his death, that his father (one of the counsellors and special friends of Philip) was one of the two that murdered Sausaman, himself only looking on. This was done at Plymouth court, held in June, 1675, insomuch that Philip apprehending the danger his own head was in next, never used any further means to clear himself from what was like to be laid to his charge, either about his plotting against the English, nor yet about Sausaman's death; but by keeping his men continually about him in arms, and gathering what strangers he could to join with him, marching up and down constantly in arms, both while the court sat as well as afterwards. The English of Plymouth, hearing of all this, yet took no further notice than to order a military watch in all the adjacent towns hoping that Philip, finding himself not likely to be arraigned by order of the said court, the present cloud might blow over as some others of like nature had done before: but in conclusion, the matter proved otherwise, for Philip finding his strength daily increasing by the flocking of neighbouring Indians unto him, and sending over their wives and children to the Narragansets for security (as they used to do when they intended war with any of their enemies) they immediately began to alarm the English at Swanzey (the next town to Philip's country) as it were daring the English to begin; at last their insolencies grew to such an height, that they began not only to use threatening words to the English, but also to kill their cattle and rifle their houses; whereat an Englishman was so provoked, that he let fly a gun at an Indian, but did only wound not kill him; whereupon the Indians immediately began to kill all the English they could, so that on the 24th of June, 1675, was the alarm of war first sounded in Plymouth colony, when eight or nine of the English were slain in or about Swanzey; they first making a shot at a company of English as they returned from the assembly where they were met in a way of humiliation on that day, whereby they killed one and wounded others, and then likewise they slew two men on the highway, sent to call a surgeon; and the same day barbarously murdered six men in and about a dwelling-house in another part of the town; all which outrages were committed so suddenly, that the English had no time to make any resistance: for on the 14th day of the same month, besides endeavours used by Mr. Brown, of Swanzey, one of the magistrates of Plymouth jurisdiction, an amicable letter was sent from the council of Plymouth shewing their dislike of his practices, and advising him to dismiss his strange Indians, and not to suffer himself to be abused by false reports, concerning them that intend him no hurt; but no answer could be obtained, otherwise than threatening of war, which it was hoped might have been prevented, as heretofore it had been, when things seemed too look with as bad a face as they then did.

However, the governor and council of Plymouth, understanding that Philip continued in his resolution, and manifested no inclination to peace, they immediately sent up what forces they could to secure the towns thereabouts, and make resistance as occasion might be; and also dispatched away messengers to the Massachusetts governor and council, letting them know the state of things about Mount Hope, and desiring their speedy assistance; upon which care was immediately taken with all expedition to send such supplies as were desired: But in the meantime two messengers were dispatched to Philip, to try whether he could not be diverted from his bloody enterprize, so as to have prevented the mischief since fallen out, hoping, that as once before, viz. in the year 1671, by their mediation a stop was put to the like tragedy, so the present war might by the same means have been now turned aside: For in the said year Philip had firmly engaged himself, when he was at Boston, not to quarrel with Plymouth until he had first addressed himself to Massachusetts for advice and approbation: But the two messengers aforesaid, finding the men slain in the road, June 24, as they were going for the surgeon, apprehended it not safe to proceed any further, considering also, that a peace now could not honourably be concluded after such barbarous outrages committed upon some of the neighbour colony: Wherefore, returning with all speed to Boston, the Massachusetts forces were dispatched away with all imaginable haste, as the exigence of the matter did require, some of them being then upon, or ready for their march, the rest were ordered to follow after, as they could be raised. The sending forth of which, because it was the first engagement in any warlike preparations against the Indians, shall be more particularly related.

On the 26th of June, a foot company under Capt. Daniel Henchman, with a troop under Capt. Thomas Prentice, were sent out of Boston towards Mount Hope: It being late in the afternoon before they began to march, the central eclipse of the moon in Capricorn happened in the evening before they came up to the Neponset river, about twenty miles from Boston, which occasioned them to make a halt, for a little repast, till the moon recovered her light again. Some melancholy fancies would not be persuaded, but that the eclipse falling out at that instant of time was ominous, conceiving also that in the centre of the moon they discerned an unusual black spot, not a little resembling the scalp of an Indian: As others not long before, imagined they saw the form of an Indian bow, accounting that likewise ominous (although the mischief following were done by guns, and not by bows) both the one and the other, might rather have thought of what Marcus Crassus the Roman general, going forth with an army against the Parthians, once wisely replied to a private soldier, that would have dissuaded him from marching that time, because of an eclipse of the moon in Capricorn, that he was more afraid of Sagitarius than of Capricornus, meaning the arrows of the Parthians (accounted very good archers) from whom as things then fell out, was his greatest danger. But after the moon had waded through the dark shadow of the earth, and borrowed her light again, by the help thereof, the two companies marched on towards Woodcock's house, thirty miles from Boston, where they arrived next morning; and there retarded their motion till afternoon, in hope of being overtaken by a company of volunteers, under the command of Capt. Samuel Moseley, which accordingly came to pass, so that on June 20, they all arrived at Swanzy, where, by the advice of Capt. Cudworth the commander in chief of Plymouth forces, they were removed to the head quarters, which for that time was appointed at Mr. Miles's house, the minister of Swanzey, within a quarter of a mile of the bridge, leading into Philip's lands. They arriving there some little time before night, twelve of the troops, unwilling to lose time passed over the bridge, for discovery, into the enemies territories, where they found the rude welcome of eight or ten Indians firing upon them out of the bushes, killing one William Hammond, wounding Corporal Belcher, his horse being also shot down under him; the rest of the troopers having discharged upon those Indians, who run away after the first shot, carried off their two dead and wounded companions, and so retired to their main guard, for that night pitching in a barricado about Mr. Miles's house. The enemy thought to have braved it out by a bold assault or two at first; but their hearts soon began to fail them when they perceived the Massachusetts and Plymouth forces both engaging them: for the next morning they shouted twice or thrice, at half a mile's distance, and nine or ten of them showing themselves on this side of the bridge, our horsemen, with the whole body of the volunteers under Capt. Mosely, not at all daunted by such kind of alarms, and not willing to lose the bridge, ran down upon them over the said bridge, pursuing them a mile and a quarter on the other side: Ensign Savage, that young martial spark, scarce twenty years of age, had at that time one bullet lodged in his thigh, another shot through the brim of his hat, by ten or twelve of the enemy discharging upon him together, while he boldly held up his colours in front of his company: But the weather not suffering any further action at

that time, those that were thus far advanced were compelled to retreat back to the main guard, having first made a shot upon the Indians, as they run away into the swamp near by, whereby they killed five or six of them, as was understood soon after at Narraganset: This resolute charge of the English forces upon the enemy made them quit their place on Mount Hope that very night, where Philip was never seen after; till the next year, when he was by a divine mandate sent back; there to receive the reward of his wickedness where he first began his mischief: The next day Major Savage that was to command in chief over the Massachusetts forces being come up with other supplies, about six o'clock over night the whole body intended to march into Mount Hope, and there beat up the enemy's quarters, or give him battle, if he durst abide it: But the weather being doubtful, our forces did not march till near noon, about which time they set out, with a troop of horse in each wing, to prevent the danger of the enemy's ambuscadoes; after they had marched about a mile and a half, they passed by some houses newly burned: Not far off one of them found a bible newly torn, and the leaves scattered about, the enemy, in hatred of our religion therein revealed; two or three miles further they came up with some heads, scalps, and hands cut off from the bodies of some of the English, and stuck upon poles near the highway, in that barbarous and inhuman manner bidding us defiance; the commander in chief giving order that those monuments of the enemy's cruelty should be taken down and buried; The whole body of the forces still marched on two miles further, where they found divers wigwams of the enemy, among which were many things scattered up and down, arguing the hasty flight of the owners; half a mile further, as they passed on through many fields of stately corn, they found Philip's own wigwam; every place giving them to perceive the enemy's hasty departure from thence; after they had marched two miles further they came to the seaside, yet in all this time meeting with no Indians, nor any signs of them, unless of their flight to some other places. The season being likely to prove very tempestuous and rainy, Capt. Cudworth with some of the men of Plymouth passed over to Rhode-Island. The forces under Major Savage were forced to abide all night in the open field, without any shelter, notwithstanding the abundance of rain that fell, and in the morning despairing to meet with an enemy on Mount Hope, they retreated back to their head quarters at Swanzy, in their way meeting with many Indian dogs that seemed to have lost their masters. That night Capt. Prentice's troops for conveniency of quarters as also for discovery, were dismissed to lodge at Seaconk or Rehoboth, a town within six miles of Swanzy. As they returned back in the morning, Capt. Prentice divided his troops, delivering one half to Lieut. Oakes, and keeping the other himself, who as they rode along, espied a company of Indians burning a house: but could not pursue them by reason of several fences, that they could not go over till the Indians had escaped into a swamp. Those with Lieut. Oakes had the like discovery but with better success, as to the advantage of the ground, so as pursuing of them upon a plain, they slew four or five of them in the chase, whereof one was known to be Thebe, a sachem of Mount Hope, another of them was a chief counsellor of Philip's; yet in this attempt the lieutenant lost one of his company, John Druce by name, who was mortally wounded in his bowels, whereof he soon afterward died, to the great grief of his companions. After the said troops came to head quarters at Swanzy, they understood from Capt. Cudworth that the enemy were discovered upon Pocasset,* another neck of land lying over an arm of the sea more towards Cape Cod: However it was resolved that a more narrow search should be made after them, both upon Mount Hope and upon the ground between Swanzy and Rehoboth to scout the swamps and assault them if they could find where they were entrenched. Capt. Henchman and Capt. Prentice were ordered to search the swamps, while Capt. Mosely and Capt. Paige with their dragoons attended on Major Savage, should return back into Mount Hope, that they should be sure to leave none of the enemy behind them, when they should remove to pursue them elsewhere.

About ten o'clock the next morning, July 4th, Capt Henchman, after a long and tedious march, came to the head quarters, and informed that he came upon a place where the enemy had newly been that night, but were escaped out of the reach: But the following night before they were determined on any other motion, Capt. Hutchinson came up from Boston with new orders for them to pass into Narraganset, to treat with the sachems there that if it might be so to prevent their joining with Philip. Capt. Cudworth by this time was come up to the head quarters, having left a garrison of 40 men upon Mount Hope neck. The next morning was spent in consultation how to carry on the treaty; it was then resolved, that they should go to make a peace with a sword in their hands, having no small ground of suspicion that the said Narragansets might join with the enemy, wherefore they thought it necessary, to carry all the Massachusetts forces over to the Narraganset country, to fight them if they should be needed; Capt. Mosely passed over by water to attend Capt. Hutchinson in his dispatch; the other companies with the troopers riding round about. As they passed they found the Indians in Pomham's country (next adjoining to Philip's borders) all fled, and their wigwams without any people in them.

After they came to the Narraganset sachems, three or four days were spent in a treaty, after which a peace was concluded with them by the messengers of Connecticut colony (who were ordered to meet with those of Massachusetts (and the commanders of the forces sent against Philip: Hostages were also given by the said Naragansets for the performance of the agreement. A copy of the said agreement, and the articles on which a peace was concluded, here follow. It being always understood, that Plymouth colony was included in the said agreement, although their forces were not then present, but remained at home near the enemy's borders, to secure their towns, and oppose Philip as there might be occasion, if he offered to make any new attempt in the meantime.

Articles, covenant and agreements had, made and concluded by, and between Major Thomas Savage, Capt. Edward Hutchinson, and Mr. Joseph Dudley, in behalf of the government of Massachusetts colony, and Major Wait Winthrop and Mr. Richard Smith, on behalf of Connecticut colony the one party; and Agamaug, Wampash *alias* Corman, Taitson Tawageson, counsellors and attorneys to Canonicus, Ninigret Matataog, old queen Quiapen, Quananshit and Pomham, the six present sachems of the whole Narraganset country on the other party, referring to several differences and troubles lately risen between them; and for a final conclusion of settled peace and amity between the said sachems, their heirs and successors forever, and the governors of the said Massachusetts and Connecticut, and their successors in the said governments forever.

I. That all and every of the sachems shall from time to time carefully seize, and living or dead deliver unto one or other of the above said governments, all and every of sachem Philip's subjects whatsoever, that shall come, or be found within the precinct of any other lands, and that with great diligence and faithfulness.

II. That they shall with their utmost ability use all acts of hostility against the said Philip and his subjects, entering his lands or any other lands of the English, to kill and destroy the said enemy, until a cessation from war with the said enemy be concluded by both the abovesaid colonies.

III. That the said sachems, by themselves and their agents, shall carefully search out and deliver all stolen goods whatsoever taken by any of their subjects from any of the English, whether formerly or lately, and shall make full satisfaction for all wrongs or injuries done to the estate of any of the subjects of the several colonies, according to the judgment of indifferent men, in case of dissatisfaction between the offenders and the offended parties, or deliver the offenders.

IV. That all preparations for war or acts of hostility against any of the English subjecti, shall forever for the future cease; together with all manner of thefts, pilferings, killing of cattle, or any manner of breach of peace whatsoever shall with the utmost care be prevented, and instead thereof, their strength to be used as a guard round about the Narraganset country, for the English inhabitants safety and security.

V. In token of the abovesaid sachems' reality in this treaty and conclusion, and for the security of the several English governments and subjects, they do freely deliver unto the abovesaid gentlemen, in the behalf of the abovesaid colonies, John Wobequod, Weowthim, Pewkes, Weenew, four of their nearest kinsmeu and choice friends, to be and remain as hostages in several places of the English jurisdictions, at the appointment of the honourable governors of the abovesaid colonies, there to be civilly treated, not as prisoners, but otherwise at their honour's discretion, until the abovesaid articles are fully accomplished to the satisfaction of the several governments, the departure of any of them

* The main land over against the easterly end of Rhode Island, where now Tiverston is, was called Pocasset.

in the meantime to be accounted a breach of the peace, and of these present articles.

VI. The said gentleman in the behalf of the governments to which they belong, do engage to every the said sachems and their subjects, that if they or any of them shall seize and bring into either of the abovesaid English governments, or to Mr. Smith inhabitant of Narraganset, Philip Sachem alive, he or they so delivering, shall receive for their pains, forty trucking cloth coats, in case they bring his head, they shall have twenty like good coats paid them: For every living subject of said Philip's so delivered, the deliverer shall receive two coats, and for every head one coat, as a gratuity for their service herein, making it appear to satisfaction, that the heads or persons are belonging to the enemy, and that they are of their seizure.

VII. The said sachems do renew and confirm unto the English inhabitants or others, all former grants, sales, bargains or conveyances of lands, meadows, timber, grass, stones, or whatever else the English have heretofore bought or quietly possessed and enjoyed, to be unto them, and their heirs, and assigns forever; as also all former articles made with the confederate colonies.

Lastly, The said counsellors and attornies do premeditately, seriously, and upon good advice covenant, and conclude and agree all abovesaid solemnly, and call God to witness they are, and shall remain true friends to the English governments, and perform the above said articles puntually, using their utmost endeavour, care and faithfulness therein: In witness whereof they have set their hands and seals.

Petaquamscot, July, 15, 1675.

Tawageson, his C mark

During this treaty of peace with the Narragansetts, Capt. Cudworth with the forces from Plymouth, under his command, found something to do nearer home, though of another nature as it proved, viz. to make war whilst the others were (as they thought) making peace: in the first place therefore he dispatched Capt. Fuller (joining Lieut. Church together with him in commission) with fifty in his company to Pocasset, on the same account, as the other went to Narraganset; either to conclude a peace with them, if they would continue friends, and give hostages for the confirmation thereof, or fight them if they should declare themselves enemies, and join with Philip; himself intending to draw down his forces to Rehoboth, to be ready for a speedy march to Taunton, and so down into the other side of the country, upon the news that some of the enemy were burning and spoiling Middleborough and Dartmouth, two small villages lying in the way betwixt Pocasset and Plymouth. Upon Thursday, July 7th, Capt. Fuller and Lieutenant Church went into Pocasset to seek after the enemy, or else as occasion might serve to treat with those Indians at Pocasset, with whom Mr. Church was very well acquainted, always holding good correspondence with them. After they had spent that day and most of the night, in traversing the said Pocasset neck, and watching all night in a house which they found there, they could hear no tidings of any Indians; insomuch that Capt. Fuller began to be weary of his design: Mr. Church in the meanwhile assuring him that they should find Indians before it were long, yet for greater expedition they divided their company, Capt. Fuller taking down toward the sea side, where it seems, after a little skirmishing with them wherein one man only received a small wound, he either saw or heard too many Indians for himself and his company to deal with, which made him and them betake themselves to a house near the water side, from whence they were fetched off by a sloop before night, to Rhode Island. Capt. Church (for so he may well be styled after this time) marched further into the neck, imagining that if there were Indians in the neck, they should find them about a pease field not far off. As soon as they came near the said field he espied two Indians among the pease, who also at the same time espied him; and presently making some kind of shout, a great number of Indians came about the field, pursuing the said Capt. Church and his men in great numbers to the sea side: there being not above fifteen with Church, yet seven or eight score of Indians pursuing after them. Now was fit time for this young captain and his small company to handsel their valour upon this great rout of Indians, just ready to devour them: but victory stands no more in the number of soldiers, than verity in the plurality of voices: and although some of these fifteen had scarce courage enough for themselves, yet their captain had enough for himself, and some to spare for his friends, which he there had an opportunity of improving to the full. When he saw the hearts of any of his followers to fail, he would bid them be of good courage and fight stoutly, and (possibly by some divine impression upon his heart) assured them not a bullet of the enemy should hurt any one of them: which one of the company more dismayed than the rest could hardly believe, till he saw the proof of it in his own person, for the captain perceiving the man was not able to fight, made him gather rocks together for a kind of shelter and barricado for the rest, that must either of necessity fight or fall by the enemies. It chanced as this faint hearted soldier had a flat stone in his arms, and was carrying to the shelter that he was making upon the bank, a bullet of the enemy was thus warded from his body by which he must else have perished, which experience put new life into him, so as he followed his business very manfully afterward, insomuch that they defended themselves under a small shelter hastily made up, all that afternoon, not one being either slain or wounded, yet it was certainly known that they killed at least fifteen of their enemies: and at the last when they had spent all their ammunition, and made their guns unserviceable by often firing, they were fetched all off by Capt. Goldings sloop and carried safe to Rhode Island in spite of all their enemies: yea, such was the bold and undaunted courage of this champion, Capt. Church, not willing to leave any token behind of their flying for want of courage, he went back in the face of his enemies to fetch his hat, which he had left at a spring, whither the extreme heat of the weather, and his labour in fighting had caused him to repair for the quenching of his thirst an hour or two before. It seems in the former part of the same day, five men coming from Rhode Island, to look up their cattle upon Pocasset neck, were assaulted by the same Indians; one of the five was Capt. Church's servant, who had his leg broke in the skirmish, the rest hardly escaping with their lives: this was the first time that ever any mischief was done by the Indians upon Pocasset neck. Those of Rhode Island were hereby alarmed to look to themselves, as well as the rest of the English of Plymouth, or the Massachusetts colony.

This assault rather heightened and increased than daunted the courage of Capt. Church; for not making a cowardly flight, but a fair retreat, which providence offered him by the sloop aforesaid, after his ammunition was spent, he did not stay long at Rhode Island, but hastened over to the Massachusetts forces, and borrowing three files of men of Capt. Henchman with his lieutenant; Mr. Church and he returned again to Pocasset, where they had another skirmish with the enemy, wherein some few of them (fourteen or fifteen) were slain, which struck such a terror into Philip, that he betook himself to the swamps about Pocasset, where he lay hid till the return of the rest of the forces from the Narragansets, like a wild boar kept at bay by this small party till more hands came up.

Thus were the Plymouth forces busied, during the time of the treaty with the Narragansetts, which being issued as it was:

On Friday July 15, our forces marched for and arrived at Rehoboth, where having no intelligence of the enemy nearer than a great swamp on Pocasset, eighteen miles from Taunton; they marched next day twelve miles to a house at Metapoiset (a small neck of land in the bottom of Taunton Bay, in the midway between Mount Hope and Pocasset Neck) from whence they marched for Taunton, July 17, whither after a tedious march of 20 miles, they came in the evening, and found the people generally gathered into eight garrison houses.

On Monday, July 18, they marched 18 miles before they could reach the swamp where the enemy was lodged: as soon as they came to the place, Plymouth forces being now joined with them, our soldiers resolutely entered in amongst the enemies, who took the advantage of the thick under-wood, to make a shot at them that first entered, whereby five were killed outright, seven more wounded, some of whose wounds proved mortal: after the first shot, the enemy retired deeper into the swamp, deserting their wigwams (about 100 in all) newly made of green bark, so as they would not burn: in one of them they found an old man, who confessed that Philip had been lately there. Having spent some time in searching the swamp, and tired themselves to no purpose, (yet it was said that one half hour more would have at that time utterly subdued Philip and all his power) the commander in chief, night drawing on apace, not thinking it safe to tarry longer in so dangerous

a place, where every one was in as much danger of his fellows as his foes, being ready to fire upon every bush they saw move, supposing Indians were there, ordered a retreat to be sounded, that they might have time to dispose of their dead and wounded men, which accordingly was attended to;* Plymouth forces who had entered in the rear, returning in the front, it was judged that the enemy being by this means brought into a pound, it would be no hard matter to deal with them, and that it would be needless charge to keep so many companies of soldiers together to wait upon such an inconsiderable enemy, now almost as good as taken; whereupon most of the companies belonging to Massachusetts were drawn off, only Capt. Henchman with 100 foot being left there together with the Plymouth forces, to attend the enemy's motion, being judged sufficient for that end. Major Savage, Capt. Paige, with Capt. Mosely and their companies returned to Boston: Capt. Prentice with his troop were ordered towards Mendham, where it seems, about the middle of July, some Indians, wishing well to Philip's design, had made an assault upon some of the inhabitants, as they were at labour in the field, killing five or six of them; as soon as they had done, flying away into the woods, so as they could not easily be pursued. The inhabitants of the same village, lying in the heart of the enemy's country, began to be discouraged, so as within a little time after, they forsook the place, abandoning their houses to the fury of the enemy, which by them were soon after turned into ashes. But to return to King Philip, who was now lodged in the great swamp upon Pocasset neck, of seven miles long: Capt. Henchman and the Plymouth forces kept a diligent eye upon the enemy, but were not willing to run into the mire and dirt after them in a dark swamp, being taught by late experience how dangerous it is to fight in such dismal woods, when their eyes were muffled with the leaves, and their arms pinioned with the thick boughs of the trees, as their feet were continually shackled with the roots spreading every way in those boggy woods. It is ill fighting with a wild beast in his own den.—They resolved therefore to starve them out of the swamp, where they knew full well they could not long subsist: to that end they began to build a fort, as it were to beleaguer the enemy, and prevent his escape out of the place, where they thought they had him fast enough. Philip in the meantime was not ignorant of what was doing without, and was ready therein to read his own doom, if he tarried much longer there, he knew he should fall into their hands, from whom he could expect no mercy: the case therefore being desperate, he resolved with an hundred or two of his best fighting men to make an escape by the water, all passages by the land being sufficiently guarded by the English forces. The swamp where they were lodged being not far from an arm of the sea, coming up to Taunton, they taking the advantage of a low tide, either waded over one night in the end of July, or else wafted themselves over upon small rafts of timber, very early before break of day, by which means the greatest part of his company escaped away into the woods, leading into the Nipmuck country, altogether unknown to the English forces that lay encamped on the other side of the swamp. About one hundred more of the women and children which were likely to be rather burdensome than serviceable, were left behind, who soon after resigned up themselves to the mercy of the English. Philip's escape thus from Pocasset could not long be concealed after the day appeared, there being much champaign land through which he was to pass, and being discovered by the inhabitants of Rehoboth, they presently followed him, together with a party of the Mohegins, that a little before came to Boston, offering their services against Philip, and were sent into those parts to be ordered by Capt. Henchman, but before they came to him were easily persuaded to go along with any of the English that were engaged in the pursuit of Philip. News also thereof was carried to Capt. Henchman, who as soon as he could get over with six files of men (rowing hard all or most part of the day to get to Providence) followed after the enemy. The Mohegins with the men of Rehoboth, and some of Providence came upon their rear over night slew about 30 of them, took much plunder from them, without any considerable loss to the English. Capt. Henchman came not up to them (pursuing them only by the track) till the skirmish was over, and having marched 22 miles that day, was not well able to go any further that night; on the other hand, the forces that came from Rehoboth and those belonging to Plymouth, having left their horses three miles off, could not go back to fetch them without much loss of time, and therefore looking at it altogether bootless to go after them in the morning, returned back the next day, leaving Captain Henchman with his six files, and the Mohegins to pursue the chase to Nipsachet, which he did the next morning. Capt. Henchman, that he might the better engage the Mohegins to march with him 30 miles, gave them half his provision, and was himself recruited again by the care of Capt Edmunds of Providence, Lieut. Brown who brought provision after him to the Nipmuck forts. Mr. Newman the minister of Rehoboth, deserved not a little commendation for exciting his neighbours and friends to pursue thus far after Philip animating of them by by his own example and presence: but why Philip was followed no further, it is better to suspend than too critically inquire. This is now a third time when a good opportunity of suppressing the rebellion of the Indians, was put into the hands of the English; but time and chance happeneth to all men, so that the most likely means are often frustrated of their desired end. All human endeavours shall arrive at no other success, than the counsel of God hath pre-ordained, that no flesh might glory in their own wisdom, but give unto God the praise of all their successes, and quietly bear whatever miscarriages he hath ordered to befal them. It appears by the issue of these things, that although this wound was not incurable, yet much more blood must be taken away before it could be healed. But by this means Philip escaped away to the westward, kindling the flame of war in all the western plantations of the Massachusetts colony wherever he came, so that by this fatal accident the fire that was in a likely way to be extinguised, as soon almost as it began, did on a sudden break out through the whole jurisdiction of Massachusetts colony, both eastward and westward, endangering also the neighbouring colony of Connecticut, which hath also suffered somewhat by the fury of this flame, though not considerable to what the other colonies have undergone.

While things after this manner proceeded in and about the colony of Plymouth, the commissioners of the rest of the colonies were consulting and advising what was to be done to prevent the mischief threatened from spreading any further, fearing, (as indeed there was too much cause) that although Philip only appeared to make the first attempt, yet more either already were, or soon might be persuaded to join with him in acting this bloody tragedy.

It hath been already declared what hath been done for the securing of the Narragansets, those that were sent as messengers on that errand, always reported that the elder people were in appearance, not only inclinable to peace, but seemed very desirable thereof, insomuch as their two elder sachems expressed much joy when it was concluded; but as since hath appeared, all was but to gain time, and cover their treacherous intents and purposes, that they might in the next spring fall upon the English plantations all at once, as some prisoners lately brought in have owned and confessed; nor have any of those Indians with whom the present war hath been, ever regarded any agreements of peace made with the English, further than necessity and slavish fear compelled thereunto, as may be seen by the records of the united colonies from the year 1643 to the present time, notwithstanding all their fair pretences; for Ninigret, the old sachem of the Narragansetts, who alone of all the rest of that country sachems disowned the present war, and refused to have any hand therein, had threatened, as was proved to his face before the commissioners, in the years 1646 and 1647, that they would carry on the war against the Mohegins, whatever were the mind of the commissioners, and that they would kill the English cattle, and heap them up as high as their wigwams, and that an Englishman should not stir out of his door but they should kill him; all which he could not deny, yet this old fox made them promises of peace, when the dread of the English ever since the Pequod war moved him thereunto; forseeing as he is said to have told his neighbours, that they would all be ruined if they made war with the English, as is since come to pass. However, the good hand of God was seen in so ordering things, that the Narragansets were for the present restrained from breaking out into open hostility against the English, at the time when Philip began; which if they had then done, according to the eye of reason, it would have been very difficult, if possible, for the English to have saved any of their inland plantations from being destroyed. Thus, although God hath in his wisdom suffered so much of the rage of the heathen to be let loose against this people here, as sorely to scourge them, that by the wrath of men praise might be yielded to his holy name, yet hath he in his abundant goodness restrained the remainder that it should not consume.

The next thing in order to be related is the calamity that befel the village of Brookfield,

* The English lost fifteen men in this expedition—Hutchinson.

which, notwithstanding all the care that was taken, fell into the hands of the perfidious Ninpet Indians, as shall here in the next place be declared; only as we pass along, to remind the reader in a few words, what was the issue of Capt. Henchman's pursuit of Philip. The Plymouth forces being returned home, as was said before, Capt. Henchman with his six file of men, and the Mohegin Indians, having continued in the pursuit of Philip till they had spent all their provision, and tired themselves, yet never coming within sight of him, the Mohegin Indians in their company directed them to Mendham, and then leaving them, returned also to their own country. Capt. Henchman in his march towards Mendham, or at Mendham, met with Capt. Mosely coming to bring him provision, and advertising him of what success he had met with in his pursuit, they altered their course, for Capt. Henchman was sent down to the governor and council, to know what they should do: They presently remanded him to Pocasset, and ordered him to stay there if there was need, or else to draw off, surrendering the fort he had been building to the Plymouth forces, which last was chosen by those of Plymouth, whereupon Captain Henchman returning to Boston, was ordered to disband his men. Captain Mosely was ordered to march to Quabaog or Brookfield, where he continued awhile, with the other captains sent up for the relief of the people there, and to seek after the enemy in those woods; but after some time spent in ranging the country thereabouts, not meeting with any of the infidels, he with his company came downwards, searching the woods betwixt Lancaster (where a man and his wife with two children were slain on the Lord's day, Aug. 22) and Marlboro', where also a lad keeping sheep was shot at by an Indian that wore a sign, as if he had been a friend: the Indian was supposed to belong to the Hassanemesit Indians, at that time confined in Marlborough, where they had liberty to dwell in a kind of fort. The next day the inhabitants sent to demand their guns; Capt. Mosely acquainted therewith, marched to the fort and found much suspicion against eleven of them, for singing and dancing, and having bullets and slugs, and much powder hid in their baskets; insomuch that eleven of them were sent down prisoners to Boston, upon suspicion that they had had a hand in killing the four at Lancaster, and shooting at the Marlborough shephard: But upon trial, the said prisoners were all of them acquitted of the fact, and were either released, or else were, with others of that fort, sent for better security, and for preventing further trouble of the like kind, to some of the islands below Boston toward Nantasket.

About this time Capt. Mosely was sent with a company of soldiers to some Indian plantations upon Merrimac river, as high as Pennycook, but they found no Indians there; those that belonged to the place having withdrawn themselves from their native place, that they might not meddle in the present quarrel, as is confidently believed that Woonalonset the sachem of that company had so resolved. That coast being clear of the enemies, Capt. Mosely soon after was sent up with his men to the towns westward about Hadley, if it might be, to subdue the enemy, who a little before, and at that time, was doing all the mischief he could in those western plantations, both by fire and sword.

But to return and pursue the rebellious Indians, and keep pace with them in our history, though our forces as yet could never overtake them in the woods. The governor and council of Massachusetts were sensible of as much danger from the Nipnet Indians, as from the former; they being the inland part of the country betwixt the sea coast and Connecticut river westward, and the towns about the Massachusetts bay eastward, whereupon some persons that used to trade with the said Nipnets, were sent to sound them, and find how they stood affected, for which also there was the more reason, because they were always in subjection to the sachem of Mount Hope, and so were the more like to engage in the present quarrel; of which there had been sufficient proof already; when 14th of July, some of the Nipnet Indians next bordering on Philip's country set upon some of the inhabitants of Mendham,* where they killed four or five persons, which was the first mischief done upon any of the inhabitants within the jurisdiction of Massachusetts, acted as was said by one Matoonas, who was father to him that had committed a murder soon after Philip's first rebellion, Anno. 1671. The messenger that was sent thither, brought word back that they found the said Indians wavering: the young men very surly and insolent, the elder ones shewing some inclination to maintain the wonted peace. Soon after, July 28, 1675, Capt. Wheeler was sent to assist Capt. Hutchinson with a party of 20 horse to treat further about the peace, who going first to Quabaog, or Brookfield, (a town situate about 60 or 70 miles from Boston, in the road of Connecticut, lying about 25 miles from the said river, and not far distant from the chief seat of the Nipnet Indians) the inhabitants of the said Brookfield had been so deluded by those treacherous villains, that fearing no danger, they obtained of those Nipnets, the promise of a treaty upon the 2d of August; whereupon some of the chief of the town rode along unarmed with the said Wheeler and Hutchinson, with their party of horse, until they came to the place appointed; but finding no Indians, so secure were they, that they ventured along further, to find the infidels at their chief town, never suspecting the least danger, but when they had rode four or five miles that way, they fell into an ambush of two or three hundred Indians, laid in such a narrow passage, betwixt a steep hill on the one hand, and an hideous swamp on the other, that it was scarce possible for any of them to escape, eight of them being shot down upon the place (whereof three were of Brookfield) and three mortally wounded, whereof Capt. Hutchinson was one; Capt. Wheeler was also near losing his life, whose horse was shot down under him and himself shot through the body, so that all manner of hopes to escape had been removed from him, had it not been for his son, who was, by God's good providence, near or next unto him, this son being of undaunted courage, (notwithstanding his own arm was broken with a bullet) with great nimbleness and agility of body dismounted himself, and speedily mounted his father upon his own horse, himself getting upon another, whose master was killed, by which means they both escaped, and were afterwards cured. Much ado had those that were left alive to recover Brookfield, which in all probabilty they would never have done (the common road being waylaid with Indians on every side as was afterwards known) had it not been for one well acquainted with those woods, who led them in a by path, by which means they got thither a little before the Indians, who quickly came flocking into the town, with full intent to destroy it with fire and sword. But by special providence the inhabitants were all gathered to the principal house of the village (there being scarce 20 in the town) before the barbarous miscreants came upon them, immediately setting fire upon all the dwelling houses with most of the other buildings in the town, save that one into which the inhabitants were retired which they several times attempted to burn, but were almost miraculously defeated of their purpose by the immediate hand of God. In the mount of the Lord it shall be seen. For when they had for two days assaulted that poor handful of helpless people, both night and day pouring in shot upon them incessantly with guns, and also thrusting poles with fire brands, and rags dipt in brimstone tied to the ends of them to fire the house; at last they used this devilish stratagem, to fill a cart with hemp, flax and other combustible matter, and so thrusting it backward with poles spliced together a great length, after they had kindled it; but as soon as it had begun to take fire, a storm of rain unexpectedly falling, or else all the poor people, about 70 souls, would either have been consumed by merciless flames, or else have fallen into the hands of their cruel enemies, like wolves continually yelling and gaping for their prey.

Thus was that distressed company strangely delivered, who have forever cause to say with the Psalmist, blessed be the Lord, who hath not given us a prey to their teeth, our soul is escaped as a bird out of the snare of the fowlers, the snare is broken and we are escaped. For the next night Major Willard, by accident, hearing of the danger the people were in, came with forty-eight dragoons to their relief. The occasion which brought Major Willard, and Capt. Parker of Groton with forty-six more, so timely to their relief, was this; Major Willard in pursuance of his commission from the governor and council, was upon Wednesday, August 4th, in the morning, marching out after some Indians to the westward, to secure them: just as they were setting forth, some of the people of Marlborough, who had intelligence (by those that were going to Connecticut, and forced to return) what distress Brookfield was in, and knowing of Major Willard's purpose to go out that morning from Lancaster, sent a post to acquaint him therewith, which, though it did not find him in the town, yet overtook him before he had gone four or five miles from the place: whereupon, conceiving it more needful to succour Brookgeld in so imminent danger, than to proceed further upon his intended design, he altered his course and marched directly thither, being about 30 miles distant when the tidings were brought him; so he arrived there that night very seasonably, about an hour after it was dark, or else in all probability they had all

* A town situate northward from Mount Hope, within 36 miles of Boston.

perished before the relief sent up from Boston could have reached them, which was not till three days after. The providence of God likewise in bringing in the said major so safely, as well as seasonably to their relief was very remarkable: for the Indians had subtly contrived to cut off all relief sent before it could come at them, by laying ambushes, and placing their scouts at two or three miles distance round the town: about an hundred of them were lodged at an house not far off in the way toward Boston, to cut off any succour that might come from thence; but it is supposed they were so intense upon the project they were about for firing the house, concluding it would without fail take place, that either they did not mind their business of watching, or made such a noise for joy thereof, that they did not hear their centinels when they shot off their guns, at two miles distance. It is said that another party of the Indians let the major and his company purposely pass by them, without any opposition, waiting for the blow to be given at their first approach near the house, purposing themselves to have fallen upon their rear, and so to have cut them all off, before the besieged understood any thing thereof. But it pleased God so to order things in providence, that no notice was taken of them by the besiegers, nor were they at all discerned by them, till they had made themselves known to their friends; and were admitted within the court of God. When the enemy had notice of it they poured in their shot abundantly upon them; but they were now sheltered from the danger thereof; only it seems their horses were exposed to their fury, as many of them were maimed and killed, as were most of the cattle belonging to the inhabitants of the place soon after. This honoured person, Major Willard, continued at Brookfield, after this famous exploit for the preservation of the poor besieged there, divers weeks, to order such companies as were sent up that way for the securing the plantations on that side of the country; and not long after he went himself also to Hadley upon the like service of the country in the present war; but after sometime spent in those parts, he returned back to his own place, to order the affairs of his own regiment, much needing his presence, and leaving the forces about Hadley under the command of the major of that regiment.

But to return to what was in hand before: after the Indians understood that succours were come in to the besieged, they fired all that they had left standing for their own shelter, while they had besieged the place before mentioned, and ran all away into their own dens, in the neighbouring woods: however, it was confessed by one of themselves, that the enemy had 80 of their men killed and wounded in this business. But ere we pass any further in pursuit of the history of these matters, it will not be amiss to let the reader understand the horrible, perfidious and treacherous dealings of those Nipnet Indians, who although of all other they had the least reason as to any pretence of injury, yet did most deceitfully and barbarously join with Philip and his Indians, after they had been several times sent unto by the governor and council of Massachusetts, by the advice of Plymouth, to have prevented their rising, as well as the rising of the Narragansets, and also had faithfully promised not to meddle in the quarrel, as may more fully appear by the engagement under the hands of their sachems, sometime before Capt. Hutchinson and Capt. Wheeler were sent up to them, which by reason of the haste and unskilfulness of the messengers on that behalf sent, is not so fit for public view: but the account of it from their return, was under their hand and oath, July 24, 1675, when Lieut. Ephraim Curtice spake with five of the Nipnet sachems, four too many to govern so small a people, but lying upon the head of the principal Indian territories they were, divided into so many small parties, two of whom, viz. Sam, sachem of Weshacum, and Netaump, were executed together afterwards at Boston. All of them did at that time solemnly renew their covenant and promise under their hands to come to Boston to speak further with the governor; instead of which, what they perfidiously did against Captain Hutchinson and others, hath already been declared.

Upon the report of this sad disaster that befel the inhabitants of Brookfield, forces were sent up under the command of Capt. Lathrop and others, to pursue after those Indians harbouring about those places, and if it might be to prevent them from joining with the Indians upon Connecticut river, who as yet had not discovered themselves as willing to espouse Philip's interest, but rather made some semblance to the contrary. There was much time spent by Major Willard, and several companies of soldiers left under his command, about the Nipnet country, but all to no purpose, for partly by the treachery of some of the Indians that came to their assistance, that seemed to favour the English, but rather acted in behalf of the enemy, partly by the subtleties of the enemies themselves, who could easily by their scouts discern the approach of our soldiers, and by the nimbleness of their feet escape them, our soldiers could never meet with any of them, but only by that means driving them further westward, they gathered all the Indians they could to their party about Pecomptuck, alias Deersfield, Swanscot, and Squeakeag, where some plantations of the English newly began, whom they assaulted in the next place, and did what mischief they could upon them.

It is here to be noted, that although that worthy patriot and experienced soldier, Major Willard, hearing of the distress of Brookfield by some that were travelling to Connecticut, was the first that relieved the distressed people of Quabaog or Brookfield, yet Major Pynchon of Springfield also by accident hearing of their calamity, had not only sent word thereof to Hartford, (from whom he received a supply of 25 or 30 soldiers under Capt. Watts, but did also send a band of men under Lieut. Cooper (afterwards villainously slain by the Springfield Indians) who, with those sent from Hartford, and some Indians belonging to Springfield) seemingly forward to help the English) made up four score or thereabouts: these marched down to Brookfield the same day that Capt. Lothrop and Capt. Beers came up from Massachusetts who having spent sometime in searching the woods about Springfield, and finding none of the Indians did the next day march up to a place called Meminimisset by the Indians, where Capt. Hutchinson and Capt. Wheeler were assaulted, and finding no sign of any Indians amongst those woods and swamps, the company that came from Springfield, left the soldiers (who returned to their quarters at Brookfield) and and went up themselves further northward, at least 20 miles from the said Brookfield, and finding no track of Indians in all those woods, they returned back to Springfield, leaving enough to defend the people of Brookfield, and the garrison there.

By this it appears, that the Indians by this occasion were driven more westward into the woods between Hadley and Squakhead,* where they soon effected their design, viz. to leaven the Indians on that side the country with the same prejudice and malice against the English, with which they themselves were (though without cause) embittered; for in a few days the device took place amonst the Hadley and Deerfield Indians, and was presently put in execution by the said Indians withdrawing form the English and assisting Philip and the Nipnets to spoil and destroy all the towns westward, as soon after came to pass: yet at the first some of the Hadley Indians pretended real friendship to the English, and offered themselves to fight against Philip, but the Mohegin Indians that came afterward from Hartford began to suspect the treachery of the other, and told the English plainly, that no good would be done, while any of that company went along with them in pursuit of the enemy, for as was said, they would always give some shout when they came near the enemy, as if they should thereby wish them to look to themselves: insomuch that the said Hadley Indians fell into great suspicion with the English, and for a proof of their fidelity, they were required to bring in their arms to the English, but that very night they fled away from their dwellings which was in a wooden fortification, within a mile of Hatfield, whereby they plainly discovered that they had secretly plotted to join with Philip's party, as far as they had secretly plotted to join with Philip's party, as far as they had an opportunity to do them any eminent service. Some think the English failed in point of prudence, not managing that business so warily as they might, which if they had done, their defection had been prevented, but it is most probable that Philip had hired them to his own quarrel, by sending them gifts in the spring; and that the body of the said Indians were most readily inclined thereunto: but the sachems and the elder ones of them, seemed loth at first to engage against the English. In the conclusion, when they had so falsely left their dwellings, and were running after Philip and the Nipnet Indians (at that time harboured in those woods) the English were so provoked that were under Capts. Lothrop and Beers, that they pursued after them very early the next morning, and overtook them about ten miles above Hatfield, at a place called Sugarloaf hill, and had a small skirmish with them, wherein there were nine or ten of the English slain, and about 26 Indians: yet the rest escaped, and so joined with Philip and his compresently after which accident, they were so emboldened, that upon the first of Sept. about seven days after, they set upon Deerfield, killed one man, and laid most of the houses in ashes. About two or three days after they fell upon Squakeag, another new plantation.

* Northfield, fifty miles up the river from Hadley.

fifteen miles higher up the river, above Deerfield, where they killed nine or ten of the people, the rest hardly escaped into the garrison house.

The next day, this disaster not being known, Capt. Beers, for fear of the worst, with 36 men, was sent up to the said Squakeag, with supplies both of men and provisions to secure the small garrison there, but before they came very near the town, they were set upon by many hundreds of Indians out of the bushes by a swamp side. By this sudden surprisal, Capt. Beers (who was known to fight valiantly to the very last) with about 20 of his men, were slain, the rest flying back to Hadley. Here the barbarous villains showed their insolent rage and cruelty, more than ever before, cutting off the heads of some of the slain, and and fixing them upon poles near the highway, and not only so, but one (if not more) was found with a chain hooked into his under jaw, and so hung up on the bough of a tree, (it is feared he was hung up alive) by which means they thought to daunt and discourage any that might come to their relief, and also to terrify those that should be the spectators of so sad an object; insomuch that Major Treat, with his company, going up two days after to fetch off the residue of the garrison, were solemnly affected with that doleful sight, which made them make the more haste to bring down the garrison, not waiting for any opportunity to take revenge upon the enemy, having but 100 with him, too few for such a purpose. Capt. Appleton going up after him, met him coming down, and would willingly have persuaded them to have turned back, to see if they could have made any spoil upon the enemy, but the greater part advised to the contrary, so that they were all forced to return with what they could carry away, leaving the rest for a booty to the enemy, who shall ere long, pay a sad reckoning for their robberies and cruelties, in the time appointed: but the sufferings of the English were not as yet come to their height, for after they were come to Hadley, the commander in chief taking counsel with the officers of the soldiers, ordered them that were then present, to garrison the towns about; some to be at Northampton, Hatfield and Deerfield, and some to remain at Hadley, where were the head quarters of the English. But perceiving that little good was to be done upon the enemy in those parts, it was agreed that what corn was left at Deerfield, being threshed out as well as they could in those tumults (above 3000 bushels was supposed to be there standing in stack) should be brought to Hadley, and to wait further time to fight the enemy. It came to Capt. Lothrop's turn, or rather it was his choice with about 80 men to guard several carts laden with corn and other goods. The company under Capt. Mosely then quartering at Deerfield, intended that day to pursue after the enemy. But upon Sept. 18, that most fatal day, the saddest that ever befel New England, as the company under Capt. Lothrop were marching along with the carts, (it may be too securely) never apprehending danger so near, they were suddenly set upon and almost all cut off, (90 killed, teamsters included) not above 7 or 8 escaping; which great defeat came to pass by the unadvised proceedings of the captain who was himself slain in the first assault) although he wanted neither courage nor skill to lead his soldiers; but having taken up a wrong notion about the best way and manner of fighting with the Indians (which he was always wont to argue for) viz. that it were best to deal with the Indians in their own way, *i. e.* by skulking behind trees, and taking their aim at single persons, which is the usual manner of the Indians fighting one with another; but herein was his great mistake, in not considering the great disadvantage a smaller company would have in dealing that way with a greater multitude: for if five have to deal with one, they may surround him, and every one take his aim at him, while he can level at but one of his enemies at a time: which gross mistake of his, was the ruin of a choice company of young men, the very flower of the county of Essex, all culled out of the towns belonging to that county, none of which were ashamed to speak with the enemy in the gate: their dear relations at home mourning for them, like Rachel for her children, and would not be comforted, not only because they were not, but because they were so miserably lost. The like mistake was conceived to be the reason of the loss of the former persons slain with the said Lothrop, pursuing the Indians that ran away from Hadley, and of the 20 slain with Capt. Beers, men, who betook themselves, at first to the trees, and at the last a few got to their horses soon after the captain was shot down. For had he ordered his men to march in a body, as some of his fellow commanders, advised, either backward or forward, in reason they had not lost a quarter of the number of them that fell that day by the edge of the sword. For the Indians, notwithstanding their subtlety and cruelty, durst not look an Englishman in the face in the open field nor were they ever yet known to kill any man with their guns, unless when they could lie in wait for him in ambush, or behind some shelter, taking aim undiscovered; so that it was judged by those that escaped, that there were 7 or 800 Indians at least that encountered the company of 80 English, yet if they had kept together in a body, and fought marching, they might have escaped the numbers of the enemy, with little loss in comparison of what they sustained. For the valiant and successful Capt. Mosely, and his lieut. coming (though too late) to their rescue, marched through and through that great body of Indians, and yet came off with little or no loss in comparison of the other. And having fought all those Indians for five or six hours upon a march, lost not above two men all that while, nor received other damage except that 8 or 9 were wounded, who were carried to their quarters at night at Hadley, whereas if these had proceeded in the same way of fighting as Capt. Lothrop did in the morning, they might have been surrounded, and so have been served as the former were: but God had otherwise determined in his secret counsel, and therefore that was hid from the one, which was a means to preserve the other company.

Other relief was also seasonably sent in, viz. a company of English and Mohegin or Pequod Indians under the command of Major Treat, who was in the morning marching another way, viz. up toward Squakeag to seek after the enemy that way, with about 100 soldiers, Indians and English, upon whose approach, the enemy, pretty well acquainted by this last encounter with the valour of the English, immediately went clear away, giving Major Treat and Capt. Mosely, who returned to Deerfield that night, an opportunity to bury the slain the next day. As Capt Mosely came upon the Indians in the morning, he found them stripping the slain, amongst whom was one Robert Dutch, of Ipswich, having been sorely wounded by a bullet that raised to his skull, and then mauled by the Indian hatchets, was left for dead by the savages, and stript by them of all but his skin; yet when Capt. Mosely came near, he almost miraculously, as one raised from the dead, came towards the English, to their no small amazement; by whom being received and clothed, he was carried off to the next garrison, and is living and in perfect health at this day. May he be to the friends and relations of the rest of the slain an emblem of their more perfect resurrection at the last day to receive their crowns among the rest of the martyrs that have laid down and ventured their lives, as a testimony to the truth of their religion, as well as love to their country.

This sore defeat of Capt. Lothrop and his men, was the more to be lamented, in that (falling out so soon after two other of the like nature) it so emboldened the enemy, that they durst soon after adventure upon considerable towns, though well garrisoned with soldiers, and gave them occasion of most insolently braving the garrison at Deerfield the next day, hanging up the garments of the English in sight of the soldiers, yet on the other side of the river. However, it pleased God, who is always wont to remember his people in their low estate, to put such a restraint upon them, that when they passed very near the garrison house at Deerfield, wherein were not left above 27 soldiers) their captain using this stratagem, to cause his trumpet to sound, as if he had another troop near by to be called together, they turned another way and made no attempt upon the house where that small number was, which if they had done with any ordinary resolution, so small a handful of men could hardly have withstood the force of so many hundreds as were then gathered together.

What loss the enemy sustained by the resistance of Capt. Lothrop and his men, (who no doubt being all resolute young men, and seeing they should be forced by the hard law of the sword to forego their lives, held them at as high a rate as they could) is not certainly known. It hath since been confessed by some of the Indians themselves, that they lost 96 of their men that day. Capt. Mosely's men coming suddenly upon them when they were pillaging of the dead, fell upon them with such a smart assault, that they drove them presently into a swamp, following them so close, that for seven miles together, they fought them upon a march, charging them through and through. Perez Savage, and Mr. Pickering, his lieutenants, deserve no little part of the honour of that day's service, being sometimes called to lead the company in the front, while Capt. Mosely took a little breath, who was almost melted with labouring, commanding, and leading his men through the midst of the enemy.

The Indians gathered together in those parts, appearing so numerous, and, as might justly be supposed, growing more confident by some of their late successes, and the number of our men being after this sad rate dimin-

ished, recruits also not being suddenly expected, at so great a distance as an hundred miles from all supplies, the commander in chief with the officers, saw a necessity of fighting that garrison at Deerfield, employing the forces they had to secure and strengthen the three next towns below upon Connecticut river. And it was well that counsel was thought upon; for now those wretched caitiffs begin to talk of great matters, hoping that by degrees they might destroy all the towns thereabouts, as they had already begun: their hopes, no doubt, were not a little heigthened by the accession of the Springfield Indians to their party, who had in appearance all this time stood the firmest to the interest of the English of all the rest in those parts: but they all hanging together, like serpent's eggs, were easily persuaded to join with those of Hadley (there being so near alliance between them, for the sachem of the Springfield Indians was father of Hadley sachem) not only by the success of their treacherous and blood thirsty companions, but by the same inbred malice and antipathy against the English manners and religion.

The inhabitants of Springfield were not insensible of their danger, and therefore had upon the first breaking forth of those troubles been treating with their Indians, and had received from them the firmest assurance and pledges of their faithfulness and friendship that could be imagined or desired, both by covenant, promises, and hostages given for security, so as no doubt was left in any of their minds: yet did these faithless and ungrateful monsters plot with Philip's Indians to burn and destroy all Springfield, as they had done Brookfield before. To that end they sent cunningly and enticed away the hostages from Hartford, where they were perhaps too securely watched over, a day or two before: then receiving about three hundred of Philip's Indians into their fort, privately in the night time, so as they were neither discerned or suspected. Yea so confident were such of the inhabitants as were most conversant with the Indians at their fort, that they would not believe there was any such plot in hand, when it was strangely revealed by one Toto, an Indian at Windsor, (about 18 or 20 miles below Springfield, upon the same river) better affected to the English, and so by post tidings brought to Springfield the night before, insomuch that the lieutenant of the town, Cooper by name, was so far from believing the stratagem, that in the morning himself with another would venture to ride up to the fort, to see whether things were so or not. The fort was about a mile from the town; when he came within a little thereof, he met these bloody and deceitful monsters, newly issued out of their *Equus Trojanus* to act their intended mischief; they presently fired upon him, divers of them, and shot him in several places through the body, yet being a man of stout courage, he kept his horse till he recovered the next garrison house, his companion they shot dead upon the place; by this means giving a sad alarm to the town of their intended mischief, which was instantly fired in all places where there no garrisons. The poor people having not an officer to lead them being like sheep ready for the slaughter, and no doubt the whole town had been totally destroyed, but that a report of the plot being carried about over night, Major Treat came from Westfield time enough for their rescue, but wanting boats to transport his men, could not do so much as he desired. Major Pynchon coming from Hadley with Capt. Appleton and what forces they could bring along with them, 32 houses being first consumed, preserved the rest of the town from being turned to ashes, in which the over credulous inhabitants might now see (what before they would not now believe at the burning Major Pynchon's barns and stables a few days before, to the very great damage of the owner) the faithless and deceitful friendship among these perfidious, cruel and hellish monsters.

Among the ruins of the said dwellings, the saddest to behold was the house of Mr. Pelatiah Clover, minister of the town, furnished with a brave library, which he had but newly brought back from a garrison wherein it had been for some time before secured, but as if the danger had been over with them, the said minister, a great student, and an *hilluo librorum*, being impatient for want of his books, brought them back to his great sorrow, fit for a bonfire for the proud insulting enemy. Of all the mischiefs done by the said enemy before that day the burning of this town of Springfield did more than any other discover the said actors to be the children of the devil, full of all subtlety and malice, there having been for about 40 years so good correspondence betwixt the English of that town and the neighbouring Indians. But in them is made good what is said in the Psalm, That though their words were smoother than oil, yet were they drawn swords.

After some little time spent in garrisoning the place, and helping the inhabitants to secure what they had left, the English soldiers most of them returned back to Hadley, their head quarters, and Major Pynchon being so full of incumbrances, by reason of the late spoils done to himself, and his neighbours at Springfield, could not any longer attend the service of commanding in chief as he had done before, wherefore being according to his earnest request of the council eased of that burden; Capt. Samuel Appleton was ordered to succeed in taking the charge of the soldiers left in those upper towns, by whose industry, skill and courage, those towns were preserved from running the same fate with the rest, wholly or in part so lately turned into ashes. For the enemy growing very confident by the late successes, came with all their fury the 19th of October following upon Hatfield, hoping no less than to do the like mischief to them, they had done to Springfield. But according to the good Providence of Almighty God, Major Treat was newly returned to Northampton, Capt. Mosely and Capt. Poole were then garrisoning the said Hatfield, and Capt. Appleton for the like end quartering at Hadley, when on a sudden 7 or 800 of the enemy came upon the town in all quarters, having first killed or taken two or three scouts belonging to Capt. Mosely's company: but they were so well entertained on all hands where they attempted to break in upon the town, that they found it too hot for them. Major Appleton with great courage defending one end of the town, and Capt. Poole the other end; that they were by the resolution of the English instantly beaten off, without doing much harm. Capt. Appleton's serjeant was mortally wounded just by his side, another bullet passing through his own hair, by that whisper telling him that death was very near, but did him no other harm. Night coming on, it could not be discerned what loss the enemy sustained, divers were seen to fall, some run through a small river, others cast their guns into the water, it being their manner to venture as much to recover the dead bodies of their friends, as to defend them when alive.

At last after burning of some few barns with some other buildings, the enemy hasted away as fast as they came on, leaving the English to bless God who had so mercifully delivered them from the fury of their merciless foes, who had in conceit without doubt, devoured them all: But this resolute and valiant repulse, put such a check upon the pride of the enemy, that they made no further attempt upon any of those towns for the present, but winter drawing on, they retired all of them to their general rendezvous at Narraganset, plotting their general design of accomplishing their intended mischief against the English the next spring.

Our western plantations upon Connecticut river, the stage whereon were acted the most remarkable passages of this barbarous war hitherto, was soon after removed into many other places of the country in the winter and spring following, whither our discourse must in the next place pursue it. There was not any great matter acted by the enemy amongst the plantations upon the great river during the winter, after the assault made upon Hatfield, October 19th. It is evident that the body of them returned to Narraganset upon the approach of the winter, which set in more early than it used in other years. Where Philip bestowed himself in the winter season is not so certain; some say that he repaired further westward, to try his fortune with those Indians that lie towards Albany near the Dutch river: Others more probably conceive that he lay hid in some part of the Narraganset country; for though he was not certainly known to be about the fort at Narraganset, when it was taken by our forces in the winter, yet as soon as ever they were driven out of the country in February, he was found amongst them that did the mischief at Lancaster in that month.

Some straggling parties of them remained about Northampton, Westfield and Springfield sometime after their defeat at Hatfield: Seven or eight of the inhabitants of Northampton in the end of October, venturing to fetch in some of their harvest, that was left somewhere out of town, were in danger of being surprised, having laid their arms under their cart, so that being destitute of means to make their defence, they were glad to fly away with the horses out of their carts, leaving what they were about to the pleasure of the Indians that assaulted them. Major Treat upon hearing the alarm, presently repaired thither, but could not come time enough to destroy any of the enemy, nor yet to prevent their burning of four or five houses, with two or three barns that stood somewhat out of the town. Within a little time after they killed three of the same town, as they were at work in a meadow not far from the town: They intended also to have burned the mill, but it was too well guarded by two files of musketeers lodged there for the purpose, who put them beside their intent Six or seven persons

from Springfield soon after going to the mill at Westfield (that which belonged to their own being burned October 5th) and venturing without arms, three of them were killed by some of the enemy; who took the advantage also to burn four or five houses that belonged to the said Westfield: But by the end of November the coast was pretty clear of them, except some few of them that lay lurking in the swamps thereabouts all the winter, doing some small mischief upon some out dwellings of Springfield.

The expedition into the Narraganset country following in order in the next place to be related; but before we come thither, a little notice must be taken by the way, of an unsuccessful attempt upon the Indians about Hassanemesit* and Popachuog, whither Capt. Henchman was sent in the beginning of November; where also Capt. Still was ordered to meet him with another company from Cambridge, with intent to have beat up the Indian quarters in those parts: They being known to have had an hand in the outrages committed upon those that belonged to Marlborough and Mendham, cutting off the scalp of a miller's boy, who is yet alive.

November 1*st*, 1675.—Capt. Henchman marched out of Boston, intending to visit the Indians about Hassanemesit: The third day they saw some fires of the Indians, yet could not meet with those that made them: The 4th day they marched to some part of the Indian plantations called Hassanemesit: The captain would have taken up his quarters a mile on this side but some of his officers overruled him, to whose importunity he gave way, and marched a mile further towards the enemy, and by that means saved the miller's youth, taken the week before from Marlborough; for in the morning, very early, as the scouts were looking out they spied a wigwam, where some Indians that had carried away the youth, had lodged all night, or in some wigwam near by. When the Indians saw our soldiers, they hasted away and left the Marlborough youth behind them, who by that means escaped their hands. Our men under capt. Henchman marched on to Poppachuog, and finding the Indians all fled, (although they perceived by a messenger, accidentally sent back, that the Indians followed them all the way they marched) they came back to Mendham to settle things in that town. Some of the inhabitants informed them of some wigwams about ten miles off: The captain with Philip Curtice, his lieut. resolved to give them a camisado in their wigwams that night: To that end they mounted 22 upon horses, riding up ten miles into the woods, and when they came near the wigwams, they dismounted, and intended presently to march up, and give an assault upon them, after they had first gave a shout to fright the enemy: They ordered one half to follow the lieutenant, the other to follow the captain, when they came within a quarter of a mile of the place, their dogs began to bark, at which they stopped, and by marching again, intended presently to fire it upon them, but the captain's foot slipping, he could hardly recover himself, when suddenly looking behind him, he saw no man following him: The lieutenant had five behind him, who with those five resolutely fired on that side he was appointed to make the assault upon; but they were repulsed by the Indians, who firing out of their dens, shot down the lieutenant and another, the rest presently ran away to a fence: The captain with all vehemency urged them to stay; they replied, they went back only to charge, yet went clear away by which means, together with the cowardice of the former, so sad a loss befel the company, as could not easily be repaired: However the enemy presently deserted the wigwam and gave our men the next day an opportunity to fetch off their two dead men, and bury them, and so with grief and shame they were constrained to return to their quarters at Mendham, to whose inhabitants they gave notice of 200 bushels of corn belonging to the Indians, that might have been preserved, which for want of hands was lost by the fire, that the enemy might not be benefitted thereby. It appears by the foregoing passage that the time of our deliverance was not yet come, and that God had further trials to acquaint us with before he would turn his hand upon our enemies. But it pleased the Lord so to order things that they themselves fell into that pit they were digging for others, as shall appear more fully in what follows.

The English plantations about Hadley being for the present set a little at liberty by the Indians drawing off, like seamen after a storm, counted it their best course to repair their tackling against another that may be next coming, wherefore the inhabitants concluded it the safer way to make a kind of barricado about their towns, by setting up pallisadoes or cleft wood, about eight feet long, as it were to break the force of any sudden assault which the Indians might make upon them; which counsel proved very successful; for although it be an inconsiderable defence against a warlike enemy, that hath strength enough and confidence to besiege a place, yet it is sufficient to prevent any sudden assault of such a timorous and barbarous enemy as these were, for although they did afterwards in the spring break through these pallisadoes at Northampton, yet as soon as ever they began to be repulsed, they saw themselves like wolves in a pound, that they could not fly away at their pleasure, so they never ventured to break through afterwards upon any of the towns so secured.

As for those of Springfield they were now and then alarmed with a few skulking Indians lurking about in the adjacent woods; as once at the Long Meadow, where half a score of them were seen about an house remote from the town, who were pursued by a party of the English towards Windsor, and so escaped, after the English had made one shot upon them, not knowing certainly how many they killed. So at another time, a few of those barbarous wretches killed a poor man belonging to Springfield, as he was going to his house to look after his corn, on the other side of the river, and after they had killed the man they burnt down his house; yet attempted no further mischief on that part of the town that had escaped the fury of the flames, October 5. By which it is evident, that all the number of Indians that had assaulted them before, had withdrawn themselves now to their winter quarters, some to the Dutch river, but the greatest number of them to be sure were found in the winter at the Narraganset fort, where we shall leave them for the present till the forces of the united colonies shall fire them out of their nests.

The soldiers continuing some time at Hatfield after this victory, as we may well call it, (for it seems to have given the first check to the rage of the heathen within the jurisdiction of the united colonies, they have been observed ever since to have been on the losing hand, seldom or ever daring to meet our soldiers in the open field, unless when they had very great advantage as to their numbers or covert of the woods and bushes: Although like some raging beasts they have done much mischief several times since, when they were ready to expire, or when the pangs of death were coming upon them) our forces were all called home, save some left for garrisoning the towns thereabouts.

The commissioners of the united colonies taking into serious consideration the present state of things, viz. that there were before this time so many hundreds gathered together into one body, and that there was great reason to fear, if they were let alone till the next spring they might all rise together as one man round about us and that one after another might easily be destroyed, before any help could be despatched to them. On the one hand, the sharpness of the winter in these parts was well weighed, so extreme that it might hazard the loss of a thousand men in one night, if they were forced to lodge abroad in the open field; as also the difficulty, if not impossibility of sending any relief to them at any distance, the depth of snow usually making the ways impassable for divers months together.

On the other hand it was considered, that if the enemy were let alone till the next summer, it would be impossible to deal with them or find them any where, but they might waste one company of soldiers after another, as was seen by the experience of the former year Considering also that the Narragansets, the most numerous of all the rest, and the best provided for provision of all the other Indians, had now declared themselves our enemies, who if they were let alone till the winter was over, we should be unable to deal with so many enemies at once, that could on any occasion spread themselves like grasshoppers all over the country.

It was therefore finally agreed upon by the general consent of all, to fall upon the winter quarters of our enemies, by a more considerable army (if I may so call it) gathered out of all the three colonies, and that with all expedition, at farthest not to exceed the 10th of December, before they should have a thousand men in arms, ready for the design.

As for the late league made or rather renewed with the Narragansets, it was sufficiently evident and known, that they had all along from the first day when it was confirmed, broken every article of it, especially in not delivering up the enemies, which had sheltered themselves with them all this while, which though they did not positively deny, yet did nothing but find excuses, to defer it one week after another, till at last they would be excused till the next spring upon pretence that they could not before that time get them together. And besides the favouring of those that fled to them, and supplying the whole body of the

* Sometimes called Hassanamisco, now Grafton.

enemy with victuals, upon all occasions. It was likewise strongly suspected that in all the late proceedings of the enemy, many of their young men were known to be actually in arms against us, many of whom were found either wounded amongst them in their wigwams, or elsewhere occasionally seen returning back, after exploits abroad, to be healed of their wounds at home. Also some of our men's guns that were lost at Deerfield, were found in the fort when it was fired. Therefore all scruples as to the justness and necessity of the war being removed, the only question was, whether it were feasible and expedient in the winter. The exigence was very great, and the choice very hard: But as David when he was straitened with many difficulties at once, chose rather to fall into the hands of God whose mercies were great, though he might be provoked to cause his jealousy to smoke against those of his own heritage for a time; so in this exigence it was generally conceived to be most expedient for the country to cast themselves upon the providence of a merciful and gracious God, rather than by delays to expose themselves to the treachery and cruelty of a perfidious enemy.

A war, therefore, speedily to be carried on in the very depth of winter, being agreed upon, care was taken for supplies, as the difficulty of such an affair so circumstanced did require, though possibly not with so much necessary care and so suitable provisions, as had been desired, if what came afterwards to pass could have been forseen (which peradventure might be the reason things went on so heavily for want of well oiling the wheels) in the meantime a small army of a thousand fighting men, well appointed, were ordered by the commissioners to be gathered by proportion out of all the colonies, of which number the share of Massachusetts was to be 527, the rest were to be supplied out of Plymouth and Connecticut colonies: All other supplies were taken care for, as well as the suddenness of the expedition, and difficulty of the season would allow. The said thousand men besides some volunteers of Indian friends, were by the time and place appointed as near as could be had, called together, and a commission granted to the honourable Josiah Winslow, Esq. the present governor of Plymouth colony, a man of known ability and integrity, every way so well qualified with courage and resolution, as well as prudence and discretion, as might have preferred him to the conduct of a far greater army than ever is like to be gathered together in this part of the world, in this or the following generations. And indeed, as he was the first governor over any of the united colonies in New England, of them that were born in the place, so may be, he will pass for a pattern to the succeeding race, that may come after.

Under him as commander in chief, were ordered six companies from Massachusetts, under the command of Major Appleton, Captains Mosely, Gardiner, Davenport, Oliver, and Johnson; five companies from Connecticut under Major Treat, Captains Siely, Gallop, Mason, Watts, and Marshall; two companies from Plymouth under Major Bradford, and Captain Gorum.

Under the governor of Plymouth, as commander in chief in this expedition, were sent as major of the forces belonging to each colony; Major Robert Treat for the forces belonging to Connecticut, and Major Bradford for those of the colony of Plymouth, and Major Samuel Appleton, for those of Massachusetts, to whom by the honourable major-general of the colony, were six companies of foot; Delivered at Dedham, December the 9th, 1675, containing in number 465 fighting men, besides a troop of horse, under the command of Capt. Thomas Prentice, attending upon them. That night they marched to Woodcock's, about 27 miles from Dedham. The next night they arrived at Seaconk; Capt. Mosely and his company went from thence with Mr. Smith by water; the rest ferried over the water to Providence.

The next day, December 12th, they passed over Patuxet river, and then marching through Pomham's country, at night they met with Capt. Mosely and his company, at Mr. Smith's in Wickford, the place intended for their head quarters. Capt. Mosely in his way thither had happily surprised 36 Indians, one of whom he took along with him as a guide, Peter by name, that was at that time under some disgust with his countrymen, or his sachem, which made him prove the more real friend to our forces in that service, wherein he faithfully performed what he promised, and without his assistance our men would have been much at a loss to have found the enemy, until it had been too late to have fought them.

Two days after, December 14th, five files of men sent out under Serjeant Bennet, and another upon the scout killed one man and one woman, and brought in four more by one o'clock: The whole company marched after into some of the country, where they burnt 150 wigwams, killed 7 of the enemy, and brought in 8 prisoners when they returned at night.

The next day an Indian called Stone-wall John, pretended to come from the sachems, intimating their willingness to have peace with the English, yet could the messenger hardly forbear threatening, boasting of their numbers and their strength, adding withal that the English durst not fight them: Whatever were pretended by this treacherous fellow, some of his crew as he went home met with some of Capt. Gardiner's men, that were straggling about their own business, contrary to order, and slew his sergeant with one or two more. Two also of Capt. Oliver's men were killed in like manner; a solemn warning for soldiers not to be too venturous in an enemy's country. For preventing the like mischief upon other companies, more care was taken as they passed to the head quarters, some of the companies being lodged three miles therefrom. Capt. Mosely's, Capt. Davenport's, and Capt. Oliver's companies being also sent about that time to bring Major Appleton's to the general quarters, a few desperate Indians creeping under a stone wall near the place, fired twenty or thirty guns at Mosely in particular, a commander well known amongst them, but the rest of the company running down upon them, killed one and scattered the rest.

The next day Capt. Prentice with his troop, being sent to Pettyquamscot, returned with the sad news of burning Jerry Bull's garrison-house and killing 10 Englishmen and 5 women and children, but two escaped in all. This is the chance of war which they who undertook must prepare to undergo.

The next day brought from the same place a little better news, though not enough to balance the sorrow of their former, viz. that Connecticut forces were come thither with three hundred English, and an hundred and fifty Mohegins, ready fixed for war on the behalf of the English against the Narragansets, their mortal enemies; and by the way meeting a party of the enemy, they slew five or six of them and took as many prisoners. The whole number of all our forces being now come, the want of provision with the sharpness of the cold, minded them of expedition, wherefore, the very next day, the whole body of the Massachusetts and Plymouth forces marched away to Pettyquamscot, intending to engage the enemy upon the first opportunity that next offered itself: to which resolution those of Connecticut presently consented, as soon as they met together, which was about five o'clock in the afternoon. Bull's house, intended for their general rendezvous, being unhappily burnt down two or three days before, there was no shelter left either for officers or private soldiers, so as they were necessitated to march on toward the enemy through the snow in a cold stormy evening, finding no other defence all that night, save the open air, nor any other covering then a cold and moist fleece of snow. Through all these difficulties they marched from the break of the next day, December 19th, till one of the clock in the afternoon, without even fire to warm them, or respite to take any food, save what they could chew in their march. Thus having waded fourteen or fifteen miles through the country of the old Queen or Snake Squaw of Narraganset, they came at one o'clock upon the edge of the swamp, where their guide assured them they should find Indians enough before night.

Our forces chopping thus upon the seat of the enemy, upon a sudden, they had no time either to draw up in any order or form of battle, nor yet opportunity to consult where or how to assault. As they marched, Capt. Mosely and Capt. Davenport led the plan, Major Appleton and Capt. Oliver brought up the rear of Massachusetts forces: Gen. Winslow with the Plymouth forces marched in the centre; those of Connecticut came up in the rear of the whole body: but the frontiers discerning Indians in the swamp, fired immediately upon them, who answering our men in the same language, retired presently into the swamp, our men following them in amain, without staying for the word of command, as if every one were ambitious who should go first, never making any stand till they came to the sides of the fort, into which the Indians that first fired upon them betook themselves.

It seems that there was but one entrance into the fort, though the enemy found many ways to come out, but neither the English or their guide well knew on which side the entrance lay: nor was it easy to have made another; wherefore the good providence of Almighty God is the more to be acknowledged, who as he led Israel sometimes by the pillar of fire, and the cloud of his presence, a right way through the wilderness, so did he now direct our forces upon that side of the fort, where they might only enter through, not without the utmost danger and hazard. The fort was

raised upon a kind of island of five or six acres of rising land in the midst of a swamp; the sides of it were made of pallisadoes, set upright, which was compassed about with an hedge of almost a rod thickness, through which there was no passing, unless they could have fired a way through, which then they had no time to do. The place where the Indians used ordinarily to enter themselves, was upon a long tree over a place of water, where but one man could enter at a time, and which was so waylaid that they would have been cut off that had ventured there: but at one corner there was a gap made up only with a long tree, about four or five feet from the ground, over which men might easily pass: but they had placed a kind of block-house right over against the said tree, from whence they sorely galled our men that first entered, some being shot dead upon the tree, as was Capt. Johnson; and some as soon as they entered, as was Capt. Davenport; so as they that first entered were forced presently to retire, and fall upon their bellies, the fury of the enemy's shot was pretty well spent, which some companies that did not discern the danger, not observing, lost sundry of their men, but at the last two companies being brought up, besides the four that first marched up, they animated one another, to make another assault, one of the commanders crying out, they run, they run, which did so encourage the soldiers that they presently entered amain. After a considerable number were well entered, they presently beat the enemy out of a flanker on the left hand, which did a little shelter our men from the enemy's shot, till more came up, and so by degrees made up higher, first into the middle, and then into the upper end of the fort, till at last they made the enemy all retire from their sconses, and fortified places, leaving multitudes of their dead bodies upon the place. Connecticut soldiers marching up in the rear, being not aware of the dangerous passage over the tree, in command of the enemy's block-house, were at their first entrance many of them shot down, although they came on with as gallant resolution as any of the rest, under the conduct of their wise and valiant leader, Major Treat.

The brunt of the battle, or danger that day, lay most upon the commanders whose part it was to lead on their several companies in the very face of death, or else all had been lost; all of them with great valour and resolution of mind, not at all afraid to die in so good a cause, bravely led on their men in that desperate assault; leaving their lives in the place as the best testimony of their valour, and of love to the cause of God and their country. No less than six brave captains fell that day in the assault, viz. Capt. Davenport, Capt. Gardiner, Capt. Johnson, of Massachusetts, besides Lieutenant Upham, who died some months after of his wounds received at that time. Capt. Gallop also, and Capt. Sieley, and Capt. Marshall were slain, of those belonging to Connecticut colony. It is usually seen that the valour of the soldiers is much wrapped up in the lives of their commanders, yet it was found here, that the soldiers were rather enraged than discouraged by the loss of their commanders, which made them redouble their courage, and not give back after they were entered a second time, till they had driven out their enemies: so after much blood and many wounds dealt on both sides, the English seeing their advantage, began to fire the wigwams where was supposed to be many of the enemy's women and children destroyed, by the firing of at least five or six hundred of their smoky cells.

It is reported by them that first entered the Indians' fort, that our soldiers came upon them when they were ready to dress their dinner, but our sudden and unexpected assault put them beside that work, making their cook rooms too hot for them at that time, when they and their mitchin fried together: and probably some of them eat their suppers in a colder place that night: most of their provisions as well as their huts being then consumed with fire, and those that were left alive forced to hide themselves in a cedar swamp, not far off, where they had nothing to defend themselves from the cold but boughs of spruce and pine trees: for after two or three hours fight, the English became masters of the place, but not judging it tenable, after they had burned all they could set fire upon, they were forced to retreat, after the daylight was almost quite spent, and were necessitated to retire to their quarters, full fifteen or sixteen miles off, some say more, whither with their dead and wounded men they were forced to march, a difficulty scarce to be believed and not paralleled in any former age.

It is hard to say who acquitted themselves best in that day's service, either the soldiers, for their manlike valour in fighting, or the commanders for their wisdom and courage, leading on in the very face of death.—There might one have seen the whole body of that little regimental army, as busy as bees in a hive, some bravely fighting with the enemy, others hauling off and carrying away the dead and wounded men (which I rather note) that none may want the due testimony of their valour and faithfulness, though all ought to say, not unto us, but unto thy name, O Lord, &c.

For though there might not be above three our four hundred at any time within the fort at once, yet the rest in their turns came up to do what the exigence of the service required in bringing off the dead and wounded men: the Massachusetts regiment, together with Capt. Mosely, was very serviceable, for by that means the fort being clear of the dead bodies, it struck a greater terror into the enemy, to see but eight or ten dead bodies of the English left, than to meet with so many hundreds of their own slain and wounded carcasses. The number of the slain was not then known on the enemy's side, because our men were forced to leave them on the ground: but our victory was found afterwards to be much more considerable than at first was apprehended; for although our loss was very great not only because of the desperateness of the attempt itself (in such a season of the year, and at such a distance from our quarters, whereby many of our wounded men perished, which might otherwise have been preserved, if they had not been forced to march so many miles in a cold snowy night, before they could be dressed) yet the enemy lost so many of their principal fighting men, their provision also was by the burning of their wigwams, so much of it spoiled at the taking of their fort, and by surprising so much of their corn about that time also; that it was the occasion of their total ruin afterwards: they being at that time driven away from their habitations, and put by from planting for the next year, as well as deprived of what they had in store for the present winter. What numbers of the enemy were slain is uncertain, it was confessed by one Potock, a great counsellor amongst them, afterwards taken at Rhode Island, and put to death at Boston, that the Indians lost 700 fighting men that day, besides three hundred that died of their wounds. The number of old men, women and children, that perished either by fire, or that were starved with hunger and cold, none of them could tell. There was above 80 of the English slain, and 150 wounded, that recovered afterwards.

There were several circumstances in this victory very remarkable.

First, The meeting with one Peter a fugitive Indian, that upon some discontent, flying from the Narragansets, offered himself to the service of the English, and did faithfully perform what he promised, viz. to lead them to the swamp where the Indians had seated themselves within a fort raised upon an Island of firm earth, in the midst of a swamp, whither none of the English could have piloted them without his assistance, the place being very near eighteen miles from the place where they were quartered.

Secondly, Their being by a special providence directed just to a place where they found so easy an entrance, which if they had missed, they could never have made a way through the hedge, with which they had surrounded the palisadoes of the fort, in half a day's time.

And Thirdly, If they had entered the way left by the Indians for a passage, they might have been cut off, before they could have come near their fortification.

Lastly, In directing their motion to begin the assault just at the day they did, for if they had deferred but a day longer, there fell such a storm of snow the next day that they could not have passed through it in divers weeks after; and on a sudden, there fell such a thaw, that melted away both ice and snow, so that if they had deferred till that time, they could have found no passage into their fortified place.

All which considerations put together, make it a signal favour of God to carry them through so many difficulties to accomplish their desired end. For after they had retired to their quarters, but sixteen miles from that place, there was so great a want of provision, the vessels being frozen in at the harbour about cape Cod, that should have brought them relief, and the frost and snow set in so violently, that it was not possible for them, with all the force they could make (so many of their ablest soldiers being slain and wounded) to have made another onset: But the goodness of the Almighty God was most of all to be admired, that notwithstanding all the hardships they endured that winter, in very cold lodgings, hard marches, scarcity of provision, yet not not one man was known to die by any disease or bodily distemper, save them that perished of their wounds.

Our forces being compelled by the aforesaid occasions, to lie still some weeks after hoping also that the enemy so sorely broken, would gladly have sued for peace: but as was said of old, God hardened their hearts to their own ruin and destruction afterwards: for as soon as our soldiers were able to march, find-

ing that all the enemy's overtures of peace, and prolonging of treaties, was only to gain time. that they might get away into the woods; they pursued after them, and sometimes came upon their rear, but then they would immediately fly an hundred ways at once into swamps, so as our men could not follow them, or if they did, could not see two of them together; so that now there was little good like to be done, unless they could take them at some advantage. At length having spent all their provision, and tired themselves in pursuing of them sixty or seventy miles, up through the woods towards Marlborough and Lancaster, towns that lie on the road to Connecticut, having killed and taken near 70 of them, our soldiers were ordered to return towards Boston, to recruit themselves supposing that the Narragansets, and those with them, were so enfeebled that they would have no mind suddenly to assault any of the English towns.

If any desire a more particular account of the loss which we sustained at the taking of the Narraganset fort, December 19th, 1675, they may take it as here follows:

Besides the six captains mentioned before, that either were slain in the assault, or died afterwards of their wounds, to whom may be reckoned Lieut. Upham, that died lately at Boston of the wounds he then received,

There were out of the company belonging to

	killed.	*wounded.*
Major Appleton,	3	22
Capt. Mosely,	9	10
Capt. Oliver,	5	10
Capt. Gardiner,	7	11
Capt. Johnson,	3	11
Capt. Davenport,	4	15
in all,	31	in all, 79

There were slain and wounded of

New Haven company,	20
Capt. Seiley's company,	20
Capt. Watts's company,	17
Capt. Marshall's company,	14
Plymouth company under Major Bradford and Capt. Gorham,	20
in all,	91

If there had not been so great a distance between the place of the fight and their quarters, and so much cold attending them in their retirement thereunto, some better account might have been given of that expedition, than now they were able to do. For a march of sixteen or eighteen miles is too much to breathe a fresh soldier, unless he were well mounted; but enough to kill the heart of them that have been wearied with a long and tedious fight. As for the coldness of the weather although it be a good besom to sweep the chamber of the air (which might be the reason there was no more diseases amongst them) yet it is an unwelcome companion to wearied, and especially to wounded men, in so long a retreat.

But the want of provision failing, in conjunction with the unseasonableness of the weather, and length of the way, our forces were hindered from any new attempt upon the enemy, which if they would have attended, it was thought it might have put an end to our troubles: but he that holdeth the scales of the victory in his hand turneth them to which side, and by what degrees pleaseth him best.

The rest of the winter was spent in fruitless treaties about a peace: both sides being well wearied with the late desperate fight, were willing to refresh themselves the remaining part of the winter, with the short slumber of a pretended peace, at least with a talk or dream thereof: our commanders aim therein was christian and if it had proceeded, i. e. to have prevented the shedding of more blood: and possibly some of the elder and wiser of the enemy, did really desire what was pretended by them all (for they had now full proof of the valour and resolution of the English, which some of them upon former successes might be ready to question) and they could not but see their destruction already begun, in the loss of our dwellings, and all their provisions, as well as the slaughter of the best part of their fighting men; but through consciousness of their barbarous treachery and falsehood, they could not trust others, and so were willing to run the utmost hazard, as people hardened to their own destruction. The particular passages of the treaty being carried on by the enemy only in pretence, (and by our men that soon discerned their fraud) rather out of necessity, to conceal their incapacity of engaging them anew, than any real expectation of a good effect, are not worthy the relating. However, though the foot were unable to do any service in the depth of the snow, and sharpness of the cold, the troop was sent out upon all occasions to scout about the country, who brought in daily much of the enemy's corn and beans, which they had hid in the ground under barns, or at least kept them from making use of their own provision, or spoiling the English cattle; now and then bringing in prisoners from their quarters, as they were straggling about to get victuals.

On the 27th of December, Capt. Prentice was sent into Bomham's country, where he burnt near an hundred wigwams, but found not an Indian in any of them.

On the 28th of December, a squaw was sent to them, who had been taken in the fight, with a proffer of peace, if they would submit to such terms as were propounded; the principal of which was, to deliver up all Philip's Indians, that were with them; the squaw returned, pretending that she was lame and unable to come again; but the 30th of December, an Indian came from the sachems, with with seeming thanks for the peace proffered, yet complained we made war upon them, and gave them no notice; but his mouth was soon stopped, by the answer they made him: he owned, as the squaw had said before, that they lost 300 of their best fighting men, and so did two prisoners of theirs, taken January 14th, whereof one being of Philip's company, was put to death. The messenger that was sent was fairly dismissed, with the express mention of what terms they must expect, if they desired a peace.

January 4th, there came two messengers from them, as they said to make way for a treaty of peace; who laid the blame upon Canonchet, who came to Boston in October last, to confirm the peace with the commissioners of the united colonies, as if he had misinformed them, viz. that they were not by by the former treaty to have delivered up the Wampanoogs, or Philip's Indians, until the aid Canonchet's brother, one of the hostages at Hartford, was released. This was but a mere pretence, for he and they too, better understood the particulars of the agreement: for by chance the articles which they had of the peace concluded with them, were found open (whether purposely or accidentally was not known) in a wigwam in the fort when it was taken, so they could not be ignorant of the articles of the agreement.

January 5th, an English child of about three or four years old, taken from Warwick, was sent in to put the better pretence upon the treaty mentioned.

January 8th, the messengers were sent back, and told what they must trust to. In the afternoon a messenger came from Ninigret, the old sachem of Narraganset, who brought a letter from Mr. Stanton, the interpreter, signifying the reality of the said Ninigret, in his friendship to the English, and the straits of the enemy, that corn was two shillings a pint with them. Yet notwithstanding all their difficulties, they rather delayed the time till they could get away, than really endeavour to make a peace, as was soon manifest: for that young and insolent sachem, Canonchet, and Panoquin, said they would fight it out to the last man, rather than become servants to the English.

January 10th, a fresh supply of soldiers came up from Boston, wading through a sharp storm of snow, that bit some of them by the heels with the frost. The next day one that came with them, going out with the scouts, fell amongst the Indians' barns, in one of which, as he was groping to find corn for the relief of his horse, he catched hold of an Indian's hair, under the leaves, who presently held up his hands, (when the soldier was drawing his sword,) to spare his life, which was granted, but after he was brought to the head-quarters, he would own nothing but what was forced out of his mouth, by the woolding of his head with a cord, wherefore he was presently judged to die as a Wampanoog.

January 12th, another messenger came from Cononicus, desiring the space of a month longer, wherein to issue the treaty, which so provoked the commander of our forces, that they resolved to have no more treaties with the enemy, but prepare to assault them, with God's assistance, as soon as ever the season would permit, and it was high time to take up for within a few days after they understood by some that were taken prisoners, that the enemy were gone, or going into the Nipmuch country.

Within a few days after, about the 16th of January, the scouts brought in one Joshua Tift, a renegado Englishman, of Providence, that upon some discontent among his neighbours, had turned Indian, married one of the Indian squaws, renounced his religion, nation, and natural parents, all at once fighting against them. He was taken by Capt. Fenner, of Providence, who with some of his neighbours were pursuing some Indians that had driven away their cattle. This Tift being one of the company was wounded in the knee, and so was siezed by the English; he had in his habit conformed himself to them amongst whom he lived. After examination he was condemned to die the death of a traitor. As to his religion he was found as ignorant as an heathen, which no doubt caused the fewer tears to be

shed at his funeral, by being unwilling to lavish pity upon him that had divested himself of nature itself, as well as religion, in a time when so much pity was needed elsewhere, and nothing left besides wherewith to relieve the sufferers.

January 21st, Capt. Prentice's troops being abroad, met with a party of the enemy, of whom they took two prisoners, and killed nine; in which exploit, something happened very remarkable, for one W. Dodge, of Salem, riding in company with another friend, they happened to meet with two Indians, the said Dodge being better horsed than his friend, made after the foremost, leaving his friend to deal with the hindmost, but his pistol missed firing, whereupon the Indian taking him by the leg, turned him off his horse, and getting upon him, was about killing him with his knife, which Mr. Dodge by chance espied, and came time enough to rescue his friend, and dispatch the Indian lying upon him, and yet overtook the first Indian he was pursuing, time enough to do his business also: by that means he did three good offices at once, saved the life of one friend, and slew two of his enemies. But within two or three days after, the weather much altering from what it was, induced our forces to take the first opportunity to pursue the enemy, who, as they understood by messengers from Providence, were now upon their flight into the Nipmuc country: But so many difficulties were cast in their way, that they could not be ready time enough to prevent the mischief they did at Warwick, as they took their farewell of their country: For,

January 27th, they despoiled Mr. Carpenter of two hundred sheep, and fifty head of neat cattle, and fifteen horses; all which they drove along with them, and were gone too far to be rescued before our forces set out. Two that belonged to the said Carpenter were wounded and one of the enemy slain. As they marched after the enemy, they found a good house burned, with a barn belonging to it. They perceived also that the enemy dealt much in horse flesh, meeting with no less than sixty horses heads in one place, which they had left behind them. Our soldiers in their pursuit came upon the rear, killed and took about seventy of them, yet never could come to charge them, for they would presently betake themselves into swamps, and not two of them running together, they saw it was an endless work to proceed further in the chace of such an enemy; but our forces having pursued them into the woods, between Marlborough and Brookfield, in the road toward Connecticut, were constrained to turn down to Boston, in the beginning of February, for want of provision, both for themselves and their horses, which gave an occasion to the loss of those lesser towns that were destroyed by the Nipnet Indians, who presently joined with the Narragansetts, upon their first approach, as shall be related afterwards.

About the 10th of February after, some hundreds of the Indians, whether Nipnets or Nashaway men is uncertain, belonging to him they call Sagamore Sam, and possibly some of the stoutest of the Narragansets that had escaped the winter brunt, fell upon Lancaster, a small village of about fifty or sixty families, and did much mischief, burning most of the houses that were not garrisoned: and which is most sad and awful to consider, the house of Mr. Rowlandson, minister of said Lancaster, which was garrisoned with a competent number of the inhabitants; yet the fortification of the house being on the back side, closed up with fire wood, the Indians got so near as to fire a leanter, which burning the house immediately to the ground, all the persons therein were put to the hard choice, either to perish by the flames, or to yield themselves into the hands of those cruel savages, which last (considering that a living dog is better than a dead lion) they chose, and so were 42 persons surprised by the Indians, above twenty of the women and children they carried away captive, a rueful spectacle to behold; the rest being men, they killed in the place or reserved for further misery: and many that were not slain in fighting, were killed in attempting to escape. The minister himself was occassionally absent, to seek help from the governor and council to defend that place, who returning, was entertained with the tragical news of his wife and children surprised, and being carried away by the enemy, and his house turned to ashes, yet it pleased God so to uphold his heart, comforting himself in his God as David at Ziklag, that he would always say, he believed he should see his wife and children again, which did in like manner soon come to pass within five or six months after; all all save the youngest, which being wounded at the first died soon after, among the Indians.

And such was the goodness of God to those poor captive women and children, that they found so much favour in the sight of their enemies, that they offered no wrong to any of their persons save what they could not help, being in many wants themselves. Neither did they offer any uncivil carriage to any of the females, nor ever attempted the chastity of any of them, either being restrained of God as was Abimeleck of old, or by some other accidental cause which withheld them from doing any wrong in that kind.

Upon the report of this disaster, Capt. Wadsworth, then at Marlborough, with about forty resolute men, adventured the rescuing of the town that was remaining: And having recovered a bridge, they got over safe, though the planks were pulled off by the enemy, and being led up in a way, not discovered by them, they forced the Indians for the present to quit the place, after they had burnt and destroyed the better half of it. Yet afterwards it not being judged tenable, it was abandoned to the pleasure of the insulting foe.

Ten days after they were so flushed with this success, that two or three hundred of them came wheeling down to Medfield, a town twenty miles from Boston, westward from Dedham, which they surprised very early in the morning (and though there were one hundred and sixty soldiers in it, or more, besides the inhabitants) they burnt near one half of the town, killing about twenty persons, but by the resistance of the soldiers, as soon as they could be rallied together (it being at or before break of day, none in the least suspecting such an assault so early) they were quickly forced to forsake the place, and so (not without some loss) took their way to Plymouth colony.

The western towns above Connecticut were the chief seat of the war, and felt most of the mischief thereof, in the end of the year 1675; but the scene is now to be changed; and the other towns and villages that lie eastward, nearer Boston, must bear their part in the like tragedies: For as was said before, the Narragansets having been driven out of the country, fled through the Nipnet plantations, towards Watchuset hills, meeting with all the Indians that had harboured all winter in those woods about Nashaway, they all combined against the English, yet divided their numbers, and one of them were observed to bend their course towards Plymouth, taking Medfield in their way, which they endeavoured to burn and spoil, February 21, 1675, as their fellows had done Lancaster ten days before.

The surprisal of this Medfield, in regard of some remarkable circumstances it was attended with, is not unworthy a more particular relating as to the manner thereof: The loss of Lancaster had sufficiently awakened and alarmed the neighbouring villages, all to stand upon guard; and some had obtained garrisoned soldiers for their greater security, as was the case with them in the town of Medfield, within twenty-two miles of Boston. And at that time were lodged therein several garrison soldiers, besides the inhabitants; yet being billetted up and down in all quarters of the town, could not be gathered together till a great part of the town was set on fire and many of the inhabitants slain, which, how it could be effected is strange to believe: But most of those inland plantations being overrun with young wood (the inhabitants being very apt to engross more lands into their hands than they were able to subdue) as if they were seated in the midst of a heap of bushes: Their enemies took the advantage thereof, and secretly over night, conveyed themselves round about the town, some getting under the sides of their barns, and fences of their orchards, as is supposed, where they lay hid under that covert, till break of day, when they suddenly set upon sundry houses, shooting them that came first out of their doors, and then fired their houses: Some were killed as they attempted to fly to their neighbours for shelter. Some were only wounded, and some taken alive and carried off captives: In some houses the husband running away with one child, the wife with another, of whom the one was killed, the other escaped. They began at the east end of the town, where they fired the house of one Samuel Morse, that seems to have been a signal to the rest to fall in on other parts: Most of the houses in the west, or southwest end of the town were soon burnt down: And generally when they burnt any out houses, the cattle in them were burnt also. Two mills belonging to the town were burnt also: A poor old man of near an hundred years old, was burnt in one of the houses that were consumed by fire. The lieutenant of the town, Adams by name, was shot down by his door and his wife mortally wounded by a gun fired afterwards accidentally into the house. After the burning of forty or fifty houses and barns, the cannibals were frighted away out of the town, over a bridge that lies upon Charles river, by the shooting of a piece of ordnance two or three times: When they passed over the bridge they fired one end thereof, to hinder our men from pursuing them; there were thought to be above five hundred; there were slain and mortally wounded seventeen or eighteen persons, be-

sides others dangerously hurt. The loss sustained by the inhabitants amounted to above two thousand pounds. This mercy was observed in this sad providence, that never a garrison house was lost in this surprisal; nor any of the principal dwellings, so as the chiefest and best of their buildings escaped the fury of the enemy, who as they passed the bridge, left a writing behind them, expressing something to this purpose, that we had provoked them to wrath, and that they would fight with us these twenty years, (but they fell short of their expectation by nineteen) adding also, that they had nothing to lose, whereas we had houses, barns, and corn: These were some of the bold threats used by the barbarous crew, but their rage shall proceed no further than the counsel of God hath determined. The week before was heard a very hideous cry of a kennel of wolves round the town, which raised some of the inhabitants, and was looked upon by divers persons, as an ominous presaging of the following calamity. Another assault was feared, but as soon as the soldiers could be gathered together, they turned their backs, as if they never intended to visit them more: whither these Indians went when they left Medfield, is not certainly known; the soldiers in the town not having opportunity to pursue them over the river, by reason that the bridge was part of it burned: But it is most probable that they took their way toward Plymouth, and continued about that side of the country for the future, waiting opportunities to do what mischief they could to the English in those parts; for within a month after the assault at Medfield, there were six hundred of them seen about Patuxet and Providence, were Capt. Pierce, with about fifty of his men were lost, though with no great advantage to the enemy, who at that time lost above double that number: Our worthy captains in this and other exploits, being called to imitate Sampson, who was content to die with his enemies, that he might overthrow them thereby: It having so fallen out with many of our choice commanders and soldiers at Deerfield, Narraganset, Patuxet, and likewise not long after at Sudbury.

The governor and council of Plymouth perceiving by the report of these outrages committed upon the towns in Massachusetts, that they were like to be visited this spring by their old neighbours, sent out Capt. Pierce, of Situate, about the latter end of March with about fifty English and twenty christian Indians, about Cape Cod, who proved none of his worst soldiers, as the sequel of this his last expedition will declare.

Capt. Pierce, as is said before, being sent out to pursue the enemy, marched towards Patuxet, where he understood the Indians were many of them gathered together: He being a man of resolute courage, was willing to engage them, though upon never so great a disadvantage. Some say the Indians by counterfeiting, drilled him into a kind of ambush; possibly more of them discovered themselves after he began to engage them than he was aware of; and being got over the river in pursuit of them, where he discovered so great a number of them, he drew down towards the side of the river, hoping the better by that means to prevent their surrounding him; but that proved his overthrow which he intended as his greatest advantage: For the Indians getting over the river so galled him from thence, that he was not able to defend himself; thus assaulted on all sides, and himself not being able to travel much on foot, was thereby hindred from retiring to any better place in time, so that he saw himself constrained to fight it out to the last, which he did with most undaunted courage; and, as is said, to the slaughter of an hundred and forty of his enemies, before himself and his company were cut off. It is said also, that being apprehensive of the danger he was in from the great numbers of the enemy, he sent a messenger timely enough to Providence, for relief, but as Solomon saith, a faithful messenger is as snow in harvest, another is as smoke to the eyes, and vinegar to the teeth. (Whether through sloth or cowardice, is not material,) this message was not delivered to them to whom it was immediately sent; by accident only some of Rehoboth understanding the danger, after the evening exercise (it being on the Lord's day, March 27th, 1676) repaired to the place, but then it was too late to bring help, unless it were to be spectators of the dead carcasses of their friends, and to perform the last office of love to them.

It is worth the noting, what faithfulness and courage some of the christian Indians, with the said Captain Pierce, shewed in the fight. One of them, whose name was Amos, after the captain was shot in his leg or thigh, so as he was not able to stand any longer, would not leave him, but charging his gun several times, fired stoutly upon the enemy, till he saw that there was no possibility for him to do any further good to Capt. Pierce, nor yet to save himself, if he stayed any longer; therefore he used this policy, perceiving that the enemy had all blackened their faces, he also stooping down pulled out some blacking out of a pouch he carried with him, discolored his face therewith, and so making himself look as much like Hobamackco, as any of his enemies, he ran amongst them a little while, and was taken for one of them, as if he had been searching for the English, until he had an opportunity to escape away among the bushes; therein imitating the cuttle fish, which, when, it is pursued, or in danger, casteth out of its body a thick humour, as black as ink, through which it passes away unseen by the pursuer.

It is reported of another of these cape Indians, (friends to the English of Plymouth) that being pursued by one of the enemy, he betook himself to a great rock where he sheltered himself for a while; at last perceiving that his enemy lay ready with his gun on the other side to discharge upon him, as soon as he stirred away from the place where he stood: In the issue he thought of this politic stratagem to save himself, and destroy his enemy, (for as Solomon said of old, wisdom is better than weapons of war) he took a stick, and hung his hat upon it, and then by degrees gently lifted it up, till he thought it would be seen, and so become a fit mark for the other that watched to take aim at. The other taking it to be his head, fired a gun and shot through the hat; which our christian Indian perceiving, boldly held up his head and discharged his own gun upon the real head, not the hat of his adversary, whereby he shot him dead upon the place, and so had liberty to march away with the spoils of his enemy.

The like subtle device was used by another of the cape Indians at the said time, being one of them that went out with Capt. Pierce; for being in like manner pursued by one of Philip's Indians as the former was, he nimbly got behind the but end of a tree newly turned up by the roots, which carried a considerable breadth of the surface of the earth along with it (as is very usual in those parts where the roots of the trees lie deep in the ground) which stood above the Indian's height, in form of a large shield, only it was somewhat too heavy too be easily removed; the enemy Indian lay with his gun ready to shoot him down upon his first deserting his station; but the subtle wit taught our christian Netop a better device for boring a little hole through this his broad shield, he discerned his enemy who could not easily discern him; a good musketer need never desire a fairer mark to shoot at, whereupon discharging his gun, he shot him down. What can be more just than that he should be killed, who lay in wait to kill another man? *neque enim lex justior alla est, quam necis artifices arse perire sua.*

Instances of this nature show the subtlety and dexterousness of these natives, if they were improved in feats of arms; and possibly if some of the English had not been too shy in making use of such of them as were well affected to their interest, they need never have suffered so much from their enemies; it having been found upon late experience, that many of them have proved not only faithful, but very serviceable and helpful to the English; they usually proving good seconds though they have not ordinarily confidence enough to make the first onset. But to return to the proceedings of the Indians towards Plymouth.

February 25th, they assaulted Weymouth, and burnt seven or eight houses and barns there, which Weymouth is a town lying towards Plymouth colony.

March 12th following, they assaulted the house of one Mr. Clarke, in Plymouth, cruelly murdering eleven persons that belonged to two families that lodged therein, and then fired the house. The cruelty towards these persons was the more remarkable, in that they had often received much kindness from the said Clarke. It is the custom of such debtors, to use them worst, of whom they have taken up much kindness upon trust beforehand.

March 17th, another party of them fell upon Warwick, a place beyond Philip's land, toward the Narraganset country, where they burnt down to the ground all but a few houses, which they left standing as a monument of their barbarous fury. The like mischief was acted by them upon the houses of the English remaining in the Narraganset country.

This 26th day of March, being the first day of the week, as the first of the year after our Julian account, seemed ominous at the first, on sundry accounts, threatening a gloomy time, yet proved in the issue, but as a lowering morning before a lightsome day.

For besides the burning of Marlborough, at least a great part of it, on the same day, a very sad accident fell out the same time at Springfield shall be specified hereafter; besides that which befel Capt. Pierce, which is already related, with whom fell so many of his soldiers on the same day also; yet had the enemy no cause

to boast, being forced by the valour of the English, to give so many of their own lives in exchange; Some few made their escape, as is said, by subtle devices; besides the three forementioned, another by a like shift, not only saved himself, but helped an Englishman to escape also, whom he ran after with his hatchet in his hand, as if he were about to kill him whereby both of them made a shift to get away; the rest were all lost (the unfaithfulness of the messenger being as was intimated before, the cause of their slaughter) save a few that hardly escaped by the advantage of the bushes giving them opportunity to pass unseen, yet it was confessed by a prisoner of the enemy, taken afterwards by the English, that they lost an hundred and forty in that encounter: and had not the said English by wading after the enemy over a river made their ammunition useless, there had not half so many of them been cut off. From thence they turned back towards Rehoboth, near Swanzey, when on March 28th, they burnt thirty barns and near forty dwelling houses, thereby as it were threatening the utter desolation of that poor town; and so proceeding on that side the country, they burnt the very next day about thirty houses in Providence, in their way toward Narraganset.

But it was now full sea with Philip's affairs, for soon after the tide of his successes began to turn about the sea coast, which made way for the falling of the water up higher in the country.

For about this time news came to Boston that our neighbours and friends of Connecticut colony, hearing of the attempts of the enemy on that side of the country, sent a party of their soldiers, under the command of Capt. George Denison, with some friendly Indians, part Mohegins and Pequods, part Niantics, belonging to Ninigret, a Narraganset sachem, who never engaged in this quarrel against the English; who in pursuit of the enemy, meeting with a considerable part of them about the Narraganset country, killed and took forty-five of them, without the loss of their own men. This victory was the more considerable, in that several of the chief captains of the enemy were at this time killed or taken; amongst whom was Canonchet (who came down to get seed corn to plant at Squakheag;) he was the chief sachem of all the Narragansets, the son of Miantonimo, and the heir of all his father's pride and insolence, as well as of his malice against the English, a most perfidious villain, who had the last October been at Boston, pretending to make a firm peace with the English, but never intending to keep one article thereof: Therefore, as a just reward of his wickedness he was adjudged by those that took him to die, which was accordingly put in execution at Sonington, whither he was carried; there his head being cut off, was carried to Hartford; the Mohegins and Pequods that had the honour to take him prisoner having the honour likewise of doing justice upon him, and that by the prudent advice of the English commanders, thereby the more firmly to engage the said Indians against the treacherous Narragansets. There are differing reports about the manner of his being taken, and by whom, whether the Indians or the English first took him; however, it was sufficient matter of rejoicing to all the colonies, of the English, that the ringleader of almost all this mischief, and great incendiary betwixt the Narragansets and us, died himself by that sword of war which he had drawn against others.

Concerning the Narragansets, this is further to be added here, that Mr. Thomas Staunton and his son Robert, who have a long time lived amongst them, and best acquainted with their language and manners of any in New England do affirm, that to their knowledge, the Narraganset sachems, before the late troubles, had two thousand fighting men under them, and nine hundred arms, yet they are at this day so broken and scattered, that there is none of them left on that side of the country, unless some few, not exceeding seventy in number, that have sheltered themselves under the inhabitants of Rhode Island, as a merchant of that place, worthy of credit, lately affirmed to the writer hereof. It is considered by what degrees they have been consumed and destroyed.

The first week in April, 1676, Canonchet, their chief sachem, having with this people been driven out of his own country, by the sword of the English, the winter before, breathed still nothing but rage and cruelty against them: yet as appeared in the issue, himself and they that escaped with him were not much preserved from the present calamity that befel those in the fort, being reserved to another and more ignominious death. For the whole body of the Indians to the westward, trusting under the shadow of that aspiring bramble, he took a kind of care of them upon himself: Wherefore foreseeing so many hundreds could not well subsist without planting, he propounded it in his council, that all the west plantations upon Connecticut river, taken from the English, should this last summer be planted with Indian corn; which was indeed in itself a very prudent consideration: to that end he resolved to venture himself with but thirty men (the rest declining it) to fetch seed corn from Seaconk, the next town to Mount Hope, leaving a body of men, not less than fifteen hundred to follow him or meet him about Seaconk the week after. The adventure brought him into a snare, from whence he could not escape: for Capt. George Denison, of Stonington, and Capt. Avery of New London, having raised forty seven English, the most part volunteers, with eighty Indians, twenty of which were Narragansetts belonging to Ninigret, commanded by one called Catapazet, the rest Pequods, under Cassasinamon and Mohegins, under Oneco, son of Uncas, being now abroad on their third expedition, which they began March 27th, 1676, and ended on the 10th of April following: they met with a stout Indian of the enemy's whom they presently slew, and two old squaws, who confessed Nanunttenoo, alias Canonchet (these chief sachems usually changing their names at every great dance, and by the name of Nanunttenoo was he then known) was not far off, which welcome news put new life into the wearied soldiers, that had travelled hard many days, and met with no booty till now; especially when it was confirmed by intelligence the same instant, brought in by their scouts, that they met with new tracks, which brought them in view of what is called Blackstone's river, the said sachem was at that moment diverting himself with the recital of Capt. Pierce's slaughter, surprised by his men a few days before, but the alarm of the English at that time heard by himself, put by that discourse, appalled by the suddenness thereof, as if he had been informed by secret item from Heaven, that now his own turn was come; for having but 7 men about him, he sent up two of them to the top of the hill, to see what the matter was, but they affrighted with the near approach of the English, at that time with great speed mounting over a fair champagna on the other side of the hill, ran by, as if they wanted time to tell what they saw; presently he sent a third, who did the like; then sending two more on the same errand, one of these last, endowed with more courage, or a better sense of his duty, informed him in great haste that all the English army was upon him; whereupon having no time to consult, and but little to attempt an escape, and no means to defend himself; he began to dodge with his pursuers; running round the hill on the contrary side; but as he was running so hastily by, Catapazet, with twenty of his followers, and a few of the English, lightest of foot, guessed by the swiftness of his motion, that he fled as if an enemy, which made them immediately take the chace after him, as for their lives; he that was the swifter pursuer put him so hard to it that he cast off first his blanket then his silver laced coat (given him at Boston, as a pledge of their friendship, upon the renewal of his league in October before) and belt of peag, which made them pursue as eagerly as the other fled; so that they forced him to take to the water, through which as he over hastily plunged, his foot slipping upon a stone, it made him fall into the water so deep that it wet his gun, upon which accident he confessed soon after, that his heart turned within him, so as he became as a rotten stick; void of strength, insomuch as one Monopoide, a Pequod, swiftest of foot, laid hold of him within thirty rods of the river side, without his making any resistance; though he was a very proper man, of goodly stature, and great courage of mind, as well as strength of body; one of the first English that came up with him was Robert Stanton, a young man that scarce had reached the 22d year of his age, yet adventuring to ask him a question or two, to whom this manly sachem, looking with a little neglect upon his youthful face, replied in broken English, you much child, no understand matters of war: let your brother or your chief come, him I will answer; and was as good as his word; acting herein, as if by a Pithagorean metempsychosis, some old Roman ghost had possessed the body of this western Pagan; and like Attilius Regulus he would not accept of his own life, when it was tendered him, upon that (in his account) low condition of compliance with the English, refusing to send an old counsellor of his to make any motion that way, saying he knew the Indians would not yield; but more probably he was not willing they should, choosing rather to sacrifice his own, and his people's lives, to his private humour of revenge, than timely to provide for his own, and their safety, by entertaining the counsels of a peace, so necessary for the general good of all: he continuing in the same obstinate resolution, was soon after carried to Stonington, where he was shot to death by some of his quality, *sc.* the young sachem of the Mohegins, and two of the Pequods of like quality. This was the

confusion of a damned wretch, that had often opened his mouth to blaspheme the name of the living God, and those that make profession thereof. He was told at large of his breach of faith, and how he boasted he would not deliver up a Wampanoog, or the paring of a Wampanoog's nail, that he would burn the English in their houses; to which he replied, others were as forward for the war as himself: and that he desired to hear no more thereof. And when he was told his sentence was to die, he said, he liked it well, that he should die before his heart was soft, or had spoken any thing unworthy of himself. He told the English before they put him to death, that the killing him would not end the war; but it was a considerable step thereunto, nor did it live much longer after his death, at least not in those parts; for after Sudbury fight, when the sun of their hopes was at its highest; April the 18th following, it visibly declined, till it set in a night of obscure and utter darkness upon them all, as is to be feared.

The inhabitants of New London, Norwich and Stonington, apprehensive of their danger, by reason of the near bordering of the enemy, and upon other prudent consideration, voluntarily listed themselves under some able gentlemen, and resolute soldiers, amongst themselves, Major Palmes, Capt. George Denison, Capt. Avery, with whom, or under whom, within the compass of the year 1676, they made ten or more several expeditions, in all which, at those several times, they killed and took two hundred and thirty-nine of the enemy, by the help and assistance of the Pequods, Mohegins, and a few friendly Narragansets; besides thirty taken in their long march homeward, after the fort fight, December 19th, 1675; and besides 16 captivated in the second expedition, not reckoned within the compass of the said number; together with fifty guns, and spoiling the enemy of an hundred bushels of corn.

In January they went again in pursuit, and took five men and a boy. Certain Nipnets intended to have sheltered themselves under Uncas; but he perceiving it would be distasteful to the English, soon shabbed them off, so as they were in the beginning of the winter brought into Boston, many of them by Peter Ephraim, and Andrew Pityme, with their fellows.

In all which exploits, neither they nor any of their followers sustained any loss by the sword of the enemy, or sickness; as is expressly declared by the reverend minister of Stonington, Mr. James Noyce, which is a matter very admirable to consider, engaging all that were any way concerned in such signal testimonies of divine favour, to be ready to pay their vows to the Most High, who alone teacheth the hands of his people to war, and their fingers to fight.

Not long after Capt. George Denison, of Stonington, with sixty-six volunteers, and a hundred and twelve Pequods, killed and took seventy-six of the enemy, amongst whom were two Narraganset sachems, one of whom was the grand-child of Pomham (who is accounted the most warlike, and the best soldier of all the Narraganset sachems) taking at the same time 160 bushels of the enemy's corn, no small damage to our enemies at that time, and all this without the loss of one man of the said captain's followers.

The greater mischief which after this time was done by the enemy in Plymouth colony, was by burning of houses and barns, which they might easily do, the inhabitants in most of those towns being repaired to garrison houses for their greater security: for about the 20th of April, fifty of the enemy burnt about nineteen houses and barns in Situate, but were so resolutely encountered by a few of the inhabitants, that they were driven away, and thereby prevented from doing further mischief.

Not long after, May 8th, they burnt about seventeen houses and barns in Bridgewater, a small town in Plymouth colony, twelve miles on this side Taunton; but it pleased God just at the time to send a thunder-shower, which put out the fire, or else it might have prevailed much further.

It is very remarkable, that the inhabitants of the said Bridgewater, never yet lost one person by the sword of the enemy, though the town is situate within Plymouth colony, yet they have helped to destroy many of the enemy. None knows either love or hatred by all that is before them in things of this nature; nor ought standers by that may escape, think themselves less sinners than those that perish by the sword of the enemy: yet about this time four of the inhabitants of Taunton were killed as they were at their work in the field, whereby it is said that thirty children were made fatherless: So unsearchable are the judgments of the Almighty and his ways past finding out.

During these calamities, God's dispensations have been various, as well in references unto towns and villages, as unto persons: as if some places have been by special providence marked out to preservation, as others unto destruction; of which no other reason can be rendered, than the good pleasure of God so to order and dispose of events, which sometimes, as Solomon says, are all one to the good, and to the clean and to the unclean.

And because special notice is taken of the town of Bridgewater, which although it is feared, as it were in the midst of danger, and hath often been assaulted by considerable numbers of the enemy, yet never lost any one of their inhabitants, young or old; a particular account shall here be given of the most remarkable passages of divine providence relating to that plantation since the war began. June 26th, 1675, when Philip's malice against the English, mixed with a particular prejudice against Governor Winslow, began to boil up to the height of an open rebellion; the people of Swanzey being likely to be distressed by the Indians, a post was instantly sent to the governor of Plymouth, the way lying through Bridgewater; the said post returned the next day, and about nine or ten o'clock, as he passed through the town, left an order from the governor for the raising of twenty men, well armed, and furnished with horses, to be forthwith dispatched away for the relief of Swanzey; seventeen were all that could be raised on the sudden, who were sent thither that night, and were the first that were upon their march in all the country; and possibly they fared not the worse for their forwardness: as Deborah, the prophetess, blessed God for them that offered themselves willingly among the people: these seventeen of Bridgewater, were, June 21st, ordered by Capt. Bradford of Metapoiset, a place at twelve miles distance from Swanzey, to strengthen the garrison at one Bourn's house, wherein were seventy persons, amongst whom were only found sixteen men. After they had marched five miles of their way, having Mr. Brown's son for their pilot, they met with some Swanzey people, newly turned out of their houses (by which they were to pass) who having not as yet resisted unto blood, yet made doleful lamentations, wringing of their hands, and bewailing their losses, very much also persuading the Bridgewater men to turn back, because of the danger, but they having so clear a call, had also more courage than cowardice to desert the cause of God and his people, lest they should thereby betray the lives of so many of their friends into the enemy's hands; and so by the good hand of God towards them, came safe to Metapoiset that night.

The next day in the morning, a part of them went to guard Mr. Brown, their pilot, back to his quarters; in their return they came suddenly upon a party of Indians, about thirty in all; they were within shot of one another, but the English having no commission to fight till they were assaulted, and not being impeded in their passage they returned safe to their garrison at Metapoiset: the Indians presently drawing off and firing three guns (though not with intent to do them any hurt, as was conceived) gave a shout, and so left them. When this party of the English drew near to their garrison, they met with a company of carts going to fetch corn from an house deserted near by, about a quarter of a mile from Mr. Bourn's house, the soldiers gave them notice of the Indians which they discovered, and withal advised them by no means to venture any more, because of the danger; they were resolved notwithstanding these earnest persuasions of the soldiers to have another turn, which they soon found to be at the peril of their own lives, six of them being presently after killed right out, or mortally wounded, as soon as they came to the barn where was the corn; these six are said to be the first that were slain in this quarrel. The soldiers at the garrison hearing the guns, made what haste they could to the place, but being most of them in that interim gone to look for their horses, they could not come time enough for the relief of their friends, yet upon their approach, they who had done the mischief presently fled away: one Jones, hard pursued by two Indians, was by their coming delivered from the extent of the enemy's cruelty, but having his mortal wound, had only the favour thereby, to die in the arms of his friends, though by wounds received from his enemies

The next week fifteen of those soldiers looking after their horses, fell into an ambush of twenty of the Indians, but being prepared for the encounter, they discharged their guns upon each other; but our men received no hurt, some of them felt the wind of the bullets passing by their faces; what damage the enemy received is uncertain, yet some of the English report they found some of their enemy's dead bodies in the place afterward.

Thus were they not only preserved in many perils themselves, but became instrumental also for the preservation of most of that garrison, who with their goods, by their means, with the help of a small party of Plymouth forces, sent thither after the six were killed

(as is mentioned before) were soon after transported safely to Read Island.

Many outrages were that summer committed upon their neighbours at Taunton and Namasket, yet it pleased God to protect the poor town of Bridgewater from any other hurt, till the beginning of April following, when themselves with their neighbours of Taunton and Rehoboth were strongly solicited to desert their dwellings, and repair down to the towns by the sea side, but God encouraged them to keep their stations, notwithstanding the extreme danger then presented. It is reported that Philip gave orders that Taunton and Bridgewater should not be destroyed till the last, which is all the favour to be expected from an enemy, but these things are only in the hands of God, and not to be determined by man.

April 9th, being Lord's day, a small party of the enemy came down upon the said Bridgewater, burnt an outhouse and barn, broke up and rifled several other houses in the same quarter of the town, which are notwithstanding yet remaining; they sent out a party of their men to pursue them that night and many days after, but could not hear of them.

May 7th, the Lord's day also (no doubt but the betterness of the day will increase the badness of their deed attempted thereon) they had intelligence of a great body of Indians dispersed that way, with intent to have fallen upon the town that very day, but were casually prevented by a great deal of rain that fell the night before; however, they were resolved not to miss the opportunity, wherefore on the next day (May 8th) about three hundred of them, one Tisguogen being their chief leader, at 8 or 9 in the morning made an assault upon the east end of the town, on the south side of the river: many of the inhabitants stayed at home that morning, because of the intelligence the day before, and so were the more ready to entertain them; some not taking that warning, ventured into the field about their occasions, were in danger of surprisal, but by the special favour of God escaped, and came time enough to help defend their own and their neighbours dwellings, being shot at, and hard pursued a considerable way.

The Indians presently began to fire the town, but it pleased God so to spirit and encourage several of the inhabitants, issuing out of their garrison houses, that they fell upon them with great resolution, and beat them off; at the same instant of time, the Lord of Hosts also fighting for them from Heaven, by sending a storm of thunder and rain, very seasonably which prevented the burning of the houses which were fired: The soldiers also fighting under the banners of God's special protection, were so successful in repelling the enemy, that none of the inhabitants were killed or taken, and but one wounded. The Indians by this stout resistance, being beaten off to the skirts of the town, made a fresh onset upon another quarter thereof, on the north side of the river, where they had done much more mischief but that God stirred up sundry of the people to venture out of their fortified houses, who fired upon the enemy, and beat them from their dwellings, so as in the evening they drew off to an outhouse, three miles distant from the town: The next day the inhabitants expected another assault, but the enemy having burnt the house and barn where they kept their rendezvous over night, and one house more not far distant, they marched all clear away for that time. Thus it pleased God so to order his dispensations toward this small town, as a brand plucked out of the fire, they did but just taste of this bitter cup, which others drank deeper of; yet had they not such mercy, as these had, mixed therewith: under God, the courage of the inhabitants was a great means of their preservation, for they fired so stoutly upon the enemy, that they durst not come very near some of the garrisoned houses, saluting them only at a distance. God was eminently seen upholding the spirit of all sorts, men and women, so as no consternation of mind was seen upon any of them, during the whole time of the dispute.

In this assault they lost but thirteen dwelling houses, whereof five only were in the town (the rest being outhouses, and deserted for the present) with some few barns, and some of their cattle; all which was a very inconsiderable loss, in comparison of what befel others, and themselves might endured, if God had not by his special favour prevented.

July 14th and 15th, another party of Indians came down upon the northwest side of the town, but with no better success; for they had no commission from the Lord of Hosts to touch any of the persons of the inhabitants, their power reaching only to the slaying of their cattle at this time.

July 18th, 19th, and 20th, they sent our parties after the enemy to pursue them by their track, who fell upon some of them. On the 20th they took sixteen, whereof two were men: On this day they had to assist them, it seems, some of the bay Indians, sent them from Capt. Brattle; some of the captives informed that there were but seventy or eighty in the company, and but ten or twelve men amongst them: But within a few days these Bridgewater men shall find better success in pursuit of their enemies, when Philip himself shall hardly escape their hands, as shall be seen afterwards.

While one party of the enemy thus acted their part about Plymouth colony and towards the sea coasts, other parties of them were not idle in the Massachusetts colony, where they assaulted many places, doing what mischief they could by firing of houses, and killing several persons in the inland plantations.

March 2d, they assaulted Groton; the next day over night Major Willard, with seventy horse came into the town; 40 foot also came up to their relief from Watertown, but the Indians were all fled, having first burnt all the houses in the town, save four that were garrisoned, the meeting house being the second they fired; soon after Capt. Still was sent with a small party of dragoons, of eight files, to fetch off the inhabitants of Groton, and what was left from the spoil of the enemy, having under his care about sixty carts, being in depth from front to rear about two miles, when a party of Indians lying in ambush, at a place of eminent advantage, fired upon the front and mortally wounded two of the first carriers, who both died the next night. Had God permitted, they would have done eminent damage to the whole body, it being full an hour before they could be drawn up, which was done with care and courage; but the Indians after a few more shot made, without doing harm, retired, and made no further assault upon them, being the same party of Indians which the day before had burnt some part of Chelmsford. Soon after this village was deserted and destroyed by the enemy; yet it was a special providence, that though the carts were guarded with so slender a convoy, yet there was not any considerable loss sustained.

The surprisal of Groton was after this manner: On March 2d, the Indians came in the night and rifled eight or nine houses, carried away some cattle, and alarmed the town.

On March 9th, about ten in the morning, a parcel of Indians having two days lurked in the town, and taken possession of three outhouses, and feasted themselves with corn, and divers swine and poultry, which they there seized, lay in ambush for two carts, which went from their garrison to fetch in some hay, attended with four men, two of which espying the enemy, made a difficult escape, the other two were set upon, and one of them slain, stript naked, his body mangled, and dragged into the highway, and laid on his back in a most shameful manner: the other taken captive and afterwards sentenced to death; but the enemy not concurring in the manner of it, execution was deferred, and he by the providence of God escaped by a bold attempt the night before he was designed to have been slaughtered, and fled to the garrison at Lancaster, the cattle in both towns wounded, and five of them slain.

March 13th was the day when the enemy came in a full body, by their own account four hundred, and thought by the inhabitants to be not many less. The town was at this time, (having been put into a fright by the sad catastrophe of Lancaster, the next bordering town) gathered into five garrisons, four of which were so near together, as to be able to command from one to the other, between which were the cattle belonging to those families, driven into pastures, which afterwards proved their preservation; the other was near a mile distant from the rest.

This morning the Indians (having in the night placed themselves in several parts of the town) made their onset; which began near the four garrisons, for a body of them having placed themselves in ambuscade, behind a hill, near one of the garrisons two of them made discovery of themselves, as if they had stood upon discovery. At this time, divers of the people, not suspecting that any such matter (for the day before, many had been upon discovery many miles, and found no signs of an enemy being so near) were attending their occasions, some foddering their cattle, some milking their cows, of whom the enemy might easily have made a seizure, but God prevented; they having another design in hand, as soon after appeared: These two Indians were at length espied, and the alarm given: whereupon the most of the men in the next garrison, and some also in the second (which was about eight or nine poles distant) drew out and went to surprize those two Indians, who kept their station till our men reached the brow of the hill, then arose in the ambush and discharged a volley upon them, which caused a disorderly retreat or rather a rout, in which one was slain, and three others wounded: Meanwhile another ambush had risen, and come upon the back

side of the garrison so deserted of men, and pulled down the pallisadoes: The soldiers in this rout, retreated not to their own, but passed by the next garrison, the women and children meanwhile exposed to hazard, but by the goodness of God made a safe escape to the other fortified house, without any harm, leaving their substance to the enemy, who made a prey of it, and spent the residue of the day in removing the corn and household stuff, (in which loss five families were impoverished) and firing upon the other garrison: Here also they took some cattle. No sooner was the signal given by the first volley of shot, but immediately in several parts of the town at once, did the smoke arise, they firing the houses.

In the afternoon they used a stratagem not unlike the other, to have surprised the single garrison, but God prevented. An old Indian passed along the street with a black sheep on his back with a slow pace, as one decrepid; they made several shot at him, at which several issued out to have taken him alive, but the watchman seasonably espying an ambush, behind the house, gave the signal, whereby they were prevented.

The night following, the enemy lodged in the town, some of them in the garrison they had surprised, but the body of them in an adjacent valley where they made themselves merry after their savage manner. The next morning they gave two or three vollies at Capt. Parker's garrison, and so marched off, fearing as was thought, that supply might be near at hand.

This assault of theirs was managed with their wanted subtlety and barbarous cruelty; for they stript the body of him whom they had slain in the first onset, and then cutting off his head, fixed it upon a pole, looking towards his own land. The corpse of the man slain the week before, they dug out of his grave, and cut off his head and one leg, and set them upon poles, and stript off his winding sheet. An infant which they found dead, in the house they first surprised, they cut in pieces, which afterward they cast to the swine. There were about forty dwelling houses burnt at that time, besides other buildings. This desolation was followed with the breaking up of the town, and scattering of the inhabitants, and removal of the candlestick after it had been there seated above twelve years.

Concerning the surprising of Groton, March 13, there was not any thing much more material than what is already mentioned, save only the insolence of John Monoco, or one eyed John, the chief capt. of the Indians in that design; who having by a sudden surprisal early in the morning, seized upon a garrison house in one end of the town, continued to it, plundering what was there ready at hand, all that day; and at night did very familiarly in appearance, call out to Capt. Parker, that was lodged in another garrison house, and entertained a great deal of discourse with him, whom he called his old neighbour; dilating upon the cause of the war, and putting an end to it by a friendly peace; yet oft mixing bitter sarcasms, with several blasphemous scoffs and taunts, at their praying and worshipping God in the meeting house, which he deridingly said he had burnt. Among other things which he boastingly uttered that night, he said he burnt Medfield, (though it be not known whether he was there personally present or not) Lancaster, and that now he would burn the town of Groton, and the next time he would burn Chelmsford, Concord, Watertown, Cambridge, Charlestown, Roxbury, Boston, adding at last in their dialect, *what me will, me do*: Not much unlike the proud Assyrian (if his power had been equal to his pride) sometimes threatened against Jerusalem, but was by the remarkable providence of God, so confounded within a few months after, that he was bereft of his four hundred and four score (of which he now boasted) and only with a few more braggadocios like himself, Sagamore Sam, old Jethro, and the Sagamore of Quabaog, were taken by the English, and was seen (not long before the writing of this) marching towards the gallows (through Boston streets, which he threatened to burn at his pleasure) with a halter about his neck, with which he was hanged at the town's end, Sept. 26th, in this present year, 1676. So let thine enemies perish, O Lord, and such contempt be poured on all them that open their mouths to blaspheme thy holy name.

Things looked with a disagreeable face about those parts at this time, yet though the righteous fall seven times, let not their enemies rejoice, for the righteous shall rise again, but their wicked enemies shall fall into mischief, and rise no more. It was ebbing water with New England at this time, and a while after; but God shall turn the stream before it be long, and bring down their enemies to lick the dust before them.

After this, April 17th, Capt. Still being appointed to keep garrison at Groton, some Indians coming to hunt for swine, three Indians drew near the garrison house, supposing it to have been deserted, two of them were slain by one single shot, made by the captain's own hands, and the third, by another shot made from the garrison.

The danger which these inland towns were like to be exposed to from the enemy, after they were driven out of the Narraganset country, was foreseen by the council of Massachusetts, yea, they had some intimation thereof from the enemy themselves; but they were not well able to prevent it in that unseasonable time of the year; no way fit for marching of soldiers, and transporting of provisions (the winter then beginning to break up in this country) for while our forces were up in the Narraganset country in the winter, a couple of christian Indians were sent as spies into the Nipnet and Narraganset country through the woods, in the depth of winter, when the ways were impassable for any other sort of people: These two, James and Job, ordered their business so prudently, as that they were admitted into those Indian habitations as friends, and had free liberty of discourse with them; they were at first a little jealous of them; but by the means of one eyed John (a great captain of the Indians, that afterwards led them that spoiled Groton, who having been a companion of one of the said spies, both in hunting, and in fighting against the Mohawks formerly, so esteemed of him, that he would not suffer any of the rest to touch him) they passed through all the Indian towns lying thirty miles distant from Quabaog, and twenty miles northward of the road to Connecticut.—One of the said spies returned about the 24th of January, informing them that sent him what he had observed, both the number of the Indians (about three hundred in all) also their several towns, and what provisions they had; plenty of venison, much pork from the Englishmen's hogs which they had taken; they confessed also that he and some of his party had killed the people at Nasaway, the last year, suspected to have been done by the Indians of Marlborough: He told them also they intended to burn Lancaster within three weeks after that time, which accordingly they did; adding moreover, that some Frenchmen were with them at Pocomptuck, encouraging of them to go on with their designs, promising them assistance, which made some ready to think the Indians were stirred up by the French to do all this mischief—but more of this afterwards.—What might be gathered from the foresaid promises is easy to conceive: whereupon new forces, with as much speed as the season would allow, were raised and sent into those parts, under the command of Major Savage in chief: They were dispatched away the beginning of March, and appointed to meet with such as should be sent from Connecticut colony, which they did about Quabaog, and so intended to march directly up to those Indian towns about Watchuset Hill, to the northwest; but the Indians were gone, and our forces in pursuit of them taking the wrong path, missed of them, yet ranging through those woods, they were at one time suddenly assaulted by a small party of Indians firing upon them, wounded Mr. Gershom Bulkly, by a shot in his thigh, and killing one of their soldiers; after which as they marched along they accidentally fell upon another small party of the enemy, of whom they slew some and took others to the number of sixteen, yet could not meet with the main body of the enemy, who it seems had passed over a great river by rafts, so that our men could follow them no further, wherefore turning down towards Hadley and Northampton, whither it was supposed the Indians intended to pass, they came very seasonably to the relief of the said towns, which else had been in danger of being lost. For,

March 14th, the enemy fell upon Northampton, and in three places broke through the fortification of pallisadoes, set up round about the town a little before, for their better security; but the town being at that time full of soldiers, they were quickly repulsed, after they had killed four men and two women, and fired four or five dwelling houses, and as many barns, with the loss of many of their lives, as was supposed.

While our forces under Major Savage continued on that side of the country, a sad accident fell out at Sprinfield, the certainty of which it is judged meet here to relate to prevent mistakes; the matter having through a great oversight been otherwise represented than indeed it was, not only to the prejudice of truth, but to the disadvantage of some persons concerned therein. While the soldiers were quartered at a place belonging to Springfield, called the long meadow, three miles from the town below, toward Windsor, several of the inhabitants having most of the winter kept from the public meeting on the Lord's day for fear of the enemy, were encouraged to adventure to the assembly on

the 26th of March, riding in the company of the troopers; but having heard of no Indians thereabouts a good while, were more secure than they had cause; for riding some of them with women behind them, and some with children in their arms, yet not so careful as to keep in the middle, but rather in the rear, and at some distance straggling from the rest of the company, a party of Indians lying in the bushes, as they rode along, fired upon the hindmost, and killed two, and wounded others: Those in the front having also women and maids behind some of them, were at a stand to know what to do, fearing they might expose those women they had in their company, if they should ride back (in that winding road through a woody place for near a mile or two together) to look after them that were behind; at the last, one that came riding up, told the foremost company there was no hurt, and that they were all coming: They that were before rode away with all speed to the end of the town, where setting down the women, the troopers returned back, but too late to recover two poor women, and two children, who upon the first assault were thrown off their horses, and immediately hauled into the bushes, and through a swamp on the other side of a steep bank, so as they could not be heard of all that afternoon, nor the next day till toward night, although they were diligently searched after by all the troopers in and about the town; at last when they were descried just by a swamp side, the cruel wretches endeavoured to kill them all, but in haste only wounded them with their hatchets, yet so as one of the poor creatures recovered; the other, with the children, died of their wounds before they were brought home, or within a little time after. They did not complain of any incivility toward them while they were in their power; but by the farewell given them at their parting, they found it true by their own experience, that the tender mercies of the wicked are cruelty.

There happened no other matter of moment worthy the reporting while our forces tarried in those parts, and the commanders observing that the enemy was turned back again through the woods, towards Massachusetts bay, after a month's time retired back, yet could never meet with the enemy in their return through the woods, although while they were at the towns aforesaid, they understood of several attempts made upon Sudbury and Marlborough, the most part of the latter they destroyed March 26th, which made the inhabitants forsake their dwellings, leaving only a few houses garrisoned with soldiers, the better to secure a passage to the towns westward upon Connecticut river.

The inhabitants of Sudbury, with the soldiers under lieutenant Jacobs, of Marlborough, sufficiently alarmed by the late mischief done about these towns, resolved to try what work they could with the enemy in the night: whereupon going forth, March 27th, toward morning, they discerned where the enemy lay by their fire, (near three hundred of them) and within half a mile of a garrison house, near the place where they had done so much mischief the day before. Such was the courage and resolution of the English, though but forty in number, townsmen and soldiers, that they adventured to discharge upen them as they lay by their fires, when it was so dark that an Indian could hardly be discerned from a better man; yet God so directing, they discharged several times upon them; wounded thirty, fourteen of whom either died of their wounds the same day, or soon after, which had been chief agents in this present mischief against the English. Such was the success of this skirmish that the assailants came off without the loss of a man.

After this time the enemy began to scatter about in small parties, doing what mischief they could, about Massachusetts, killing a man at Weymouth, another at Hingham, as they lay skulking up and down in swamps and holes, to assault any that occasionally looked never so little into the woods: sometimes alarming the towns about Boston, by discharging the guns upon particular persons at Billerica, Braintree, and at Wrentham, near to which place, in the road to Rehoboth, they assaulted one Woodcock's house, killed one man and one of his sons, wounded another, and burnt his son's house.

Notwithstanding the little success of former attempts Philip and his men have one piece more to play in Massachusetts colony, before they go off the stage, and then we shall see their power visibly declining every where, until their final overthrow come upon them. There were several small parties of them scattered up and down all over the country, yet the main body of them was still lurking up and down in those woods that lie between Brookfield, Marlborough, and Connecticut river. Possibly they had some hopes of driving all the country before them to the towns upon the sea coast; for having burnt the deserted houses at Marlborough, April 17th, the next day they set upon Sudbury with all their might (hoping, 'tis probable,) to do there as they had done at the towns next beyond it. They did at the first prevail so far as to consume several houses and barns, and kill several persons ten or twelve of the English, that came from Concord to assist their neighbours at Sudbury, a town five miles distant from them, at the first hearing of the alarm, who unawares were surprised near a garrison, in hopes of getting some advantage upon a small party of the enemy that presented themselves in a meadow; a great number of the Indians that lay unseen in the bushes, suddenly rose up, and intercepting the passage to the garrison house, killed and took them all.

But our sorrows and losses that day are not yet come to their height; for on the same day, that resolute stout hearted soldier, Capt. Wadsworth (who not long before, with not above forty men, rescued Lancaster, when it was in danger to have been all lost at once) being sent from Boston with fifty soldiers to relieve Marlborough, having marched twenty-five miles and then understanding the enemy was gone through the woods towards Sudbury: This wearied company, before ever they had taken any considerable rest, marched immediately back toward Sudbury (that lies ten miles nearer Boston) and being come within a mile of the town, they espied a party of Indians not far from them, about an hundred, not more—as they conceived, these they might easily deal with; who retiring a while, drew Capt. Wadsworth and his company above a mile into the woods, when on a sudden a great body of the enemy appeared, about five hundred as was thought, who compassing them around, forced them to the top of a hill, where they made very stout resistance a considerable while; but the night drawing on, and some of the company beginning to scatter from the rest, their fellows were forced to follow them, so as the enemy taking the chase, pursued them on every side, as they made too hasty a retreat, by which accident, being so much overpowered by the enemy's numbers, they were most of them lost: The captain himself, with one Capt. Brocklebank (a choice spirited young man much lamented by the town of Rowley to which he belonged) and some others that fell into his company as he marched along, scarce twenty escaping in all so that another captain and his fifty men perished at that time, as brave soldiers as any ever employed in the present service.

Thus as in former attempts of the like nature, too much courage and eagerness in pursuit of the enemy, hath added another fatal blow to this poor country.

The same day another party of the English coming from Broofield, whither they were sent as convoy with provisions for the garrison, were in danger likewise of falling into the hands of the same Indians; yet riding upon a good speed, and keeping their guns always ready presented against them they met, they never durst fire at them; only three or four having unadvisedly first discharged their guns against the enemy, and falling too much in the rear of their company, were cut off and lost. It is reported by some that afterwards escaped, how they cruelly tortured five or six of the English that night: Yet whatever their success was this day, it was observed by some (at that time their prisoners, and since released) that they seemed very pensive after they came to their quarters, showing no such signs of rejoicing as they were wont to do in like cases; whether for the loss of some of their own company in that day's enterprise (said to be an hundred and twenty) or whether it was the devil in whom they trusted that deceived them, and to whom they made their address the day before, by sundry conjurations of their powaws? Or whether it were by any dread that the Almighty sent upon their execrable blasphemies, which it is said they used in torturing some of their poor captives (bidding Jesus come and deliver them out of their hands from death, if he could) we leave as uncertain, though some have so reported, yet sure it is that after this day they never prospered in any attempt they made against the English, but were continually scattered and broken, till they were in a manner all consumed. After this time, however they had braved it before, they seemed to apprehend that it was scarce feasible with them to withstand the power of the English, and therefore seemed more inclinable to a peace by several overtures made by them, if they knew how to have brought it about. For during these encounters they were willing to admit of some kind of treaty with the English, about the releasing of sundry of their captives, which they took at Lancaster and elsewhere: to this end sundry attempts were made by help of several of the praying Indians (as they were called) about the redemption of some of the women and children, which were at that time in their possession, and by degrees something was effected that way; possibly their own present sufferings and wants that were upon them,

might induce them thereunto: For by this time the spring of the year came on, their provision was all spent, and they were forced to live wholly upon ground nuts, and upon flesh of the English creatures, both horse and neat cattle, which they daily plundered. The ground nuts running up to seed in the summer, begin to grow so sticky, as they were scarce eatable; the flesh also of the English cattle proving unwholesome for their bodies, filling them with sundry diseases: one of them having eaten much horse flesh, complained that he had eaten much horse and now horse began to eat him, meaning some deadly disease growing upon his eating such rank flesh, unwholesome for their bodies, especially without salt, as their usual manner is. The fishing season also began to come in, wherein they used to take abundance of all sorts, with which those great rivers up the country are abundantly stored; they used to take thereof, and drying it in the smoke, make provision thereof for the greatest part of the year; and if the war continued, they could not but see they should utterly be cut off therefrom; and that if the planting season also were lost, they should be in great want of summer fruits, *sc.* beans and squash (besides their corn) with which they were wont to live all the latter part of the summer. Upon all considerations they seemed pretty inclinable to hearken to a peace, though some were apt to think they would never have kept it further than would stand with their own advantage, and their present desire thereof were only to gain time.

A person formerly acquainted with the Indians about Lancaster, did adventure upon the forementioned overtures, to go amongst them to try if he could not prevail with them for the redemption of the minister's wife, taken captive in February last, from Lancaster, and through the favour of him who has the hearts of all in his hand, inclines them as he pleases, obtained the desired end upon an inconsiderable sum, which gave encouragement to the council to send two messengers on the like errand the same week to procure the redemption of others, not without success: The former, viz. Mrs. Rowlandson being brought to Boston upon the election day, May 3d, it was generally looked at as a smile of providence, and doubtless was a return of prayer, and answer of faith with which her husband had been upheld, and supported from the day of her captivity; his two children also were returned back not long after, more by the overruling hand of God (that turns the captivity of his people as the streams of the south; and something inclining them to pity his servants, that are of themselves more cruel than the sea monsters) than by any contrivance of man's policy.

And yet notwithstanding motions of this nature about the redemption of some of our prisoners still in their hands, there was no cessation of arms between us.

About this time letters were sent down from Connecticut colony, informing the general court then assembled at Boston, that some of the Mohawks (a sort of fierce and savage Indians, yet mortal enemies to those we were at war with) had fallen upon some of Philip's party, and destroyed many of them: Likewise that many of them were destroyed by fevers and fluxes, and other distempers falling amongst them, which was some reviving to our hopes, that the foot of our enemy should slide in due time, and that destruction was hastening upon them though still they were permitted to do mischief in sundry particular places of the country, which must be minded as we pass along.

Those Indians that were our professed enemies, after they had been beaten out of the Narraganset country, February 1st, tarried a while at Winimazeag, a place two days journey north of Quaboag, where they divided themselves into two companies, one of them tarried on that side of the country, the other made toward Plymouth colony, taking Medfield in their way, from whence as they marched along they met with a notable repulse at Boggiston, a small hamlet, or company of farms not far from the said Medfield, where they attempted a garrison, but meeting with stout resistance they left the enterprise, and kept on their way towards Plymouth colony, where they scattered themselves up and down, waiting for opportunities to spoil and destroy the English plantations on that side of the country.

Besides what is already mentioned, on May, 11th, a party of them assaulted the town of Plymouth, burnt eleven houses, and five barns belonging thereunto: On the other side a small party of the English scouting about in pursuit of the Indians, fell upon a party of them that lay waiting in ambush, but being discerned by an Indian in the company of our men that gave timely notice, our soldiers had an opportunity thereby to make the first shot, and thereby not only prevented a mischief to themselves, but killed also some of the enemy (one of whom was observed to be of more note than his fellows, by his attire) the rest fled away from them that pursued, though but a small company; so that there was daily reciprocal acts of hostility in those parts.

Within a few days after this, seven houses and two barns more were burnt by the enemy in and about Plymouth; who did the like mischief about the same time to the remaining of Namasket or Middleborough.

About this time another sort of Indians that belonged to Wamesit, a place near Chelmsford, bordering upon Merrimack, (who had been provoked by the rash, unadvised, cruel acts of some of the English, about Oct. 27th, and Nov. 4th, had fired upon them several guns, both at Chelmsford and Woburn, killing some, and wounding others, upon suspicion that the said Indians were guilty of burning a barn and hay stack not far off) suddenly turned our enemies, after the winter was over; having first withdrawn themselves from the place assigned them, and where they had been relieved all the winter (some of them after a former revolt) and took their opportuty to fire Mr. Falconer's house in Andover town, early that spring, and wounded one Roger Marks, and killed his horse. Two more houses about Shawskin, beyond the said Andover, were burnt about March 10th: Also they killed a young man of the said town, April 8th, the son of George Abbot; and another son of his also was carried away the same day, who, notwithstanding, was returned some few months after, almost pined to death with hunger.

At the same time they killed some of their cattle, cutting out only the tongues of some of them for haste, being shot at by several of the inhabitants from their garrison.

March 10th, at Concord, two men going for hay, one of them was killed. At Chelmsford, the said Wamesit Indians, about March 18th before, fell upon some houses on the north side of the river; burnt down three or four that belonged to the family of Edward Colburn: the said Colburn, with Samuel Varnham, his neighbour, being pursued, as they passed over the river to look after their cattle on that side of the river; and making several shots against them, who returned the like again upon the said Indians, judged to be about forty; what success they had upon the enemy, was best known to themselves; but two of Varnham's sons were slain by the enemy, shot before they could recover the other side of the river. April 16th, also, were fourteen or fifteen houses were burnt there.

Not long before this, February 1st, 1676, Thomas Eames, that kept a farm at Sudbury, whose dwelling was three or four miles out of town, had his house assaulted and fired, his wife killed, and his children carried captive among the Indians.

Also two men were killed at a farm about Concord, Isaac and Jacob, about the middle of February and a young maid that was set to watch upon a hill, of about fifteen years of age, was carried away captive, who strangely escaped away upon a horse that the Indians had taken from Lancaster a little before. In the like strange manner did one of Eames' children escape away about May 3d last, travelling thirty miles alone in the woods without any relief till he came to an English town. Eames' house was assaulted when he was from home, by an Indian called Netus, not long after slain at Marlborough, which had been very familiar with the English, with nine or ten more of his company, as perfidious and barbarous as himself. They burned all the dwellings that belonged to the farm, corn hay and cattle, besides the dwelling houses with what was therein; it is possible those at Concord were killed by the same hands about a fornight after.

Many such like remarkable instances of special providences might be mentioned, if it were convenient to insert such particular passages into the general narrative of the late troubles with our barbarous enemies.

On May 3d a party of them killed a man at Haverhill, upon the edge of Merrimack river, and passing over the said river to Bradford, spoiled another family, killing one Thomas Kimball, and carrying his wife and five children captive, forty miles up into the woods; although it was questioned whether this last mischief was done by any of Philip's party but rather by some that belonged to the eastward Indians, of which there may be occasion God willing, to speak more of afterward.

For the suppressing these insolencies, several companies of fresh soldiers, both horse and foot, were raised in Massachusetts by the governor and council of that colony, and sent out to suppress the common enemy; the foot under the command of Captains Still, Cutler and Holbrook; the horse under the command of Captains Brattle, Prentice and Henchman; the last of whom was commander in chief. These several companies modelled as aforesaid, were sent out April 26th, 1676, to range the woods towards Hassanamesit.

The 6th of May they met with a considera-

ble party of the enemy; they were first discovered by the Natick scouts pursuing a bear, and at first not discovering that the Natick Indian scouts belonged to our men, it gave some advantage to our forces; our horsemen falling upon them before they were aware, killed and took of the enemy about 16, which they took no notice of at the present, although it was confessed by themselves that they lost twenty in that encounter. It was reported that the sounding of a trumpet without order did much hurt, but the commander in chief affirmeth that it was no disadvantage to the service in hand, it neither being heard by our own foot, nor yet by the enemy. If any error was committed by the English companies, it was that the horse did not timely enough draw down from the top of the hill, whereby they came to be discovered by the enemy, who thereupon made the more haste to escape; however, it was no small loss to the enemy, some of the slain being known to be considerable persons; and it struck such a terror into them that they never durst face our men aftewards; for although after our men returned to their quarters at Medfield, they saw two hundred fires in the night, yet they could never come near them again to fight any company of them; but the season proving rainy hindered any further pursuit of them at that time. And soon after this the soldiers being visited with sickly distemper by reason of an epidemical cold at that time prevailing through the country, they were for the present released for the recovery of their health with intent to be called together again at a more convenient time; this was done the 10th of May.

During this interval of time, upon a report that a party of the enemy were discovered about Rehoboth, busy in fishing in a river thereabouts, Capt. Brattle was sent up about the 23 of May, who with the help of some of the inhabitants, killed 11 or 12 of them, without the loss of but one of our men. Had they not discovered some of ours on the opposite shore, it was conceived a greater spoil might have been made amongst them.

But in the next place we must take notice of the proceedings of the enemy about Connecticut. The greatest body of them made towards Plymouth colony early in the spring, as was said before, where we shall leave them for the present, and observe what the remaining part of them did westward.

Some scattering parties were skulking about Springfield and those lower towns, upon a small number of whom Capt. Holyoke (newly chosen captain of Springfield, in the room of his father lately deceased) handselled his office early in the spring; for having notice of some of them in those woods, he marched after them with ten or twelve young men, and waiting his opportunity, surprised them near the great river so that two or three or them were left dead upon the place; another mortally wounded got on an island in the river, where it is concluded he took his last night's lodging. The other being sorely wounded was taken alive and brought home to Springfield, where he confessed many things to one of the inhabitants that understood their language, owning the truth in many things against his own company, and died soon after of his wounds.

This was but a preparative to an higher piece of service which Capt. Holyoke was soon after engaged in and wherein he acquitted himself beyond expectation, and taking more pains than ordinary in making his retreat, he got a surfeit, which ended his days the September following, near Boston.

About the beginning of April likewise, some of the inhabitants about Hadley, attending their tillage at Hockanum, within three miles of the town, and having a guard of soldiers with them, yet three of the company were casually slain by a party of the enemy that lay in wait for such an opportunity. One of them was Mr. Goodman, a deacon of the church, that went a little beyond the command of the soldiers that came to guard them, to view the fence of his own land, and two others, that contrary to express orders would venture upon the top of an high hill near by, to take a needless and unseasonable view of the country, were shot down by the enemy before they could recover their corps du guard.

But the great company of the enemy that stayed on that side of the country, and about Watchuset hills, when the rest went towards Plymouth, though they had been disappointed in their planting by the death of Canonchet, were loth to lose the advantage of the fishing season then coming in; wherefore, having seated themselves near the upper falls of Connecticut river, not far from Deerfield, and perceiving that the English forces were now drawn off from the lower towns of Hadley and Northampton, now and then took advantage to plunder them of their cattle, and not fearing any assault from our soldiers, grew a little secure, while they were upon their fishing design, insomuch that a couple of English lads lately taken captive by the enemy, and making their escape, acquainted their friends at home how secure they lay in those places, which so animated the inhabitants of Hadley, Hatfield and Northampton, that they being willing to be revenged for the loss of their cattle, besides other preceding mischiefs, took up a resolution with what strength they could raise among themselves (partly out of garrison soldiers, and partly of the inhabitants) to make an assault upon them, which if it had been done with a little more deliberation, waiting for the coming of supplies, expected from Hartford, might have proved a fatal business to all the sad Indians: yet was the victory obtained more considerably than at first was apprehended; for not having much above an hundred and fifty fighting men in their company, they marched above twenty miles silently in the dead of the night, May 18th, and came upon the said Indians a little before break of day, whom they found almost in a deep sleep, without any scouts abroad, or watching about their wigwams at home; for in the evening they had made themselves merry with new milk and roast beef, having lately driven away many of their milk cows, as an English woman confessed that was made to milk them.

When they came near the Indians' rendezvous, they alighted off their horses, and tied them to some young trees at a quarter of a mile distance, so marching up, they fired briskly into their wigwams, killing many upon the place, and frighting others with the sudden alarm of their guns, and made them run into the river where the swiftness of the stream carrying them down a steep fall, they perished in the waters, some getting into canoes (small boats made of the bark of birch trees) which proved to them a Charon's boat, being sunk, or overset by the shooting of our men, delivered them into the like danger, the waters giving them thereby a passport into the other world: Others of them creeping for shelter under the banks of the great river, were espied by our men and killed with their swords: Capt. Holyoke killing five young and old, with his own hands, from under a bank. When the Indians were first awakened with the thunder of their guns, they cried out Mohawks, Mohawks, as if their own native enemies had been upon them; but the dawning of the light soon notified them of their error, though it could not prevent their danger.

Such as came back spake sparingly of the number slain; some said they could not in reason be less than two or three hundred of them that must necessarily perish in the midst of so many instruments of destruction managed against them with such disadvantages to themselves. Some of their prisoners afterwards owned that they lost above 300 in that camisado, some whereof were principal men, sachems, and some of their best fighting men that were left, which made the victory more considerable than otherwise it would have been; nor did they seem ever to recover themselves after this defeat, but their ruin immediately followed upon it.* Yet such was the awful hand of providence in the close of the victory, mixing much bitter with the sweet that it might well be called a costly victory to the conquerors, that so no flesh should glory in itself.

The Indians that lay scattered on both sides of the river, after they recovered themselves and discovered the small number of them that assailed them, turned head upon the English, who in their retreat were much disordered for want of the help of the eldest captain that was so enfeebled by sickness before he set out, that he was no way able for want of bodily strength (not any way defective for want of skill or courage) to assist or direct in making the retreat: For some of the enemy fell upon the guards that kept the horses, others pursued them in the rear, so that our men sustained very much damage as they retired, missing after their returns thirty eight of their men; and if Capt. Holyoke had not played the man at a more than ordinary rate, sometimes in the front, sometimes in the flank and rear, at a fatal business to the assailants, our loss would have been still greater. The said Captain Holyoke's horse was shot down under him, and himself ready to be assaulted by many of the Indians, just coming upon him, but discharging his pistols upon one or two of them, whom he presently dispatched, and a friend coming to his rescue, he was saved, and so carried off the soldiers without any further loss. It is confidently reported by some that were there present at this engagement, that one told above an hundred Indians left dead upon the place; and another affirmed that he told near an hundred and forty swimming down the falls, none of which were observed to get alive to the shore save one.

* There was but one of our men killed in the engagement: their loss following was owing to the report of a captain taken, who said Philip was near with 1000 men: word was then given for every man to shift for himself a panic seized the men, who instantly fled in confusion.

The loss that befel our men in the retreat was occasioned principally by the bodily weakness of Capt. Turner, unable to manage his charge any longer, yet some say they wanted powder which forced them to retire as fast as they could by Capt. Turner's order. It is also said by one present at the fight, that seven or eight in the rear of the English through haste, missed their way, it being a cloudy dark morning, and were never heard of again; and without doubt fell into the Indians' hands, and it is feared some of them were tortured. About seven days after this they had a mind to try the chance of war again, and see if they could not recover their loss by returning the like upon the English: For,

May 30th, a great number of them (supposed to be six or seven hundred) appeared before Hatfield, fired about 12 houses and barns without the fortification of the town; a number of houses in the centre of the town were surrounded with palisadoes; these were attacked in the daytime, when the men were all out in the fields, except one aged man; they drove away multitudes of their cattle and sheep, spreading themselves in the meadow near the town; which bravado so raised the courage of their neighbours at Hadley that twenty-five resolute young men ventured over the river to relieve Hatfield in this distress, who charged the enemy with such undaunted courage and resolution (*Audaces fortuna juvat*) that they beat down five or six at the first shot they made; so making way through the thickest of their enemies, that lay ready to take aim at them behind every tree as they passed by; yet they escaped all their shot till they came within a little of the town, where they lost five of their number.

The enemy being amazed at the resolution of our men, being but so small a handful, that they fled immediately from the town; having lost twenty-five of their men in the enterprise. The council of Massachusetts gathering by these proceedings of the Indians, that their desire of peace was only to gain time, ordered that the forces raised before April 27th, and for a time released, should be hastened out again to range the woods towards Hadley, and those parts, made an agreement with Hartford colony to send forces from thence to meet them about Brookfield, and so to scout along on both sides Connecticut, to disrest the enemy what they could, and keep them from fishing in those waters, their hope of planting being now almost over. To this end, about May 30th, 1676, the forces under Capt. Henchman were called together again, and sent to Brookfield, to meet with those expected from Hartford colony; in the way, ours by direction of Tom Doublet (a Natic Indian, who was a little before employed in the redemption of captives) following tracks of Indians, came upon a party of the enemy fishing in Weshacom ponds, towards Lancaster, of whom they killed seven, and took twenty-nine, mostly women and children; yet belonging to considerable persons, it made the success the more to be valued. Our forces being by this means retarded, could not meet with those of Connecticut at Brookfield, but followed them the week after; having first returned from Weshacom, to Marlborough to supply themselves with ammunition, and so marched directly towards Hadley, where they met with Connecticut forces: and from thence according to mutual agreement, ours marched on the east side of the river, and Connecticut forces to the west up towards Squakeag (now Northfield,) coming to Deerfield, and the great falls thereabouts, they sent up their scouts, but not hearing of the enemy, they marched up no higher, being in no good capacity to have gone further if there had been occasion, by reason of a tedious storm of rain which occasioned much damage in their ammunition and provision. While our forces lay about Deerfield, some of our soldiers ranging, lighted upon the body of Capt. Turner, about Green's river, in passing of which stream he was supposed to have received his mortal wounds.

While our forces continued thereabouts, they did the enemy some little spoil, in seizing much of their fish and goods stolen from the English, and hid in their barns under ground; conjecturing also that they found four or five places where some of the English had been tortured to death by cruel burning after they had been fastened between stakes set in the ground; but not meeting with any of the enemy, they all returned home, conceiving that having been forced from their quarters in those parts, they were drawn down lower towards the English plantations eastward viz. Plymouth and Massachusetts. What success Capt. Henchman's forces had in their retiring homeward, and what they observed of the motion of the Indians, may be seen in a letter of his dated June 30th: "Our scouts brought intelligence that all the Indians were in a continual motion, some toward Narraganset, others toward Watchuset shifting gradually, and taking up each others quarters, and lay not above a night in a place. The twenty-seven scouts brought in two squaws, a boy, and a girl, giving account of five slain. Yesterday they brought in an old fellow, brother to a sachem, six squaws and children, having killed five men, and wounded others, if not killed them, as they supposed, by the blood found in the way, and a hat shot through. These and the others, inform that Philip and the Narragansets were gone several days before to their own places, Philip's purpose being to do what mischief he could to the English. By advice I drew out a commanded party under the conduct of Capt. Sill, viz. sixteen files of English, all my troops, and the Indians, excepting one file, being all we could make provision for, for what with the falling short of the bread promised us, and a great deal of that we had, proving mouldy, the rest of the forces had but one biscuit a man to bring them to this place: This party was ordered towards Watchuset, and so to Nashaway and Washakem ponds, where we have notice Indians were, and so to return unto this place: whereby your honour's letters that came to me yesterday morning, I undestood that provision was ordered for us and which we found to our great relief, which we met with last night coming hither, weary and hungry. The commanded party we left at Quonsiquomon where they intended to stay a while for the last scouts we sent out: Eleven prisoners we had in all, two of the eldest by council we put to death, the other nine the commissary is ordered to convey to Boston, with the baggage, horses, and some of their attendants not fit for the service.

DANIEL HENCHMAN."

It plainly appears by the contents of the said letter, as by many other testimonies, that about this time the Indians, our enemies, who hitherto had been linked together as brethren in iniquity and cruelty were now strangely divided and separated the one from the other; some impute it to an assault made upon them by the Mohawks, who falling upon Philip with the inland Indians, slew about fifty of them; whereupon those of Philip's company resolved to return to their own country and do what mischief they could to the English thereabouts; this was reported by an Indian brought to Seaconk, June 29, 1776, taken at Providence.

Others are ready to think that it was upon some quarrel amongst themselves, occasioned by an evil spirit sent from God upon them, that thereby they might, being scattered, the more easily be taken and ruined by the English, now that the time of vengeance was come when they shall be called to an account for all their former outrages and cruelties; for now is the snare hastening upon them wherein they shall be hampered in their own devices so to be taken and destroyed. It cannot but be acknowledged as a very remarkable providence, that Capt. Henchman in his late expedition to Hadley, killed and took about 84 of the enemy, without the loss of any one of his own men; the like favourable success happened to Major Talcot in his passage from Norwich to Quabaog, as was said before, and soon after his return.

But by the time our forces were returned home as far as Sudbury, they were ordered, upon the solicitation of the governor of Plymouth, two companies of them at least, to march away immediately to Dedham, and so to Seaconk, or Rehoboth, to join Major Bradford in the pursuit of Philip, who was it seems with many hundreds of his barbarous followers fallen upon the English plantations thereabouts, and whither also a little before, Capt. Brattle with a troop of horse, and Capt. Mosely with a company of foot, were sent up from Boston to pursue after them, now flocking in great numbers to those woods. There was at this time no small hopes of surprising Philip; several reports being brought that he was seen in this and that place, not having above twenty or thirty men attending on him; but his time was not yet fully come, nor had he as yet fully accomplished all that mischief he was like to be suffered to do: For on the 1st of July, 1676, a party of his Indians committed a horrid and barbarous murder upon Mr. Hezekiah Willet of Swanzy, a hopeful young gentleman as any in those parts. They used frequently to keep a sentinel on the top of their house from a watch-house built thereon, whence they could discover any Indians before they came near the house, but not hearing of the enemy in those parts for a considerable time, that necessary piece of circumspection was omitted that day, whereby that deserving person was betrayed into their cruel hands; for within a quarter of an hour after he went out of his own door, within sight of his house, he was shot at by three of them at once, from every one of whom he received a mortal wound; they after their barbarous manner took off his head, and carried it away with them (which however was soon after recovered) leaving the trunk of his body behind, as a sad monument of their inhuman

cruelty. The same Indians, not being above thirty in number, took away a negro belonging to the same family, who being faithful to his master's and the country's interest, ventured his life to make his escape, which was the preservation of many others; for the said negro being a little acquainted with their language discovered to the English after his escape Philip's purpose to seize such and such places: in the first place to assault Taunton, which in all probability had been in great danger, if their treacherous plots and purposes had not so wonderfully been made known beforehand. The said negro affirmed, that there was near a thousand of them; for he observed that although they killed twenty head of neat cattle over night, yet there was not any part of them left the next day at eight o' clock in the morning. By this special providence the enemy was defeated of their purpose, and never after had an opportunity of doing any considerable damage to the English in that part of the country. So, after this day, we may truly date the time of our deliverance, and beginning of revenges upon the enemy; now is their own turn come, when it shall be done unto them as they have done unto us: they that before led others into captivity must, henceforth go into captivity themselves: and they that killed with the sword must themselves be killed with the sword, as in the sequel of this narrative will abundantly be manifest: the history of which before we shall any further pursue, we must a little while wait upon our friends (those forces sent from Connecticut) in their return back into their own colony: before it be done, some things should be premised concerning the occasion of their coming, and the success that did attend them in their march thither.

Our friends and brethren of that colony, although they had never actually felt half of those miseries that befel the people of the other two, yet never denied their assistance to the suppressing of the common enemy, yea, sometimes they did offer it, before it was expressly desired, according to the tenor of the articles of confederation and rules of common prudence; considering that if the fire of this war was not timely extinguished it would endanger their own fabric; therefore according to agreement, the council of that colony ordered their sucessful commander, Major Talcot, to meet our forces at Quabaog, or Brookfield, in order to the pursuing of the enemy in those parts. In the way as they were marching from Norwich thither, divine Providence so far smiled upon the enterprise, as to give them an opportunity to surprize 51 of the enemy, of whom 19 were slain, without the loss of any one of their own company, which could not but much enhance the price of the victory to the conquerors. The like success had their friends which they left behind (the volunteers gathered out of three towns by the seaside, New-London, Stonington and Norwich) and who were some of them released by Major Talcot, when he first began his march, that they might better in the absence of the army guard their own towns; for before the return of their forces under Major Talcot to that side of the country, they had made two expeditions against their enemies, the Narragansets, that were skulking up and down on that side of the country, in one of which they killed and took above 30, the most of whom being men, are said to have been slain by them. In the other 45, the most of whom probably were women and children, but being all young serpents of the same brood, the subduing or taking so many, ought to be acknowledged as another signal victory and pledge of divine favour to the English. But to return, it was not without the special direction of Providence that those Hartford forces were sent to those western towns a week before those of Massachusetts could get thither; for otherwise one or more of those towns might have been lost; seeing that on the 12th of June, soon after, if not the next day after they arrived there, the enemy, as if resolved to try the utmost of their power, violently assaulted the town of Hadley, with a body of about 700 men, at five or six o' clock in the morning laying in ambush at one end of the town, while the greater part of them were alarming the other; but the Connecticut forces being at that time quartered in the towns thereabouts, (who were English, and friendly Indians, Pequods and Mohegins, about 500 in all) that were ready at hand, besides those that had been quartered there ever since March, who had been left by Major Savage when he left those parts under the command and charge of Captain Turner slain at the great falls, as is noted before, but since commanded by Captain Swain. These by their joint and ready assistance, wherein the fence of palisadoes surrounding the town was no little advantage, gave the Indians such a smart repulse, that they found the place too hot for them to abide it; for the soldiers or townsmen within firing a piece of ordnance, so affrighted the savages, or a party of them against whom it was discharged, that although they had just before surprised a house on the north part of the town, yet they instantly fled leaving some of their dead upon the place; nordid they any considerable mischief with all their numbers, save firing a barn about that end of the town and killing two or three of our soldiers, or two daring inhabitants, who would against express order, venture to go without the fortification.

It was accounted by some that were present near the time of that assault, a great oversight that having so fair an opportunity to chace the enemy upon so considerable advantage, it was let slip, and not improved, for Connecticut soldiers being all, or most of them furnished with horses, they might have been soon overtaken, and many of them destroyed, but God hid it from their eyes. The commander in chief, it is said, quartered at one end of the town, (Hatfield was then within the limits of Hadley) on the west side of the river, and did not apprehend the advantage till the season was over; nor was any such assault expected from the enemy so early in the morning; it being a general observation heretofore, that they seldom or ever used to make any attempts in the night; part of which could not but be improved in way of preparation for such a design. But the Lord of Hosts who is wise in council, and wonderful in working will find some other way to destroy our enemies, wherein the hand of his providence should more remarkably be seen, that so no flesh should glory in its own wisdom or strength, but tha salvation might appear to be from the Lord alone. The rest of this month was spent without any other matter of moment happening therein.

The governor and council of Massachusetts, taking into serious consideration the many merciful occurrences that had returned upon us, notwithstanding the mixture of many dispensations of a contrary nature, thought themselves bound to make some public acknowledgment thereof, to him whose name alone is worthy to be praised. The 29th of June was set apart as a day of public thanksgiving to God, who had thus remembered his people in their low estate. And that matter of thanksgiving might not be wanting at the day appointed, the very day before were most of our English captives brought back from the Indians, and many more soon after to the number of 16, whose mouths might then well be filled with laughter and their tongues with singing, both of themselves and all that were any way concerned in their welfare.

And as this day appointed for solemn and public thanksgiving was ushered in by several special mercies, so also was it followed with many remarkable benefits. For besides the preserving the town of Northampton, March the 14th, and Hadley June the 12th, by the timely sending our forces the very night before they were assaulted; the saving of the people of Marlborough from being cut off, was very observable, when Mr. Graves by occasionally going from the sermon with the extremity of the toothache, March 26th, discovered the Indians ready to assault the town, and the people might have been cut off had not the accident happened. It is certain that after the end of this month the power of the enemy began everywhere to fail; for the body of the enemy that lurked about Connecticut river all this spring, being visited with sundry diseases, disappointed of the fishing, and put by their planting, began to be at variance among themselves; the Hadley and Pocumtuck (now Deerfield) Indians quarrelling with Philip for bringing all this mischief about, and occasioning the English and them to fall out, with whom they had always good correspondence, and lived lovingly together, but now they were like to be ruined by the war. This quarrel proceeded to that height, that from that time forward, those several Indians that had for so long a time been combined together, resolved now to part, and every one to shift for themselves, and return to their own homes; Philip to Mount Hope, and the Narragansets to their own country again: the Nipnets and the river Indians bending their course westward, others northward, towards Pennicook, upon Merrimack, intending to shift for themselves as well as they could for the future; all which is like to be the real and true state of the case with the Indians which were our enemies; for the next news we heard of Philip, was that he had returned back to Mount Hope now like to become Mount Misery unto him and his vagabond crew, and that his friends and allies that had hitherto stood as neuters, waiting only which way the scale of success and victory would turn, began now to sue for mercy at the hands of the English: The Massachusetts' government having understood something of this nature, put forth a declaration, that whatsoever Indians should within fourteen days next ensuing, come in to the English might hope for mercy. Amongst sundry that came in, there was one that was one named James, the printer, the superadded title dis-

tinguishing him from others of that name; who being a notorious apostate, that had learned so much of the English as not only to read and write, but had attained likewise some skill in printing, (and might have attained more had he not like a false villain ran away from his master before his time was out) he having seen and read the said declaration of the English, did venture himself upon the faith thereof, and came to sue for his life; he affirmed with others that came along with him, that more Indians had died since this war began, of diseases (such as other times they used not not to be acquainted with, than by the sword of the English.

Not long after many of them came and offered themselves, to the number of near two hundred, men, women and children; and many more would have done the like; but their consciousness of guilt made them conclude that their cruelties and barbarous murders could never be forgotten by the English. But what occurrences happened next shall appear in their order. About the end of June news was brought to Boston that Philip with a small party of his men lurked about Swansy or Rehoboth, and that he might easily be taken; an Indian offering to bring them to the place where they might find him; whereupon soldiers were instantly sent away from Boston, who spent some time in searching all the woods on that side of the country, but at last were forced to return, having missed our soldiers upon the same account, under Major Bradford, who by the help of some Indians of Cape Cod, always true to the interest of the English, not only escaped an ambush laid for them, whereby most of them might have been cut off, but slew many those of that laid in wait for them, without any loss to themselves; yea further, a squaw sachem of Seaconet, one of Phillp's allies, having first sent three messengers to the governor of Plymouth, to sue for life and liberty, promising submission to their goverment on that condition; but understanding that Plymouth forces were abroad before her messengers returned, she with her people about ninety in number, rendered themselves unto Major Bradford, so that above one hundred and ten, on a moderate computation, were killed that day.

The Connecticut forces had the like success when sent into the Narraganset country under the command of the wonderfully successful Major Talcot, Capt. George Dennison, and Capt. Newbury, with other worthy commanders of the same forces; For, on the 2d of July, 1676, as the said commanders with the forces under them were pursuing the enemy in and about the Narraganset country towards Mount Hope, hearing that Philip with his regiment of Wampanoogs was thereabouts their Indian scouts from the top of a hill discovered a great number of the enemy that had newly pitched their station within the semicircle of a swamp. The English soldiers were all mounted on horseback, to the number of three hundred; wherefore the commanders ordered the Indians to be ready at the top of a hill, upon a signal given to run down rapidly upon the enemy who were securely lodged in the hollow of a swamp just opposite them, while the horsemen being divided into two squadrons to ride round the hill, so that at the same instant both the horsemen upon the two wings, and the Indians afoot rushing down suddenly upon the enemy, put them into a terrible fright, making a lamentable outcry, some getting into the swamp, the rest that were prevented by the horsemen and friendly Indians coming so suddenly upon them, were all taken prisoners; Capt. Newbury with his troop alighted from their horses ran into the swamp after them, where they killed at least an hundred, as was judged by some then present, taking also many prisoners out of those habitations of darkness, the enemy scarce daring to make any resistance; for none of the English, and but one or two of the Mohegins and Pequods were hurt in the assault; yet it was affirmed by a captain present on the place that with those they killed and took at Warwick neck on their return home, (which were not above sixty) that they killed and took of the enemy at that time above 3000 young and old. At the same time was taken the old squaw of Narraganset colony, called the old Queen.

They were necessitated with this booty to return homewards to gratify the Mohegin and Pequod Indians that accompanied them, who had done them very good service in the pursuit, having lost one or two of their men in the chase; but their return home was as it proved in the issue, more beneficial than their longer stay might have been, to have made a fruitless pursuit after Philip, (whose time was not yet come although hastening apace) for in their return they met 60 of the enemy, all of whom they slew and took, so as their sword returned not empty.

Among the prisoners then taken was a sprightly young fellow, seized by the Mohegins, who desired of the English commanders that he might be delivered into their hands, that they might put him to death in their own way, and sacrifice him to their cruel genius of revenge, in which brutish and devilish passion they most of all delight in. The English, though not delighted in blood, yet at this time were not unwilling to gratify their humour, lest by a denial they might disoblige their Indian friends, of whom they lately made so much use—partly also that they might have occular demonstration of the savage, barbarous cruelty of the heathen. And indeed, of all the enemies that have been the preceding narrative, this villain does most deserve to become an object of justice and severity; for he boldly told that he had with his gun dispatched 19 of the English, and that he had charged it for the 20th, but not meeting with another, and unwilling to lose a fair shot, he let fly at a Mohegin, and killed him; with which having completed his number he was fully satisfied. But as is usually said, justice vindictive hath iron hands, though leaden feet—this monster is fallen into the hands of those that will repay him seven-fold. In the first place therefore, making a great circle they placed him in the middle that all their eyes might at same time be pleased with the utmost revenge upon him; they first cut one of his fingers round in the joint, at the trunk of his handwith a sharp knife, and then broke it off, as was formerly the custom to do with a slaughtered beast before he is uncased; and then they cut off another and another after that till they had finally dismembered one hand of all its digits, the blood sometimes spirting out in streams a yard from his hand; which barbarous and unheard of cruelty the English were not able to bear, it forcing tears from their eyes, yet did not the unhappy victim ever relent or show any signs of anguish; for, being asked by his tormentors how he liked the war? he liked it very well, and found it as sweet as Englishmen do their sugar. In this frame he continued till his executioners had dealt with the toes of his feet as they had done with the fingers of his hands before; all the time making him dance round the circle, and sing till he had wearied both himself and them. At last they broke the bones of his legs, after which he was forced to sit down, which it is said he silently did, till they knocked out his brains.

Within a few days after, 200 of the enemy within Plymouth jurisdiction being distressed with famine and fear of danger, came and submitted themselves to the goverment there, but three of the company were presently detected of a cruel murder, and villanous assault upon one Mr. Clark's house of Plymouth by a well minded squaw that was among them (hoping that such a discovery would be pleasing to the English) and accordingly adjudged forthwith to undergo condign punishment, which the rest that surrendered themselves, did not in the least resent; such kind of villains being always exempted from acts of favour and mercy. Those 200 that had newly surrendered themselves, that they might give full proof of their fidelity, offered to lead a party of the English to a place not far off, where twenty more of the enemy might be surprised, amongst whom also was one known to be a bloody murderer of an Englishman the year before; accordingly 8 Englishman took 14 of the said Indians, and the next day brought in all the aforesaid 20 of the enemy together with; the said murderer, who was presently after executed, and the rest taken into favour.

It is affirmed also that five or six sachems of Cape Cod, towards the eastern part of it, came with 300 Indians to make peace with the English, on the 6th July, one of thes aid sachems earnestly desiring the English that none of them might be suffered to sell any strong liquors to the Indians, the trading of which, possibly both in a measure contributed to the present mischief.

The next day, July 7th, a small party of ours, with a few friendly or christian Indians with them, killed and took seven of the enemy in the woods not far from Dedham, one of which was a Narraganset sachem, who either himself informed, or by some other at that time certain intelligence was brought to Boston, that some of our enemy Indians had got to Albany, informing people there, that they might the more easily get powder and ammunition, that the English and they were now at peace.

One of the said Indians was the sachem of Springfield, a bloody and deceitful villain; it is hoped that he is now taken in the snare from whence he shall not be suffered to escape.

Philip by this time could not but think his ruin was near at hand; yet that he might, in imitation of him that stirred up all this mischief express the more wrath, because he knew his time was but short, intended if possible to destroy one more town before his overthrow came; wherefore on the 11th of July, with all the force he could get, or that he had left, he intended to set upon Taunton, having as was

conceived, many hundreds in his company; but his design being strangely discovered by a negro whom they had taken captive a little before, that having lived near the Indians before, understood much of their language, who making his escape from them, acquainted the inhabitants with the plot who having timely notice, furnished themselves with soldiers whereby they were able to repulse the enemy upon his first approach; so that he only fired two houses, and then fled away: Except the Lord keepeth the city the watchman watcheth in vain.

The 22d of this month of July, as is hinted before, the companies sent from Concord, May 30th, up toward Hadley, having spent much time and pains in pursuit of Philip all the country over (whom they could not overtake) having tired themselves with many long and tedious marches through the desert woods before they returned home, some of them were sent towards Mount Hope, yet their labour was well improved, and followed with good success at the last: For in ranging those woods in Plymouth colony, they killed and took (by the help of Capt. Mosely's company of Plymouth colony) an hundred and fifty Indians, without the loss of a man.

It was feared that Philip and his company would have returned into the Nipnet country, to prevent which several horsemen were sent to guard the passage; but he lurked about his own country in swamps and other secret places, where he was as yet hid from the sight of the enemy, although many times they happened to lodge very near him, insomuch as an Indian captive promised in two hours time to bring our soldiers to the very place where he was; but they not being able to pass the nearest way, came a little too late; for they being so closely pursued, hasted away leaving much of their treasure behind them; their kettles boiling over the fire, their dead unburied, and 20 of their party were overtaken, that fell into the English hands: Philip himself, and some few of his straggling followers making their escape by a raft over an arm of the sea, into another neck of land, on Pocasset side, not daring to trust himself any longer in Metapoiset woods, so full of our English soldiers, as those of Plymouth, as of Massachuchusetts colony, who almost every day meeting with some of his party, much lessened his number. Capt. Church, that active and unwearied commander of Plymouth colony, was at this as well as long before, out upon the chase with but 18 English, and 22 Indians that were friends, had four several engagements with Philip's party, wherein he spoiled 76 of the enemy, without the loss of one of his own men. In several of these skirmishes those Indians that upon submission had their lives given them, have done notable service in hunting out the enemy in all their lurking places.

At another time they took Philip's squaw, and one of his chief counsellors; and about the same time another sachem about Pocasset with forty Indians submitted himself to the government of Plymouth, on promise of life and liberty. It seemed that now the time of our deliverance was come, and the time also for the destruction of our enemies: For the last week in July, Massachusetts understanding that some Indians were seen roving up and down the woods about Dedham, almost starved for want of victuals, sent a small company of 26, with about 9 or 10 christian Indians, who pursued and took 50 of the enemy, without any loss to the English; at which time also a great quantity of wampampeag and powder were taken from the enemy. That which increased this victory was the slaughter of Pomham, who was one of the most valiant sachems that belonged to the Narragansets, whose courage and strength was so great, that after he had been mortally wounded in the fight so as he could not stand, yet catching hold of an Englishman that by accident came near him, had done him an injury if had not been presently rescued by one of his neighbours. Amongst the rest of the captives at that time was one of the said Pomham's sons, a very likely youth, and one whose countenance would have bespoke favour for him, had he not belonged to so bloody and barbarous an Indian as his father was.

These successes being daily spread abroad among the Indians, put many of them in a trembling condition, not knowing well how to dispose of themselves. Some that had been less active in these tragedies, and were rather led by others than any wise inclined to mischief themselves, of which number was one of the Nipnet sachems, called Sagamore John, who, July 27, came to surrender himself to the governor and council of Massachusets at Boston, bringing along with him 180 of the enemy Indians. This John, that he might the more ingratiate himself with the English, whose favour he was now willing to seek after, did by a wile get into his hands one Matoonas, an old malicious villain who was the first that did any mischief within Massachusetts colony, July, 14th, 1675; bearing an old grudge against them as is thought, for justice that was done upon one of his sons, 1671, whose head ever since hangs upon a pole near the gibbet were he was hanged up: The bringing in of this malicious catiff was an hopeful presage that it would not be long before Philip himself, the grand villain, would in like manner receive a just reward of his wickedness and murders.

Sagamore John, who came in the 27th of July, affirmed that he had never intended any mischief to the English at Brookfield the last year (near which village it seems his place was) but that Philip coming over night amongst them was forced, for fear of his own life, to join with them against the English. Matoonas also when he was brought before the council, and asked what he had to say for himself, confessed that he had rightly deserved death, and could expect no other, adding withal, that if he had followed their counsel, he had not come to this; for he had seemed to favour the praying Indians and the christian religion, afterwards discovered quickly that he no had part or portion in that matter.

About this time several parties of English within Plymouth jurisdiction, were willing to have a hand in so good a matter as catching of Philip would be, who perceiving that he was now going down the wind, were willing to hasten his fall. Amongst others, a small party went out of Bridgewater, July 31st, upon a discovery, and by providence were directed to fall upon a company of Indians where Philip was; they came up with them and killed some of his particular friends: Philip himself was next to his uncle that was shot down, and had the soldier that had choice which to shoot at, known which had been the right bird, he might as well have taken him, as his uncle; but it is said that he had not long before cut off his hair, that he might not be known: The party that did this exploit were few in number, and therefore not being able to keep close in the rear, that cunning fox escaped away through bushes undiscerned in the rear of the English: That which was most remarkable in this design, was that trembling fear appeared to be upon the Indians at this time, insomuch that one of them having a gun in his hand well loaded, yet was not able to fire it off, but suffered an English soldier to come close up to his breast, and so shot him down, the other not being able to make any resistance; nor were any of the English hurt at that time.

The like terror was seen in others at that time; for within two days after, Capt. Church, the terror of the Indians in Plymouth colony, marching in pursuit of Philip with about 30 Englishmen and 20 reconciled Indians, took 23 of the enemy, and the next day following them by their tracks, fell upon their head-quarters, and killed and took about 130 of them; losing only one man. In this engagement God did appear in a more than ordinary manner to fight for the English, for the Indians by their number, and other advantages of the place were so conveniently provided, that they might have made the first shot at the English and done them much damage, but one of their own countrymen in Capt. Church's company espying them, called aloud unto them in their own language, telling them that if they shot a gun they were all dead men; with which they were so amazed, that they durst not once offer to fire at the English, which made the victory the more remarkable. Philip made a very narrow escape at that time, being forced to leave his treasures, his beloved wife, and only son to the mercy of the English. Skin for skin, all that a man hath will he give for his life. His ruin being thus gradually carried on, his misery was not prevented but augmented thereby; being himself acquainted with the sense and experimental feeling of the captivity of his children, loss of friends, slaughter of his subjects bereavement of all family relations, and being stripped of all outward comforts, before his own life should be taken away.—Such a sentence passed upon Cain, made him cry out, that his punishment was greater than he could bear. This bloody wretch hath one week more to live an object of pity, but a spectacle of divine vengeance, his own followers beginning now to plot against his life, that they might make the better terms for their own; as they did also seek to betray squaw Sachem of Pocasset, Philip's near kinswoman and confederate. For,

August 6th, an Indian willing to shift for himself, fled to Taunton, offering to lead any of the English that would follow him, to a party of Indians, which they might easily apprehend, which 20 persons attempted and accordingly seized the whole company, 26 in number, all but the squaw Sachem herself, who intending to make an escape from the danger, attempted to get over the river, or arm of the sea near by, upon a raft or some pieces of broken wood; but whether tired and spent with swimming or starved with cold and hunger, she was stark naked in Metapoiset, not far from the

water side, which made some think she was first half drowned, and so ended her wretched life just in that place where the year before she had helped Philip to make his escape; her head being cut off and set upon a pole in Taunton, was known by some Indians then prisoners, which set them into a horrible lamentation; but such was the righteous hand of God in bringing at last that mischief upon themselves, which they had wihout cause long acted against others.

Philip, like a savage wild beast, having been hunted by the English forces through the woods above an hundred miles backward and forward, at last was driven to his own den upon Mount Hope, where he retired with a few of his best friends into a swamp, which proved but a prison to keep him fast till the messenger of death came by divine permission to execute vengeance upon him, which was thus accomplished.

Such had been his inveterate malice and wickedness against the English, that despairing of mercy from them, he could not bear that any thing should be suggested to him about a peace, insomuch that he caused one of his confederates to be killed for propounding an expedient of peace; which so provoked some of his company, not altogether so desperate as himself, that one of them fled to Rhode-Island, whither the brave Captain Church was newly retired to recruit his for a little time, being much tired with marches all that week, informing them that Philip was fled to a swamp swamp in Mount Hope, whither he would undertake to lead them that would pursue him. This was welcome news, and the best cordial for such martial spirits; whereupon he immediately, with a small company of men, part English and part Indian, began another march which shall prove fatal to Philip, and end that controversy between the English and him: For coming very early to the side of the swamp, his soldiers began to surround it, and (whether the devil appeared to him in a dream that night as he did unto Saul, foreboding his tragical end, it matters not) as he was endeavoring to make his escape out of a swamp, he was shot through the heart by an Indian of his own nation, as it is said, that had all this while preserved a neutrality until this time, but now had the casting vote in his power, by which he determined the quarrel that had been so long in suspense. In him is fulfilled what was said in the prophet, Wo to thee that spoilest and thou was not spoiled, and dealest treacherously, and they dealt not treacherously with thee; when thou shall cease to spoil thou shalt be spoiled, and when thou shalt make an end to deal treacherously, they shall deal treacherously, with thee.

With Philip at this time fell five of his trustiest followers, of whom one was said to be the son of his chief captain, that had shot the first gun at the English the year before. This was done the 12th day of August, 1676, a remarkable testimony of divine favour to the colony of Plymouth, who had for the former success, appointed the 17th day of August following, to be kept as a day of solemn Thanksgiving to Almighty God. There having been so strange a turn of Providence observed in the late successes obtained in and about Plymouth colony, it may not be amiss here to enquire into the progress and continuance thereof after the slaughter of Philip that grand rebel.

In the preceding narration mention hath been made of one Capt. Church, whom God hath made an instrument of signal victories over the Indians in that colony, and of great advantage in that respect to that whole jurisdiction. It happened that the said Capt. Church some time in June, of this present year 1676, passing over in a canoe from Pocasset to Rhode-Island, as he used frequently to do, (having had much employment upon the said neck of land so called) several Indians whom he had known before at Lackenham, a village near Plymouth, beckoned to him as if they had a mind to speak with him; he having had so much experience as well as others of their treachery, was not willing to adventure too hastily to come near them; but when they seemed to urge very much, and made signs to him, and at last laid down their guns in his sight, he began to think with himself there might be something in the matter more than ordinary, therefore he resolved to go a little nearer to the shore, and then he perceived they had a great mind to speak with him, using much importunity for that end, insomuch that he ventured to go ashore amongst them, having but one Englishman and two Indians with him; he directed them to keep off the canoe while he discoursed with the Indians on shore. As soon as he came among them, they told him they were weary of fighting, and that they had fought so long by Philip's instigation; but they could not tell for what end, and therefore resolved they would fight no longer, and all they desired of him was, that he would make way for them to the governor, that they might live quietly amongst the English as they had done before, and that they would deliver up their arms, or would go out with them if he pleased to accept of them, and fight for him; to that end they desired a time to parley with him further about that business at what time and place he would appoint: He told them he would meet them two days after at Seaconet, a place up higher on the said neck, about 12 o'clock; accordingly he came to the said place, found the same Indians with some others, and their Snake squaw, or chief woman of that plantation, there ready to meet him.

After they had fallen into discourse about the beginning of the war, as well as the success and mischief of it, they would have put the blame off from themselves, and laid it upon the English: But he presently convinced them by an undeniable evidence, that they first began the war: For, said he, upon this Pocas set July 7th, 1675, you first fought with some of Rhode-Island, whereof one was my own servant, whose leg you broke, and the same day you shot at myself and company, before we meddled with you. They were so fully convinced herewith, that they found nothing to reply, but fell into other discourse about a peace which they were very desirous to obtain upon any equal terms, as was said before. There were about fifteen of the Indians present, besides their Snake squaw (which is with us their governess or lady) in conclusion they engaged forever after to leave Philip, and to go out with him; which they did forthwith, as soon as he had obtained a peace for them with the governor.

It is here to be observed, that these were not properly Philip's Indians, but belonged to the Seaconet squaw, who was nearly related to Philip, and her subjects had hiherto fought in Philip's quarrel till they saw nothing but misery and michief like to be the issue of it to themselves, as well as their neighbours. About 20 or 30 of these Seaconet Indians have constantly gone out with Capt. Church ever since, and not only been faithful and serviceable to him, but very successful in every enterprize they have gone about, nor hath he lost any of them in any skirmish with the other Indians: And it is said that this act of these Indians broke Philip's heart as soon as ever he understood it, so that he never rejoiced after, or had any success in any of his designs, but lost his men one time after another, till himself at last fell into the hands of those under Capt. Church's command: For at the swamp, when Philip was slain, Capt. Church appointed an Englishman and an Indian to stand at such a place of the swamp, where it happened Philip was breaking away; the morning being wet and rainy, the Englishman's gun would not fire; the Indian having an old musket with a large touch-hole, it took the more readily, with which Philip was dispatched, the bullet passing directly through his heart, where Joab thrust his darts into rebellious Absalom.

Thus did divine vengeance retaliate on this notorious traitor, that had against his league and covenant risen up against the government of Plymouth, to raise up against him one of his own people, or one that was in league with him, as he was with the English: The Indian that did this execution was called Alderman of Seaconet, that had never done any act of hostility against the English. By these passages it is manifest, that as the hearts of all are in the hand of God, so he turns them as he pleases, either to favour his people, or to hate and deal subtly with his servants, as seems good to him. Since this engagement with the Seaconet Indians (to leave Philip, and to go with Capt. Church) it is credibly affirmed, that such hath been their success that since June aforesaid, to the end of October following, there have been 700 Indians subdued, either by killing or taking captive by means of Capt. Church and his company, (part Indians and English) besides 300 that have come in voluntarily to submit themselves to the government of Plymouth. It appears thus by the sequel of things, that after the Lord had accomplished his work upon his people, that he is beginning to call his enemies to an account, and punish them for the pride of their hearts, and for all their treachery and cruelty against his servants. Philip's captains have run the same fate with himself, some before and some since his own fall.

In June last one Tiashq, a great Captain of his, his wife and child, or children being taken though he escaped himself at first, yet came since and surrendered himself. The next noted captain of Philip's Indians that was brought in after Philip's death, was called Tespiquin, a notorious villain, next to Philip, he was called the black sachem's son; It was this Tespiquin that burnt so many houses in Plymouth lately. Capt. Church with his company were in pursuit of him in September last, two days before they could get near him; at the last, on the third day, they found the track made by the English orchards: This was something of a blind track, therefore they were forced to take up their quarters that night without discovering any place of their ren-

dezvous. The next morning about 9 o'clock they came to their first rendezvous, from which they were just gone: At 1 o' clock they came to the second, and missing them there, they soon after came to the third track, wherein, after they had marched a while, they perceived they grew very near them, by the crying of a child which they heard: The place was near Lackenham upon Pocasset neck, so full of bushes that a man could not see a rod before him: Capt. Church ordered his men to march up together in one rank, because he discovered the Indians were laid in one range by several fires, so that by that time they all came up into an even rank very near together, within a few yards of them as he had appointed; they all suddenly rushed together upon them, and catched hold of them, not suffering any to escape, there being about 50 of them in all: Tespiquin's wife and children were there, but he was absent, as also one Jacob, and a girl that belonged to that company. The captain's haste would not admit of his tarrying till they came in, (though the Indians said they might come that night) wherefore he thought upon this project, to leave two old squaws upon the place with victuals, and bid them tell Tespiquin that he should be his captain over his Indians if he was found to be so stout a man as they reported him to be; for the Indians had said that Tespiquin could not be pierced by a bullet, for, said they, he was shot twice but the bullets glanced by him and could not hurt him. Thus the captain marched away with his booty, leaving this trap behind him to take the rest: The next morning he came to see what his trap had catched, there he found Jacob aforesaid (a notorious wretch) and the girl he missed, before, but not Tespiquin: But within a day or two after the said Tespiquin upon the hopes of being made captain under Capt. Church, came after some of the company, and submitted himself in the captain's absence, and was sent to Plymouth, but upon trial (which was the condition on which his being promised a captain's commission under Capt. Church did depend) he was found penetrable by the English guns, for he fell down at the first shot and thereby received the just reward of his former wickedness. About a fortnight after the surprising of Tespiquin, was one Totoson's company taken, wherein were above 50 persons; but Totoson escaped, and is still out in rebellion, unless vengeance hath overtaken him.

The next that was seized was one Annawan, a very subtle, politic fellow, and one of Philip's chief counsellors; he had about twelve men, and as many women and children in his company, who were discovered by their shooting at the English horses, and cattle; some of whom being taken made know the rest. Church at that time had but five Englishmen and twenty Indians. The place where this Annawan had betaken, was a ledge of rocks inaccessible but at one place, which by a few hands might easily have been defended against a great number of assailants: But Capt. Church by direction got up to their wigwams before they were aware of it; and presently told Annawan that he came to sup with him; whereupon Annawan (who had fallen flat upon the earth, expecting to have his head cut off) looked up and cried *taubut*, in their language, thank you, as one being much affected with the generosity of our English captain; they found some of the English beef boiling in the kettle: After supper he had much discourse with the said Annawan, and they lay down to sleep together in the wigwam; Capt. Church laying one of his legs upon Annawan and the other upon his son, that he might have notice if any of them should offer to stir: After midnight Annawan rose up, and Capt. Church was presently awake, and intended to watch after his prisoner: He thought at first he might have gone forth upon some necessary occasion; but not long after he returned again, having fetched out of the swamp hard by, two horns of powder, and a large belt of peag, supposed to be Philp's belt, all which he delivered to Capt. Church, in a way of thankful acknowledgment of his courtesy. Amongst other discourses that passed betwen them concerning the occasion of the war, carrying it on, the Indian would fain have excused Philip, and laid the blame upon the praying Indians (as they are distinguished from others by that character) and others of the youngest sort of his followers, who coming with their several tales (which he likened to sticks laid on a heap) till by a multitude of them a great fire came to be kindled: They make much use of parabolical expressions: for so said Solomon, where no wood is there the fire goeth out; so where there is no tale-bearers, there the strife ceaseth, Prov. 26, 20. But Philip had had large and long experience of the gentleness and kindness of the English both to himself and to his people, so that unless he hadborne an evil and malicious mind against the English, he would never have hearkened to those stories, contrary to his faithful promises of allegiance.

The said Annawan confessed also that he did believe by all those late occurrences that there was a great God that overruled all; and that he had found that whatever he had done to any of those, whether Indians or English, the same was brought upon himself in after time. He confessed also that he had put to death several of the English which they had taken alive, ten in one day, and could not deny but that some of them had been tortured, and now he could not but see the justice of the great God upon himself, with many other things of a like nature. But whatever his confessions of this nature were, being forced from him by the power of conscience, after he was delivered up to authority, he was put to death, as he justly had deserved.

It is said that Philip when he first began his rebellion, had about 300 fighting men under him, besides those that belonged to his kinswoman, Wetamoe drowned about Taunton, that had almost as many under her; and one Quenoquin, a Narraganset sachem that lived near him, and joined with him in his quarrel with the English: But it is certain that there are scarce any that are now left, that belonged to either of them: So although the Almighty hath made use of them to be a scourge to his people, he hath now turned his hand against them to utter destruction and extirpation from off the face of the earth, peradventure to make room for others of his people to come in his stead.

As for the rest of the Narragansets that joined in Philip's quarrel, it is already declared what end they were come unto. As for the rest of the Indians, whether Nipnet, Nashaway, Pacomptuck, Hadley, or Springfield Indians, it is not so certain what has become of them; but after their separation one from the other about July last, it was observed by all the tracks in those woods they went still westward; and about the middle of August last, a great party of them were observed to pass by Westfield, a small town to the west of Springfield, and were judged to be about 200; News thereof being brought to Major Talcot, he with soldiers of Connecticut colony under his command, both Indians and English, pursued after them as far as Ausotunnoog river (in the middle way betwixt Westfield and the Dutch river, and Fort Albany) where he overtook them, and fought with them;* killing and taking 45 prisoners, 25 of whom were fighting men, without the loss of any one of his company save a Mohegin Indian: Many of the rest were badly wounded, as appeared by the bushes being much besmeared with blood, as was observed by those that followed them further.

It is written since from Albany, that there were sundry lost besides the 45 aforementioned, to the number of three score in all; and also that an hundred and twenty of them are since dead of sickness; so that vengeance seems to be pursuing of them as well as the rest. Several of their friends that belonged to Nashaway, and the places adjoining, repaired to Piscataqua, hoping to shroud themselves under the wings of some honester Indians about Quechecho, under pretence of a declaration sent out by the governor and Council of Massachusetts in the beginning of July last: But some of our forces under Capt. Hathorne and Capt. Sill, with the help of Major Walden, Capt. Frost, and others residing in those parts being in readiness, separated the vile and wicked from the rest, and sent them down to the governor at Boston, where 8 or 9 of the ringleaders, such as one eyed John, Sagamore Sam, of Nashaway, chief actors of the late outrages and bloody mischief, had justice done upon them soon after. As for the massacres and calamities that befel the English further eastward, they shall in the second part of this narrative be declared.

The Indians being thus dispersed several ways, were strangely confounded and destroyed one parcel after a nother, until there was none left in the western or southern parts that durst make any opposition all the following part of the year. As for those that fled westward toward Albany, we shall there leave them for the present, wishing, we may never hear any more of them: A person of quality informs, that at Hartford in September last, he was present at the examination of one Choos, an Indian, formely of Connecticut, but of the Narraganset for the last winter, who confessed that he was one of that company of Indians that went westward the month before, toward Hudson's river; but after the fight at Ausotunnoog, he returned back to Connecticut for fear of the Mohawks; and that he lay hid about Farmington, till he was almost starved, and then he went to the seaside to make use of the oyster bank at Stratford for his relief, where he was espied by the Indians, and so brought to Hartford.

He affirmed that there were about 250 fighting men amongst those Indians that fled westward, besides women and children; and that

* [This battle was probably fought in Stockbidge, near where the meeting house now stands.]

near 200 of them passed the great river below Albany, and were sheltered by the Indians of that place, called Moheganders; but about 80 of them tarried on the hither side of that river, near a Dutch village (but he being convicted of fighting against the English, was condemned to die, and executed) about the Narraganset country the last fall, hoping to shelter themselves under Uncas, but he not willing to give them countenance against the mind of his friends at Connecticut, hath since abandoned them to shift for themselves, who have been most of them taken and brought in prisoners to the English this winter.

About the month of October last, Mr. Stanton chanced to come from Seaconet with 3 Indians in his company, Pequods or Mohegins, they hearing by a captive at one of the next towns, that there was a number of the enemy not far off, presently left Mr. Stanton and pursued after them, whom they soon after overtook, and made them all prisoners: Amongst them was an old man, not able to go their pace but promising to come after them, they spared his life: But as soon as the men returned at night from hunting, the old man told what had befel their women and children, whereupon the next morning they presently following after them, overtook them, and so recovered the prisoners, and slew one of the three that carried them away; the other two hardly escaped; one of them is called Major Symon, being part a Pequod and part a Narraganset, but of extraordinary strength and courage; he perceiving the danger they were in, challenged to fight hand to hand with any five of them with their hatchets: but they unwilling to hang their success upon the hazard of a single combat, came all towards him at once, whereupon first discharging his gun amongst the whole company, he broke through them all by force, and so escaped their hands, with one of his companions. This Symon hath been very active in killing and taking many of the enemy; some say that he with his own hands hath taken and killed above threescore, and either out of hatred to the enemy, or love to the English, is this last week gone with the soldiers to the eastward, in pursuit of our quarrel against them in those parts.

At another time not long before, when he was out against the enemy, he came suddenly upon a great number of them as they were spread under a steep bank, from whence leaping down into the midst of them he killed some and took others. Fighting it seems is a recreation to him, for he is seldom at home above four or five days together. Some say that in one of his former expeditions, being much wearied and spent he laid himself down to sleep, but towards morning he fell into a dream, wherein he apprehended the Indians were upon him, when suddenly rising up he espied the Indians coming toward him, but suddenly presenting his guns against them he so frightened them, that they gave him an opportunity to make an escape from a multitude of them.

Since the beginning of December last, news coming down to Boston that mischief was done about Seaconk and Rehoboth, by some remaining Indians thereabouts, killing their swine and horses, several persons of Medfield went out after them, and pursuing them by their tracks, came upon a small party, of whom they took three, one of which escaped while some of the company were going after the rest. Those that were taken confessed there was about 60 that were lurking up and down in those woods. The said two Indians were brought into Boston the 8th of January.

A commission was formerly granted to Peter Ephraim, an Indian of Natick, to go out in pursuit of them, with 29 of his company; a few of the English from Medfield went with him, who being soon tired with marching in the snow, returned. The Indians kept on in their design, and came across a considerable party of the enemy having traced them till they found where they lodged over night; they surrounded them early in the morning, as their manner is, and then offered them quarter if they would yield; eight resolute fellows refused who were instantly shot, the rest were all seized, the whole number was 42. This was done about the middle of January, since which several such exploits have been done by them. January 23d, the same company of Indians took 22 of the enemy, among whom were five able men, and five arms; they sent the prisoners home by five of their company, the rest went further in the chace.

January 26th, another parcel of the enemy were brought in, eight in number, of whom five were men, amongst whom was the Indian called Cornelius, who three years since was indicted for killing an Englishman's cow; upon which he was said to have uttered several threatning speeches, that he would kill Englishmen and their cows too; which was now remembered against him when he was in particular called to account or having a hand in killing some of the English and Indians also in league with us, for which he was sentenced to die, and was accordingly executed the 16th of February following.

Concerning the rest of the Indians either in the colony of Plymouth, Connecticut, or Massachusetts, there is no occurrence more of moment come to light since the end of August last, save what is last mentioned before; yet it is very remarkable, that although terms of peace were offered to all that would come in and surrender themseves (as appears by a declaration put out in July last) and that a Nipnet Sachem called John, did thereupon with a number of his company come in and offer themselves, and were accordingly secured of their lives and other concernments; yet did that treacherous villain make an escape this winter from Capt. Prentice's house (under whose charge he was put, about Cambridge village) and with about 20 more fled away into the woods to shift for himself amongst the rest of his bloody companions; they were soon after pursued, but had gone too fast and too far to be overtaken. Whether it were consciousness of their own guilt, that had a hand in the blood of the English, or whether not liking their manners so well as to be confined thereunto; wild creatures ordinarily love the liberty of the woods better than the restraint of a cage. They made none acquainted with their design before they went away, and as yet little account can be given of them, only it is known that one or two of their families are entertained by Uncas, but what is become of the rest is uncertain, there were but seven of the company men, so they are not capable of doing any mischief. Some of late have travelled through the woods to Connecticut, but have met with no Indians, nor did they hear of any in their passing between this place and that.

And because in the present narrative there hath been frequent mention made of Uncas, the Mohegin sachem, and of his faithfulness to the interest of the English, I add in this place, that it is suspected by them that knew him best, that in his heart he is no better affected to the English or their religion, than the rest of his countrymen, and that it hath been his own advantage that hath led him to be thus true to them who have upheld him as formerly against the Pequods, so of late against the Narragansets; yet hath he not long since been convinced of the truth of our religion, and vanity of his own, as himself hath solemnly confessed; which will evidently appear by the passage that follows, which I shall here represent just as it was from under the hand of that evrend person it relates unto, namely, Mr. Fitch, pastor of the church of Norwich, near unto Uncas's place. There was a great drought the last summer; but as it seems, it was more extreme in those parts than with us about Massachusetts; and although probably the English might have prayed for rain themselves without any motion from the Indians, yet their address to the said Mr. Fitch on such an account, with the consequences thereof, is very remarkable, which take in his own words:

"Concerning the drought, &c. true narrative of that providence is this: In August last such was the want of rain, that the Indian corn was not only dried and parched up, but the apple-trees withered, the fruit and leaves fell off as in autumn, and some trees seeming to be dead with that drought; the Indians came into town and lamented their want of rain, and that their powaws could get none in their way of worship, desiring me that I would seek to God for rain: I appointed a fast day for the purpose; the day being come it proved clear without any clouds until sunsetting when we came from the meeting, and then some clouds arose; the next day remained cloudy; then Uncas with many Indians came to my house, Uncas lamented there was such a want of rain: I asked whether if God should send us rain he would not attribute it to their powaws; he answered no, for they had done their utmost and all in vain; I replied, if you will declare it before all these Indians you shall see what God will do for us, for although this year he hath shewn his anger against the English and not only against the Indians, yet hath begun to save us, and I have found by experience twice in the like case, when we sought by fasting and prayer he hath given us rain, and never denied us. Then Uncas made a great speech to the Indians (which were many) confessing that if God should then send rain, it could not be ascribed to their powawing, but must be acknowledged to be an answer to our prayers. This day they spread more and more, and the next day there was such plenty of rain that our river rose more than two feet in height."

By all recorded in the foregoing narrative, there are none into whose hands it shall come, but will be sensible that the present time hath been a day of great rebuke and trouble to the poor people sojourning in this wilderness, upon whom sundry calamities have broke in at once, this last as well as to the former years: In many places they have been visited with sickness and mortality, more than in many years before, depriving them of many useful persons; amongst others the loss of

Mr. John Winthrop, the late worthy governor of the colony of Connecticut, is as it ought to be, much lamented by all, who died at Boston, the 5th of April, 1676, in the 73d year of his age, whither he was occasionally called the last winter, to sit with the rest of the commissioners of the united colonies to consult about the great affairs of them, now newly engaged in these troubles from the heathen. He was the eldest son of the famous governor of the Massachusetts, deceased March 26, 1649, *Proles similima parentii.* The memory of the father, though he died so long time ago, yet still lives in the minds of the surviving generation, and is like to continue much longer by the remembrance of the many eminent virtues found in this the eldest of his offspring, who being not long after, or about that time called to take up his residence in that colony, was by the importunity of the people there, prevailed with to accept of the governor's place, which for a long time after he sustained in that colony, though annually chosen thereunto; being so well furnished with many excellent endowments, as well moral as political and philosophical, which rendered him most fit to to be an healer of that people. Though we are dealing in another subject, yet shall not we pass by his tomb as we go along, without paying the homage due to the memory of so honorable a gentleman.

After all the forementioned calamities and troubles, it pleased God to alarm the town of Boston, and in that the whole country, by a sad fire accidentally kindled by the carelessness of an apprentice that set up too late over night, as was conceived; which began an hour before day, continuing three or four days, in which time it burned to the ground forty-six dwelling houses, besides other buildings, together with a large meeting house. Some mercy was observed mixed with the judgment for if a great rain had not continued all the time (the roofs and walls of the ordinary buildings consisting of such combustible matter) that whole end of the town had at that time been consumed. Whereby we see that God in his providence can turn our dwellings into ashes, without the help of either foreign or domestic enemies. Which consideration may awaken all from security and confidence in these uncertain and unstable possessions, that have no firmer foundation that may so soon after their first erection eaten up by the flames of the fire, before the iron teeth of time have had leisure to devour and feed upon them.

God grant that by the fire of all these judgments, we may be purged from our dross and become a more refined people, as vessels fitted for our master's use.

CHAPTER II.

A NARRATIVE OF THE INDIAN WARS IN NEW-ENGLAND, FROM PISCATAQUA TO PEMMAQUID.

THE occasion, rise and progress of the war with the Indians in the southern and western parts of New-England, together with the issue and success thereof, hath in the former part of this narrative been already declared. Before an entrance be made into a relation of those troubles that befel the eastern and northern parts, it will be requisite to give some general description of the place, as being less frequented, and so more unknown than the other, like heralds that used to blazon the field before they meddled with the charge, as an historian once said, that so the reader may not miss the truth in a story, by being unacquainted with the places connected with the discourse. Briefly therefore, that more cost and pains be not spent in the surveying a barren and rocky country, than will quit cost (the list or border here being known to be worth more than the whole cloth) that whole tract of land being of little worth, unless it were for the borders thereof upon the sea-coast, and some spots and skirts of more desirable land upon the banks of some rivers, how much soever it be valued by them that know nothing thereof, by the uncertain and fallible reports of such as only sailed by the country or viewed some of the rivers and havens, but never passed through the heart of the continent. The whole being worth scarce those means that have been lost these two last years in hopes to save it.

This north part of New England, did first, like Zarah put forth his hand, thereby inviting the adventurers to twist the scarlet thread of their hopes about the same auspicious beginning they were ready to promise themselves prosperity in having that advantage before others to plant and people that part of the country. But that fair opportunity was almost quite lost by some fatal and mischievous accidents happening soon after that noble enterprise was first set on foot, as hath been already in part and may hereafter be more fully declared.

The first place that ever was possessed by the English, in hopes of making a plantation in those parts was a tract of land on the west side of the river Kennebeck, then called Sagatawock, since Sagadanock. Other places adjoining were soon after seized and improved for trading and fishing. The more remote and farthest northward at this time belonging to the English (Penobscot forty years since being surprised by the French, and by them held to this day) is called Pemmaquid, distant seven or eight leagues from Kennebeck and is the utmost boundary of New England, being about forty leagues distant from the mouth of Piscataqua river; Pemmaquid is a commodious haven for ships, and hath been found very advantageous to such as used to come upon these coasts to make fishing voyages; south west or south east from thence about six or seven leagues, lies an island called Monhiggon, of much use on the same account for fishing, it lying three or four leagues into the sea from Damarils's cove, a place of like advantage for stages of fishermen in former times. There have been for a long time seven or eight considerable dwellings about Pemmaquid which are well accommodated with pasture land about the haven for feeding cattle, and some fields also for tillage; all the land improvable for such uses being already taken up by such a number of inhabitants as is already mentioned.

In the mouth of the river Kennebeck lies a considerable island called Arowsick, some years since purchased by Major Clarke and Capt. Lake, two merchants of Boston, on which they built several large dwellings, with a ware-house and many other edifices near the water side, it being intended by the owners for a place of trading as well as planting; there being many of late seated there fit to carry on such design; where also was built a fort which if it had been carefully defended, might have proved the defence and security of all that side of the country, as it used to be their magazine. Up higher beyond the river Kennebeck, four leagues eastward towards Pemmaquid, is another considerable river called Sheepscot, upon the banks of which were many scattered planters, who lately flying from their dwellings for fear of Indians, left as was judged, a thousand head of neat cattle for the use of the Indians that made the late insurrection against the inhabitants of those parts, besides their fields and barns full of corn. There is a another river that issues into Kennebeck a little higher up in the country, called Pegypscot, that comes down from behind Casco bay. This Pegypscot is the seat of the Amoscoggin Indians, who have had a great, if not a principal hand in the late mischief.

Some few leagues to the south of Kennebeck lies the famous and spacious haven called Casco bay, the northeast cape of which is made by an Island called Saguin; the southern and opposite point of land is called cape Elizabeth. Within the bosom of this bay, being about eight or nine leagues over at the mouth of it, are a great number of small islands, many of them being inhabited by fishermen and others; one of the principal of those is called Jewel's island. There are many places about the bay fit to make commodious habitations, and on the south side of it is a small village called Falmouth; all or most of it lately destroyed by the Indians.

Not far from Casco, to the southward or south west still is a river called Spurwick, over against which lies Richmond island, not far from the main land, being divided therefrom by a small channel, fordable at low water; it hath for a long time been the seat of Mr. Jordan, in right of Mr. Winter, the former if not the first proprietor thereof, whose daughter he married.

The next plantation southward is called Scarborough, a small village seated upon Black point, over against which is another point, for distinction from the former, called Blue point. This Black point was lately the seat of Mr. Josselin, being a parcel of the province of Maine, on falling within the precinct thereof, and formerly by patent granted to the said Josselin or his predecessors, since purchased by Mr. Scotto, of Boston.

Saco river lies next in order to the Piscataqua, a navigable river, where Major Philips had a commodious situation lately; at the mouth of which river lies Winter harbour, encompassed on one side by a neck of land, formely the property of one Mr. Winter, whose name it still retains, but lately purchased by Major Pendleton, where he enjoyed a very comfortable seat and habitation.

There is another harbour lying a little southward of Saco, made by that which is called cape Porpoise; a convenient seat for fisherman, as are most of the other places abovenamed. Between cape Porpoise and Piscataquay there are but two small towns more, (though ambitious of great names) the one called Wells and the other York. Wells is seated upon a small river or creek, affording a small harbour fit only for barks and smaller vessels; on each side of which town lies a small river, the one is called Kennebunk, the

other Maguncuck. The other town, York, formely known by the name of Agmenticus, from a high hill of that name not far therefrom. The point of land which lies between the said towns, is called cape Nadduck, making a small harbour likewise, into which issues another pretty river on the banks of which is situate the town of York. All or most of the forementioned towns and plantations are seated upon and near some greater or less river whose streams are principally improved for driving of saw mills, those late inventions so useful for the destruction of wood and timber, especially of fir trees which do so abound in those coasts, that there is scarce a river or creek in those parts that hath not some of those engines erected upon them.

The upper branches of the famous river of Piscataqua being also employed all of them that way, namely, Sturgeon creek, Salmon falls, Newechewannick, Quecheco, Oyster river, Swamscot, Greenland, Lamprey Eel river, together with the towns of Esther and Dover, seated upon or near some of the main branches thereof, whose principal trade is in deal boards cut by those saw mills, since their rift timber is near all consumed. On each side of that fine navigable river of Piscataqua, down towards the mouth of it are seated on the north side, the town of Kittery, (a long scattering plantation made up of several hamlets) on the south side of the town of Portsmouth, to which belongs the great island lying in the mouth of the said river, a place of considerable trade of late years, which together with Strawberry bank, the upper part of the said town of Portsmouth, are the magazine and chief or only place of trade and commerce for all the plantations betwixt it and the Casco bay. All the said plantations have in these two last years 1675 and 1676, felt more or less of the barbarous and perfidious Indians belonging to that side of the country, as shall more particularly be declared in what follows, after a short discourse of the first planting of the country, which may serve as a kind of prologue to the following tragedy.

This part of New England began first to be planted about the same time with Virginia, viz. in the year 1606. There the first letter patent granted by the king, for the limitation of Virginia, did extend from 34 to 44 degrees of north latitude, and was divided into two parts, namely the first and the second colony; the former was appropiated to the city of London, the other to the cities of Bristol, Exeter and the town of Plymouth, each of which had laws, privileges, and authority for the government, and advancing their several plantations alike as saith Capt. Smith in his history of Virginia and New England. This second colony of New England, promising but little advantage to the undertakers, by reason of its mountainous and rocky situation, found but few adventurers forward to promote the planting thereof after the death of Sir John Popham, who was the first that ever procured men or means to possess it; for when the main pillars are removed, what can be suspected but that the whole building should fall to the ground. Yet notwithstanding the discouragements the first planters met with in their first winter seasoning in that cold and rocky desert (which made them all return home in the year 1608) Sir Francis Popham his son, having the ships and provisions which remained of the company, and supplying what was necessary for his purpose, sent divers times to the coast for trade and fishing, of whose loss or gain, as saith my author, himself was best able to give an account; and some of the ships sent by him, and the Earl of Southhampton, with other noble adventurers, did bring home some of the natives of the place in one of the following years, by whose information some of the first undertakers were encouraged once more to try the verity of their hopes, and see if possibly they might find something that could induce a fresh resolution to prosecute so pious and honorable a work.

But in the mean time before there was yet any speech or endeavour to settle any other plantations in those parts, that about Sagadahock being thus abandoned for the present, by the first undertakers, the Frenchmen immediately took the opportunity to settle themselves within our limits, being understood by those of Virginia, they discreetly taking into their consideration the inconveniences that might arise by suffering them to harbor there, Sir Samuel Argal was sent with a commission to displace them which he with great discretion, dexterity, and judgment, performed about the year 1613, which made way for the plantation at Nova-Scotia, granted afterwards by King James to Sir William Alexander, one of his majesty's most honorable council of Scotland. The said Argal seized the forts which the Frenchmen had built at Mount Mansel, St. Croix and Port Real, and carried away their ordnance and provisions to the colony of Virginia, to their great benefit. The said places were held by the English many years after, till about the year 1695 by commission from the Scotch lord aforesaid; but how his right came afterwards to be alienated to any of the French nation, doth not concern us with reference to the business in hand, further to enquire.

Things remaining in this posture for the space of near seven years, some of the first adventurers apprehensive of better hopes of good that might ensue by a fresh attempt, resolved to set the design a foot a second time, to which end several ships were sent on that account in the year 1615, but with as bad success as the former; for in the year before, viz. 1614, Capt. Smith, desirous to promote the colony of New England, as well as that of Virginia, came thither with two vessels, and returned back to England in the least of them, with intent to be there again the next year to promote the said plantation; but after he was gone, one Thomas Hunt, master of the ship he left behind, like a dishonest man, to prevent the carrying on the plantation, that he and a few merchants might wholly enjoy the benefit of the trade of the country, after he had made his voyage, seized upon 24 of the poor innocent natives, that in confidence of his honesty, had put themselves into his hands, then clapping them under hatches, carried them away to Malaga, whither he was bound with the fish he had made upon the coast, for that market; but this vile act, although it deprived him forever after of any more employment in those parts, yet that was the least part of the mischief that attended this wicked practice; for upon the arrival of the adventurers ships the next year, two natives of the place that had been some years in England, and coming back unto the said ships, as soon as they understood the injury so treacherously done to their countrymen they contracted such a hatred against our whole nation, that although one of the said natives died soon after, yet the other called Epenow, studied how to be revenged, which he so far found means to effect that he frustrated this second attempt of settling a plantation in these parts.

Yet did not the adventurers cast off all hopes of carrying on their design. Wherein Providence within a few years so favoured them that one or more of the savages called Tisquantom and Samoset, carried away by Hunt, was brought back to Newfoundland, from whence he was soon after conveyed by the prudent endeavour of Capt. Mason (then governor of the plantation began upon Newfoundland) into the hands of some of the adventurers, by whose means they hoped to work a peace betwixt the said natives on that coast where the fire had been kindled before; for the adventurers employed Capt Thomas Darmer, a prudent and industrious gentleman, to settle the affair of the plantation now a third time revived again about Kentucky, about the year 1619. By his prudence and care a lasting peace was made betwixt the natives of the place and the English, who were but a little before so abhorred by them for the wrong formerly received, so that the plantation began at last to prosper, and continue in good liking, and assurances of the friendship of their neighbours that had been lately exasperated against them. This Tisquantum before mentioned, was most instrumental and helpful to the plantation begun at New Plymouth about the following years, 1620, in their weak beginnings, there being frequent mention of his name, as also of one Samoset, a native of the same place, by the like providence brought back to Kennebeck, and from thence with Tisquantum came to the new planters at Patuxet, or Plymouth, and brought them into acquaintance with Massasoit, the sachem about those parts, without whose friendship that new plantation would hardly have subsisted long.

This story premised, is the more to be observed in this place because the friendship upon the means and occasions aforesaid, confirmed between the Indians in these eastern parts and the English, had continued stedfast and constant to this year, when it was broken by another treacherous and wicked practice of a like nature, and parallel to that of the aforesaid Hunt, as may more fully be declared afterwards.

Possibly the like satisfaction may prove the more probable means to procure a settled peace. But to return whence this digression hath been made. Some years were spent to bring things to this issue: The adventurers were put to much care and pains before they could get their patent confirmed and renewed again: Many obstructions they met with from some interlopers who began to look into the trade of this country, and would irregularly have had a share therein, or grade it common to all traders, to which end they petitioned to a parliament then called to bring about their ends, but at the last it was settled firmly in the hands of sundry noble and worthy patentees, lords, knights, gentlemen, and merchants commonly known by the name of the council

of Plymouth, who had the absolute power under the king for making all grants, and disposing of all lands from the 40th to the 48th degrees north latitude; all which was accomplished about the year 1621. Some printed relations that speak of these transactions, write much of the flourishing state, and hopeful prosperity of this plantation, published about fifty years since, yet did it never appear by what followed, that any considerable advantage did ever accrue to the first undertakers, from this their new plantation of the eastern parts, unless by the trade of fish and firs, which latter continued not long; that managed it by their own particular flocks and personal endeavours; and if without offence it may be spoken, the multitude of patents soon after granted to gentlemen of broken fortunes, have provided but places of unhonorable exile or confinement, whither many deserving persons of better education than fortune, were sent to shift for themselves in a foreign land, without being further troublesome to those nearer home, on whom they had their hopes and dependance; yet it must not be denied but that some of the undertakers were at vast expence, casting their bread upon these waters, where none of their friends and relations have as yet had an opportunity to find it; The reason of which is not hard to give, in reference to all those lands and territories that lie to the eastward of Piscataqua river. One main cause had been the multiplicity of grants and patents for the dividing of the said tract of land for besides the strife that hath been occasioned by the intricacy and indistinctness of their liberties and bounds, (enough to have maintained a greater number of lawyers than ever were the inhabitants) if the grantees had been supplied with monies proportionable to their suits and controversies about their bounds and jurisdictions, which sometimes they have been ready to decide with their swords, witness those fatal names imposed on such accounts upon some places belonging to those parts, as Bloody Point, Black Point, Blue Point, and every considerable parcel of land being by patent granted to several particular persons hindered the erection of townships and villages, which if it had been otherwise disposed of, might have been full of towns, and well peopled, and thereby the inhabitants had been able to have stood upon their guard, and defended themselves against the common enemy, whereas now they were but like *scopoe disolutoe*, or like his arrows that being bound up in one bundle could not be broken by an ordinary force, but being loose, were easily snapped asunder by any single hand. Another reason might be, the employing of such agents and instruments as either wanted skill or fidelity to manage what they were entrusted with, which made many of the adventurers long ago complain, that instead of bills of exchange and other returns which they expected, they received nothing but large inventories of the wants of their several plantations, and the servants sent over to improve them, which were all the returns that many of them ever received for the large sums of money many disbursed for the carrying on their affairs. A third reason may be the several changes of government the inhabitants have passed under, which have occasioned not only much vexation and expence to such as were upon the place, but much discouragement to several others who by the commodiousness of the place would willingly have chosen stations in those parts, had they seen any hope of a settled government ever like to be obtained; which is not hard to demonstrate by giving a little touch as we pass along, on the several changes of government the places aforementioned have been moulded into, and the several proprietors that of late have claimed interest in the land. In the year 1624, a patent was granted by the council of Plymouth, thegrand proprietors,to Capt. Mason,for a large tract of land about Piscataqua, but it not being distinctly bounded, himself with Sir Ferdinando Gorges, obtained a joint patent in the year 1539, for the land betwixt the east of Sagadahock, and west of Namukeag, but that also interfering with the bounds granted before that time to sundry gentlemen merchants that had obtained a patent from the south of Charles river, to the northward of Merrimack, Capt. Mason's bounds were afterwards by consent (as is said) of his agent or agents, reduced to some branches about Piscataqua river (who yet could not agree with those that acted in the name of Shrewsbury men) but being wholly neglected by the pretended proprietor or his successor (till of late days) was by the desire of the inhabitants yielded up to the Massachusetts government near twenty years since.

In the year 1630 a patent was granted by said council of Plymouth (signed by the Earl of Warwick, and Sir Ferdinando Gorges, and sealed with the common seal of the council aforesaid) to John Dy, Thomas Lupe, Grace Harding, and John Roach, of London, for a large tract of land on the south side of Sagadahock, forty miles square by the sea-side, and so up into the country: John Dy, aforesaid, and his partners took in another as partner and associate with them, Mr. Richard Dummer,of Newbury, in England, in the year 1633, to whom they delivered the original patent, with an order from them, and in their name to take up the land described in the patent, but he being denied opportunity to effect it, as also a ship formerly sent by the patentees for that end, not accomplishing their desire, they not long after sold all their interest in the said patent, to one Mr. Rigby, a Lancashire gentleman, who made Mr, Cleaves his agent to manage the business of his purchased interest in the said patent: to whom Mr. Dummer was ordered to deliver the original patent, which accordingly he did: What trouble was occasioned soon after between the said Mr. Cleaves and Mr. Umes, agent for Sir Ferdinando Gorges, is well known to the inhabitants of the place and need not here be mentioned; nor yet how the said Mr. Rigby came forward to lose his interest, at least with the inhabitants in the patent.

In the year 1632, Sir Ferdinado Gorges not trusting in the joint patent for himself and Capt. Mason, obtained a distinct patent for himself and got confirmed by King Charles the first, of blessed memory, for all that large tract of land from Sagadahock to Piscataqua river, and so about an hundred miles up into the country, by the name of the Province of Maine. What benefit and improvement was ever made thereof by his agent or successors, is best known to themselves; but for the inhabitants, who upon one account or another had been induced, either by any precedaneous grant or liberty from himself or his agents, to take up any land within the bounds of the said province; they finding much inconveniencies and trouble for want of an orderly and settled government, did at the last, petition the general court of Massachusetts to be taken under their jurisdiction and government (reserving the liberties and privileges of their former purchases and grants, as to the title, possession, and property of themselves) which was granted them, though not only and altogether upon the grounds on which it was desired by the petitioners. Yet notwithstanding all this, things were not settled either to the comfort or content of the inhabitants: For sometimes some demanded right of jurisdiction over them, by virtue of Sir Ferdinando's patent, sometimes commissioners employed by his Highness the duke of York, attempted to settle a government amongst the people; sometimes they tried what might be done by agreement amongst themselves, but after their return for England, by one mean or other the government relapsed again into the hands of Massachusetts, although a supersedas thereunto seems to have been put by an order from his majesty this last year.

By the several vicissitudes and changes of government,the flourishing of the said province hath been much obstructed, which else might have been advanced, and the inhabitants been put into a capacity to have secured themselves against the late barbarous incursions of the Indians,might thereby have been prevented, and so the mischief also which hath ensued might thereby have been averted: For a well ordered goverment would never have suffered those that now were connived at, which if they had been timely looked into by such as had absolute or positive and unquestioned power of rule in their hands, would have been otherwise ordered, the present mischief that is come upon those places, might thereby have been, if not prevented, yet more easily redressed, than now it is like to be.

As for the tract of land that lies eastward beyond Kennebeck betwixt that and Pemmaquid, it is said to have belonged to one Mr. Aldworth and his successors, who was alderman of Bristol, and on that had a patent thereof, and employed some as his agents, that did sometimes reside upon the place, and was lately settled in some order or goverment by his highness the duke of York's commissioners, by whom also was an agreement made betwixt the sagamores of the Indians in those parts and the English, at a court kept by their appointment in Kennebeck which if it had been observed, might in all probability have prevented in great measure the quarrel which is now fallen out between the English and Indians: For upon some jealousies of the rising of those Indians about twelve or thirteen years since, it was agreed that if any mischief should happen to be done by the English or Indians one against another, though it were to the killing any person, neither side should right themselves, but complaint should be made to the sagamores if the Indians did the wrong and to the court if it was done by the English: both which did promise that satisfaction should be made for the preventing any quarrel: The names of the sachems, as likewise of them that were in power at the court, do still remain upon public record. But matters of government in those parts being since collapsed, no authority more than

was merely voluntary, and persuasive being owned, things are now brought to that miserable state which follows next to be declared.

Ever since the first settling of any English plantation in those parts about Kennebeck, for the space of about fifty years, the Indians always carried it fair, and held good correspondence with the English, until the news came of Philip's rebelling, and rising against the inhabitants of Plymouth colony in the end of June, 1675; after which time it was apprehended by such as had the examination of the Indians about Kennebeck, that there was a general surmise amongst them, that they should be required to assist the said Philip although they would not own that they were at all engaged in the quarrel. The like jealousies did appear in all the Indians that inhabited to the eastward of Piscataqua, which plainly show that there was a design of general rising of the Indians against the English all over the country (possibly as far as Virginia, the Indians there making insurrections the same year) and that many if not most of them were willing it should succeed, although the oldest and wisest of them, did not like it, fearing the issue as they had cause: But many of the young men about Casco bay, and Amoscoggin, were certainly known to flock thither the last year, and did sundry of them come short home: For herein they acted but like savages, as those of Virginia did but fifty years before, shewing themselves friendly and courteous to their new neighbours till they had opportunity to do them mischief. So that notwithstanding many of the inhabitants in the eastern, as in the western parts of the country, that were wont to trade with the Indians, were not willing to believe any such purpose among them, but were ready to think some of the ruder sort of the English, by their imprudent and irregular actions, have driven them into this rebellion; yet is it too evident that the said Indians (who naturally delight in bloody and deceitful actions) did lay hold of any opportunity that might serve as a pretence for their barbarous practices. Indians about Wammeset and Piscataqua, that had joined with their countrymen in their rising against the English the last winter, when they were pinched with hunger, in the cold winter following returned back to the English, and desired to make peace, and firmly engaged to continue their wonted friendship; yea, some of them, as if they were really sorry for the murders and cruelties, of their own voluntary motion came with the prisoners they had taken, and resigned them up to the English, yet when their own ends were answered and another opportunity was offered of doing further mischief of a like nature, they presently returned to their former practice, as is well known of Simon and Andrew, that had killed some, and led others captive the last spring from Bradford and Haverhill, who came in the end of June to Major Walden's, bringing home English prisoners with them, yet did the very same Indians within less than two months after join with Amoscoggin and Kennebeck Indians in committing the said tragedies that were last acted in those parts, yet was he and his partner suffered to escape for want of sufficient guarding the prison where they were put in order for further trial. But *sero sapriant phyrgee;* it is hoped that we shall after some few more experiences of this nature, learn to beware of this subtle brood and generation of vipers. Ever since enmity was put between the seed of the woman and the seed of the serpent, it hath been the portion of her seed in every generation, and in every nation to meet with the sad effects of that enmity; nor can they ever expect to find better dealing from any of the other sort, further than either of their power or hope of benefit by their favour may induce them to another disposition, as we the inhabitants of New England have found by their late and sad experience in reference to these pagans in the west whom amogst whom our lot is cast, they proving, is one says of the Mahometans in the east, like a nest of hornets, that if any one of them chance to be provoked they will be all about his ears that comes near them. But it is time to begin with the particulars of the tragedy itself, that the reader account not the prologue too long. It was on the 24th of June 1675, when the first mischief was done by the Indians about Mount Hope, before 20 days were over, the first fire began to kindle in these more remote and northerly bounds of the said country, or two hundred and fifty miles distance, and upon this occasion, the 11th of July, 1675, a letter was brought to Kennebeck from one Henry Sawyer, an inhabitant of York, signifying the news of the Indians rising about Plymouth, and that a course was taken to disarm them along the shore. This rumour did so far awaken the inhabitants, that the very next day, at a general meeting of the English, at one Capt. Pattishal's house, several offered themselves as volunteers to go up the said river of Kennebeck, to make discovery of the Indians fidelity, or else to fight them if there was occasion. The third day after marching up the river, to Quegebeck, they met with the inhabitants of Sheepscot river, which is a river lying about twelve or fourteen miles to the northeast of Kennebeck. Divers of the Indians thereabouts by the persuasion of one Mr. Walker, that used to trade with them, brought down an inconsiderable part of their ammunition, as a few guns, a little powder and shot, with a few knives. About 7 of the Kennebeck Indians, and five of those called Amoscoggin Indians, about Pegypscot (a river more southward towards Casco) made this pretence of bringing their arms, Capt. Lake, Capt. Pattishall, with Mr. Wiswal in whose hands was settled a kind of military power for those parts, were sent for further to examine the said Indians, of whom upon examination they saw reason to suspect some if not all; whereupon they sent messengers a second time to the Amoscoggin Indians, and also a letter to Mr. Walker, to send down their arms and ammunition to them for their greater security. After Mr. Wiswal was returned home, the 5 Amoscoggin Indians aforesaid, brought in their guns, but probably with no good intent; for an Indian called Sowen, having an axe in his hand, struck at one Hosea Hallet, a Frenchman, but was prevented from doing him mischief; however, the said Indian was presently bound and put up into a cellar. Some of the English that used to trade with those Indians were ready to excuse the Indian, saying he was drunk, or that he was a distracted fellow. Mr. Wiswal with the other two examinents, looked upon those as mere excuses, and altogether groundless, for one of them to this day affirms that he was as rational and sensible as any of the rest.

The ancient Indians being asked what they thought was meet to be done in the said case, said he was worthy to die for such an affront, yet they would be glad if his life might be spared, offering to be jointly bound in his behalf, to pay forty beaver skins at next fall voyage, giving their hands in token of their fidelity, and also leaving their arms in the hands of the English as a pledge of their faithful keeping those articles of peace concluded on betwixt them. If they proved themselves honest men they were to have their arms again, which was accordingly performed the last of June, 1676; they having in the mean time carried themselves peaceably towards the English. The day after, an Indian called Robin-Hood, with great applause of the rest, made a dance, and sang a song to declare their content in what was transacted; and so they parted, setting the Indians at liberty that had thus engaged for their friend Sowen, the Indian; but yet to this day not one skin of beaver was ever paid to the English, as was promised, the Indians all this while were well provided for victuals by Capt. Lake, with other supplies of rum and tobacco, even to the digusting of some English then present.

But the Indians left as hostages upon Sowen's account, however civilly they were treated, ran all away at the last, trusting more to the celerity of their own feet, than to the civility of their English friends, who after they were escaped, joined with a parcel of their fellows soon after, about 20 in all, in robbing the house of one Mr. Purchase, an ancient planter about Pegypscot river, and a known trader with the Indians, whatever wrong may be pretended by the said Indians, as done them in their trading, (of which more may be spoken afterwards) that will in nowise excuse their perfidious treachery and falsehood, in breaking covenant with the English, dissembling and seeking all advantatages of cruelty against their English neighbours, of which in the following winter and summer, 1676, there will be a more full and undeniable discovery. This was done in the beginning of September, 1675. Those Indians that first assaulted Mr. Purchase's house, did no other mischief than plundering it of strong liquor and ammunition, also killing a calf or two, with a few sheep, but no more than what they ate, and spoiling a feather bed by ripping it open to turn out the feathers, contenting themselves with the case, which they might more easily carry away. They offered no incivility to the mistress of the house (her husband and sons being at that time from home) yet one of her sons approaching near the house and finding it possessed by those new inhabitants, he rode away with all speed, and yet no faster than there was need, for an Indian followed him with a gun under his coat to have got within the reach of his piece.

It is said that at the first they used fair words and spoke of trading, but as they went away, told those of the house, that there were others coming after that would deal far worse with them: which within a short time after came to pass, for these were but the messengers of death which was soon after inflicted, and that in a most barbarous manner upon sundry inhabitants of the neigboring plantations.

The English in those parts being much incensed hereat, 25 of them soon after going up Casco bay in a sloop and two boats to gather Indian corn and to look to what they had upon the said bay, near Amoscoggin river; when they came near the houses they heard a knocking, and a noise about the houses, and presently espied two or three Indians, who as yet did not see them. The English being come a good way from their vessel, endeavoured to get between the Indians and the woods, which when they perceived they ran towards the water side, but the English in pursuit killed one of them and wounded another, who however escaped away in a canoe across the river, a third running back towards the woods fled to the other Indians and acquainted them with what was done, who presently came down and lay in wait to intercept the English, that thought of no danger, but scattered themselves all about the place to gather their corn and lade their boats therewith, but before they were ready to go away the Indians coming down fired upon them and forced them all into the sloop; had not some of them been better prepared than the rest, they might all have been cut off; for some little resistance being made by them that were ready with their guns, it gave the rest an opportunity to get all into the sloop, yet not without many wounds. So with much ado, they all escaped with their lives, leaving the two boats almost laden with corn, a prey to the Indians, who presently burnt one, and plundered the other of all that was therein; some are ready to think that the English did imprudently begin the quarrel, and not first enquire into what the Indians were about in the house, and seek redress according to the aforementioned agreement, made at the court at Bennebeek. But if this happened after what follows next to be related, viz. that which was done to old Mr. Wakely and his family, the English can be blamed for nothing but their negligence and security, in that having alarmed their enemies, they stood not better upon their guard, which is not very certain; for it is thought that within a few days after, or the next week, a more horrible outrage was committed upon the family of an ancient man, whose name was Wakely, an inhabitant of Casco bay, who had some discontent which afterwards he often bewailed, resolving either to have returned back, or else to have removed to some securer place, but he was arrested by the sons of violence before he could effect his purpose.

This old man, together with his wife, his son, and his daughter in law, (then far advanced in pregancy) with three grand children were cruelly murdered by those barbarbous savages at one time; another of his grandchildren was taken alive and led into captivity, a daughter of his was said to be carried to Narraganset, which shows that they joined with the southern Indians in the rebellion. When one these Indians had embrued their hands in English blood, they were emboldened to the like bloody attempts in the adjacent places.

This Wakely lived so far from his neighbours, or else was encompassed with creeks or rivers, that no relief could presently be sent to him; however, Lieut Ingersoll, of Casco, the next day with a file of men, repaired to the place where his house stood to see what was the reason of the fire they discerned the day before, where they found the house burnt to ashes, the body of the old man half consumed with the fire, the young woman killed and three of the grandchildren having their brains beat out and their bodies laid under some oaken planks not far from the house; one girl of about 11 years old, was carried captive by them, and having been carried up and down the country some hundreds of miles, as far as Narraganset fort, was this last June returned back to Major Waldern's by one Squando, the sagamore of Saco; a strange mixture of mercy and cruelty.

Soon after Capt. Bonithon's and Major Philips' dwellings were assaulted, one on the east, the other on the west side of Saco river. It is said they had seasonable notice of what was intended against them by their barbarous enemies, those Amoscoggin Indians, by the Indian of Saco, their neighbour, better minded than the rest of his countrymen, who observing a strange Indian coming to his wigwam in company with some of his acquaintance, one of whom informed him of the rest with the stranger were gone, that the said stranger came from the westward, and that his business was to persuade the eastern Indians to fall upon the English in their dwellings here, as the rest had done to the westward. Capt. Bonithon, either upon this information, or upon the knowledge of what was done a little before at Casco, had left his house, and was retired over the river with his family to Major Philips' garrison. Thus two are better than one, for otherwise both might have been destroyed; for upon the eighteenth of September following, being the seventh day of the week, about 11 o'clock those at Major Philips' garrison saw Capt. Bonithon's house on fire, which by the good providence of God was to them as the firing a beacon giving them notice to look to themselves, their enemies being now come; for otherwise they might, to their great disadvantage, have been too suddenly surprised, for within half an hour after they were upon them, when a sentinel placed in a chamber gave notice that he saw an Indian by the fence side near a cornfield; Major Philips, not willing to believe till he might see with his own eyes, ran hastily up, another of his men coming after cried, major what do you mean? do you intend to be killed? at which words he turned from the window out of which he was looking, when presently a bullet struck him on the shoulder, grazing only upon it without breaking the bone. The Indians upon the shot, thinking he had been slain thereby (as they had heard afterwards) gave a great shout, upon which they discerned that they were surrounded by them, whereupon they instantly fired on the enemy from all quarters, and from the flankers of the fortification, so as they wounded the captain of the Indians, who presently leaving the assault, retired three or four miles from the place, where he soon after died, as they were informed: He counselled them to leave the siege, but they were resolved not so to quit the place; nor were those within less resolute to defend it: one of the best men was soon after disabled from any further service, by a wound he received in one of the vollies, made by the assailants; but that did not in the least daunt the rest of the defendants, who continued still to fire upon the enemy: This dispute lasted about an hour, after which the enemy despairing to take the house by assault, thought upon a device how to burn it.

First, firing the house of one of his tenants, then his saw-mill, hoping by that means to draw them out of the garrison to put out the fire, but missing of their purpose in that, they called out, you English cowardly dogs, come out and quench the fire. They continued this sport all the afternoon continually firing upon them. The besieged hoped for relief from the towns but none came, the major still encouraging his men to hold it out which they manfully did all that night, when they were alarmed almost every half hour; and between whiles they could hear their axes and other instruments, knocking about the mills till the next day. Those within the house conceived they were preparing some engine wherewith to burn the house, which really was the case, for about four o'clock in the morning, at the sitting of the moon when he saw a cart with four wheels, having a barricado built in the forepart to keep off shot, and filled with combustible matter, birch rinds, straw, powder, and poles 20 feet long ready to fire the house; he bid them let them drive it within pistol shot, before they made any shot against them; his men were a little discouraged at the sight of this engine; but he bid them be of good courage, and use means, putting their trust in God, who, he was confident would relieve them. The cart when brought a little nearer became unwieldy by reason of the barricado planted in it, and being to pass through a small gutter, one wheel stuck fast in the slough, which brought the cart suddenly to the left whereby the drivers lay all open to their right flanker, when they fired upon them out of the said flanker, and having so fair a shot upon them, and not being above pistol shot from the place, they killed 6 of the enemy, and wounded 15, as they found afterwards, which no doubt made them too late to repent of their resolution, not to follow their captain's counsel and example in leaving the siege; for now they presently parted: so as at sunrise those within the house 40 of them marching away, but how many more were in the company they could not tell.

The Indians it seems went towards Blue Point where it is said they killed several persons, but those in the house feared, the major was called by the men to look out for more help, as they expected their return; but it seems their courage failed them as to another attempt upon an house so well garrisoned and manfully defended. Major Phillips sent to the town for help acquainting them with what had passed, but none was sent them either that day or the next, so having spent almost all their ammunitions, the people that were with him would not be perusaded to tarry longer than Tuesday morning, which constrained him and his family to remove to the town. About a fortnight after, the Indians hearing thereof, came and burnt down the empty house. There were 50 persons in the said house during the time of the siege, and but 10 able hands, they had five more that could do something, but through age or minority not able to make any great aisistance; yet it pleased God, in whose hands are all men's lives and limbs, who is never wont to fail them, who in time of danger are ready to confide in his power and goodness, as not to neglect the use of due means for

A SCENE FROM

THE INDIAN WARS IN NEW ENGLAND.

The lives of fifteen persons, women and children, preserved by the heroism of a young woman.

there own preservation, so to order things, that not one person of all those 50 was either killed or mortally wounded. Major Philips himself was wounded but not dangerously, at the beginning of the assault, his mills with other edifices were the first day burnt by the enemy, and so were all the houses at Saco, or most of them soon after, that were above the fishermen stages. One Mr. Hitchcock being carried captive by the enemy from the same place, died in the winter following by eating some poisonous root instead of ground nuts, as was reported by the Indians afterwards.

Much about the same time, five persons going up the river of Saco, were all killed by the same Indians.

These tragedies being thus acted at Casco bay and Saco, those barbarous enemies dispersed themselves in parties; intending to do all the mischief they could to the English inhabiting about that side of the country. In the same month of September they came down towards Piscataqua, doing the like spoil upon the inhabitants of the several branches of that river which they had been doing elsewhere. In the first place they burnt the two Chestyes houses about Oyster river, and killed two men that were passing along the river in a canoe, and carried away an old Irishman, with a young man taken from about Exeter, who both of them soon after made an escape to a garrison at Salmon Falls in Kittery, by the help of an Indian better disposed than the rest, the first after seven weeks, the other after a month's captivity.

About the same time one Goodman Robinson, of Exeter, with his son, where travelling towards Hampton, where as they passed along, they were waylaid by three Indians, viz. John Sampson, Cromwell, and John Linde, who shot the old man, and left him dead upon the place; his son, hearing the guns, escaped their hands by running into a swamp, whither the Indians pursued him, but could not overtake him, so he got safe into Hampton about midnight, where he related what had befel him by the way, and how narrowly he avoided the danger, intimating likewise that he feared his father was killed, which was found too true by Lieut. Sweet, who the next day with 12 soldiers of the town went to search these woods, where they found the poor old man shot through his back, the bullet having passed through his body, and was stopped by the skin on the other side. Another person of Exter, whose name was Foulsam, was at the same time driving a pair of oxen in the same road, where soon after he heared the report of the guns when Robinson was killed, he espied the three Indians creeping upon their bellies towards him, to do as much for him as they had done for Robinson, but leaving his oxen, he put on his horse with all speed, and so was delivered from the danger that the other fell into; it is reported that one of the Indians made a shot at him: but he was either got out of their reach, or else they missed their aim at that time. The same Indians had a little before met with another Englishman in those woods, one Charles Randlet, whom they carried captive, although he soon after escaped out of their hands, by the help of another Indian called James. It is said there were four Indians out of that company, and that the fourth was sent away with Randlet, so thatthere were but three seen together at the killing and pursuing the other aforementioned. One of the said Indians, viz. John Sampson, was killed by some of Capt. Hathborn's soldiers at Casco bay, in September following, 1676, when the scouts of our forces came upon the Indians on a sudden, and had a small brush with them, but all the rest made a shift to get away: As for the other two, viz. Cromwell and John Linde, one of them it is said, is since killed, or taken and sold away, the other is at Kennebeck, whom vengeance may also in due time overtake, as it hath done the other.

Within a few days after that barbarous act at Oyster river, two Indians viz. one named Andrew, and the other Hopehood, the son of him called Robinhood, assaulted the house of one Tozer, at Newechewannick, wherein were fifteen persons, all women and children, who without doubt had all of them fallen into the merciless hands of the two cruel and barbarous caitiffs, had not a young maid of about 18 years of age, first espied them, who being endued with more courage than ordinarily the rest of the sex use to be (the blessings of Jael light upon her) first shut too the door, whereby they were denied entrance till the rest, within escaped to the next house, that was better fortified; that young heroess kept the door fast against them so long, till the Indians had chopped it into pieces with their hatchets, when entering the house they knocked the poor maid down with their hatchets, and gave her many other wounds, leaving her for dead upon the place; after which they passed on toward the next dwelling, in their way meeting with two children that had escaped the house first broken open by them, they killed one of them, of three years old, which could not follow fast enough or else they that carried it could not convey it over a fence soon enough to save themselves and it; and carried away the other of seven years old, which however was returned safe within half a year after. The poor maid that had ventured her life so far to save many others, was by a strange Providence enabled to recover so much strength after they were gone, as to repair to the next garrison, where she was soon after healed of her wounds and restored to perfect health again.

The next day toward night more of the barbarous enemies being gathered together, they made an assault upon the neighbouring dwellings. The English as many as could be spared out of the garrison (not above 8 in number) pursued after them about half a mile, but night coming on, it was judged best to retreat, lest otherwise they might have been intercepted in their return home, by any of them lying in ambush, which is their usual way of doing mischief. After divers shots made on both sides, but 5 of the enemy appeared; who yet took the advantage of Capt. Wincol's absence (whose dwelling was not far off) to burn his house and two barns more, wherein was much English corn, supposed to be above an hundred bushels in one of them. After they had done this mischief they fled away. The next day after, the same Indians or others of their fellows, came upon the other side of the river, from whence they shot over several times to some that were grinding in the mill, but after exchanging of many shot on both sides, the river betwixt them, six of the enemy showed themselves in the twilight, uttering several insolent and barbarous speeches, calling our men English dogs, &c. yet all this while out of reach of their shot, and then they run away like dogs after they had done barking.

After this those very Indians, as was supposed, burned five or six houses about Oyster river, and killed two men, viz. one William Roberts and his son-in-law. The inhabitants of Dover, with some other resolute young men, being much provoked by these many insolences and injuries done by the enemy, obtained liberty from the major of the regiment to try whether they could not meet with some of the Indians, by secret ambushes and skulking amongst the bushes and trees as the Indians used to do with them; to which end about twenty divided themselves into small parties: Soon after as they were looking for the enemy, a party of ours espied five of the Indians, some gathering corn in the field, while the rest of them were busied in heating an oven to bake some of the fruit which they also gathered in the same field. The English were at such a distance that they could not make any sign to their comrades, without being discovered by the Indians in the field; wherefore two of them crept as near as they could to the house, at one end of the field where they suddenly rushed upon two of the wretches, and knocked them down with the butt end of their muskets, which was not done so silently but the other three in the field took the alarm and fled away, who might else as easily as the other two have been surprised.

These outrages thus daily committed filled all the plantations about Piscataqua with fear and confusion; scarce any place where there was not reason for some to complain either of the loss of their friends or burning of their houses; which caused most of them that lived scatteringly, at any distance from neighbours, either to garrison their houses or else to desert their own dwellings, and to repair to their next neighbours that were better fortified than themselves; but all the inhabitants in general were alarmed to stand upon their guard.

On the 7th of October following, being a day of public humiliation, a man was shot down as he was riding between two garrison houses about Newechewannick, and died of his wounds two months after; the same instant of time two young men were shot dead about a mile from that place; these two had their arms or guns with them, which were carried away by those who killed them, together with their upper garments: It is not said that these three last (though killed upon a day of humiliation) were surprised in their repairing to, or returning from the place of public worship, which would in a great measure have abated the sorrow of their sad funerals, if when they were suddenly arrested by the harbingers of death, they had been so doing. Soon after this they assaulted another house at Oyster river, notwithstanding it was garrisoned, and meeting with a good old man, whose name was Beard, without the garrison, they killed him upon the place, and in a barbarous manner cut off his head, and set it upon a pole in derision. Not far off about the same time they burnt another house and barn.

Upon the 16th of October, being Saturday, about an hundred of the Indians were gathered together to assault Newechewannick; they began with one named Tozer, half a mile

from the upper garrison, at Salmon falls: The said Tozer was presently killed, his son taken captive (but returned after some months restraint) several guns being shot at this assault, alarmed Lieut. Plaisted, at the next garrison, who like a man of public spirit, immediately sent out seven men from the garrison under his command, to see what the matter was, but being met by an ambush laid in the way as they went, lost 2 or 3 of the company, thereat hardly escaping back to the place from whence they came; whereupon the said Lieutenant Plaisted immediately despatched away a messenger to Major Waldern, at Quechecho, which, because it seems to be the last time that ever that good and useful man set pen to paper, the letter shall be here inserted.

Salmon falls, Oct. 16, 1675.

Mr. Richard Waldern and Lieut. Coffin, these are to inform you that just now the Indians are engaging us with at least an hundred men, and have slain four of our men already, Richard Tozer, James Barney, Isaac Bottes, and Tozer's son, and burnt Benoni Hodsdan's house: Sirs, if ever you have any love for us and the country, now shew yourselves with men to help us, or else we are all in great danger of being slain, unless our God wonderfully appears for our deliverance. They that cannot fight let them pray: nothing else, but I rest,

Yours to serve you.

ROGER PLAISTED,
GEORGE BROUGHTON.

What answer was returned to the importunate and pathetical letter is not fully known at present; most probably he that was most concerned in the contents of it was either absent from home or in no capacity to send the relief desired, which if it could have been had, might have prevented the sad mischief that fell out the next day; when Lieutenant Plaisted being more earnestly bent to perform that last office of love to his deceased friends, whom he could not by all his endeavours save from the danger of death, while they were in land of the living, would needs venture himself with 20 soldiers out of his garrison, to fetch off the dead bodies.

To that end he ordered a pair of oxen to be yoked to bring them to his garrison, in order to their christian burial, not considering that the Indians lay skulking thereabouts, waiting for such opportunities. They went first to the farthest place, where they found R. Tozer's body, and put it in a cart, but coming back to take up the other two bodies which were fallen in a little swamp near to the garrison, they were set upon by 150 of the enemy, who had hid themselves in the bushes, and under a stone wall, and logs in the way as they were to pass; by the sudden noise of the guns the cattle being frighted, ran away to the garrison with such of the dead as were first laid thereon (and possibly with one of them wounded at that instant) leaving their owners to fight it out with the enemy. Lieut. Plaisted being thus desperately assaulted, he with his twenty men were forced to retreat to a place of better advantage; but being there so warmly pursued, they were not able to abide it long, although they killed and mortally wounded several of the Indians, as themselves have since confessed; but they most of them being so much overmatched, took the opportunity of a fair retreat and so got safe to their garrisons, while Lieut. Plaisted out of the height of his courage, disdaining either to fly from or yield himself (for, 'tis said the Indians were loth to kill him, but desirous rather to take him prisoner) into the hands of such cursed caitiffs, did fight it out desperately, till he was slain upon the place; his eldest son and another man were slain in their too late retreat, and his other son was sorely wounded, so that he died in a few weeks after.

The Indians were contented with the mischief for the present and slunk away into the woods before the next day, when Capt. Frost came from Sturgeon creek, a few miles below the river, with a party of his friends and buried the dead. During these onsets the enemy also took the advantage to burn three houses and two barns before they left the place.

The latter end of the same month they burnt a mill near the same place belonging to Mr. Hutchinson, a merchant of Boston; from whence they came down towards Sturgeon creek, where they burnt one house and killed two men not far from Capt. Frost's dwelling, he escaping himself very narrowly, being shot at by the enemy, about ten in number, who might easily have burnt his house and taken all that was in it, being out three boys besides himself, had he not used this policy, to call out to some to march this, and the other way, to look after the Indians, as if he had many at hand to command, which under God was the means of his escape; for his house was neither fortified, nor well manned, although far from neighbours.

The next day the said Indians passed down the river on Kittery side, killed one man, whose house they first plundered, and then set it on fire; all this was done just over against Portsmouth, from whence out of a small battery was discharged a piece of ordinance, which by a good Providence was directed so to fling its shot, as it fell very near a party of the Indians, for they were so affrighted therewith (if none of them were killed) that they left a good part of their plunder near the place. They were pursued by some of the English before they could recover their home, and by the help of the snow that fell about that time, were traced till they were overtaken, but being near a swamp escaped, through haste leaving two of their packs behind.

Soon after they went up the river again to Quechecho, where they burnt a house and two or three barns. Another party of them got over or beyond the other branches of Piscataqua river, towards Exeter, and Lamprey Eel river, where they killed one man. Many of them were in the woods about Exeter, and between Hampton and Exeter, where they killed one or two men as they were travelling homewards, occasioning the people of those towns to stand continually upon their guard, which proved a great annoyance to the inhabitants.

But let us look a little back to the plantations more eastward from Piscataqua river, where these outrages of the Indians first began.

At Casco bay, Lieut. Ingersoll's son with another man, going out a fowling about this time, were both killed before they returned home, his father's house being burnt, with many others also thereabouts.

At Black point, Lieut. Augur with two more were assaulted by the Indians, where after many shot exchanged betwixt them, himself was so wounded, that he died soon after, and his brother also was killed within a few days after, not far from the same place.

When the rising of the Indians first began in those eastern parts (with us called the county of Yorkshire) Capt. Wincol of Newechewannick, with some others, having a sympathy for some of his neighbours, marched up that way with a small party of men. In his first skirmish with the enemy he chanced to lose two or three of his company; the rest not being above 11 in all, as they were marching along by the sea-side were assaulted by a great number of the Indians, judged to be 150; being hard beset with so great a number, they retreated to an heap of bolts that lay near the water side, by the shelter of which they lay safe from the enemy's guns, and so well played their few guns, that they slew many of the Indians, and put them all to a kind of rout at last; after which, by the help of an old canoe they recovered safe to the other side of the bank. But nine Saco men had worse success who came with a good intent to help their friends, upon the hearing of their guns; but as they came to rescue Capt. Wincol with his small party, they themselves fell into an ambush of the enemy and so were all cut off, with two other men also, near the place where the first skirmish was, for the Indians from the shore side could discern any that were coming towards them when they were at a great distance, and so might easily way-lay them before they could come up to them. Near upon seven houses were burnt about this time, and some persons killed at Black point.

Two persons were killed at Wells in the beginning of winter, one of them was a servant to Mr. William Symmonds (one of the principal men in the town aforesaid) the gentleman himself with his family were removed to a garrison house in the middle of the town. His servant going early in the morning to look after some business there, tarried longer than was needful to provide something for himself, the Indians invited themselves to breakfast with him making the poor fellow pay the shot when they had done with the loss of his life.

A week after one Cross was slain at Wells likewise, who was a kind of a distracted fellow. Also one Isaac Cousins was there killed in the beginning of winter, after there had been some overtures of peace between Major Waldern and the Indians.

With such kind of mutual encounters was the latter part of the year spent betwixt the Indians and the English from Piscataqua river to Kennebeck, from the beginning of August to the end of November, wherein many were slain on both sides; of the English in those parts were slain upwards of fifty; the enemy lost, as appeared afterwards by their own confession, above 90 partly in the aforesaid skirmishes, and partly in their joining with the Indians to the westward, whither it is said many were invited to repair, to help destroy the English, in hopes to enjoy their possessions afterwards; but God had otherwise determined, who did arise at last to save the meek ones of the earth, and plead the cause of his people.

The Governor and council of Massachu

setts had at this time their hands full with the like attempts of Philip and his accomplices at the westward, yet were not unmindful of the deplorable condition of these eastern plantations; having committed the care thereof to the majors of the respective regiments of the several counties on that side of the country but more especially to the care and prudence of the honourable Major D. Dennison, major general of the colony, a gentleman who by his great insight in, and long experience of all martial affairs, was every way accomplished for the managing that whole affair; he had to ease the other side of the country, drawn out a sufficient number of soldiers from the next counties, to have reduced all the Indians eastward to their obedience; but just as they were intended to march up to the head-quarters of the Indians, to fall upon them there, viz. at Ossapy and Pigwauchet, about an hundred miles up into the country northward, the winter setting in so sharp and severe in the beginning of December, and latter end of November, it was not possible to have marched a day's journey into the woods without hazarding all their lives that should venture up, the snow being found generally in those woods four feet thick on the tenth of December, so as it was not possible for any to have travelled that way unless they carried rackets under their feet, wherewith to walk upon the snow: This only consideration forced them to lay aside the design for the present, but soon after it was done to their hands; for the depth of the snow, and sharpness of the cold, were so extreme, that the Indians in those part were so pinched therewith, that being starved they sued for peace, making their address first to Major Waldern, on that account by whose mediations that whole body of Indians eastward were brought to an hopeful conclusion of peace, which was mutually agreed upon and possibly might have remained firm enough to this day, had there not been too just an occasion given for the breaking of the same, by the wicked pactice of some lewd persons which opened the door, and made way for the bringing in all those sad calamities and mischiefs that have since fallen upon those parts of the country as shall hereafter be declared.

In the latter end of June, 1676, the Indians that had made a general conspiracy against the English, were strangely dispersed and dispirited, so that from that time they began to separate one from another, and every nation of them to shift for themselves, as hath already been mentioned in the former part of this narrative. Canonicus, the great sachem of the Narragansets, distrusting the proffers of the English, was slain in the woods by the Mohawks, his squaw surrendering herself, by this means her life was spared.

Many of those about Lancaster, and the places adjoining thereto, did cunningly endeavour to hide themselves among those Indians about Piscataqua, that by Major Waldern's means had concluded a peace, yet could neither dissemble their nature and disposition from suspicion of mischief, nor yet so artificially conceal their passions, but they were easily discerned by such as in former times had any acquaintance with the eastern Indians by way of trade, or other converse: Whereupon the forces newly raised in Massachusetts under the command of Capt. William Hathorne and Capt. Joseph Still, designed for the subduing those Indians about the river of Merrimack and Piscataqua, that still stood out in hostility against the English, meeting with those under the command of Major Waldern aforesaid and Capt. Frost of Kittery; it was mutually agreed betwixt those several commanders to sieze upon all those Indians which at that time were met together about Major Waldern's dwelling at Quechecho; the design succeeded according to expectation, and all the Indians were handsomely surprised the 6th of September 1676, without the loss of any person's life, either Indian or English, to the number of near 400; by which device, after our forces had them all in their hands, they separated the peaceable from the perfidious, that had been our enemies during the late troubles; finding about 200 involved in the former rebellion more or less, they accordingly were sent down to the governor and council at Boston, who adjudged 7 or 8 of them immediately to die; such as were known to have had their hands in the blood of the English, or that had been shed by their means; the rest that were found only accessories to the late mischiefs, had their lives spared, but were sent into different parts of the world to try the difference between the friendship of their neighbours here, and their service with other masters elsewhere.

Those who had been always peaceable and true to the English, never intermeddling in the quarrel, as Wanalancet, the sagamore of Pennicook, and some others, were quietly dismissed to their own places. Besides those that were surprised at the time aforesaid, there were several others who had been the chief actors, that were taken up and down in those woods beyond Merrimack, and so were delivered up to justice; as John Monoco, Sagamore Sam, old Jethro with some others, as hath been already mentioned, yet young Jethro brought in 40 at one time. It was a special favour from God so to order it, that the Indians aforesaid, were so surprised; for had they continued their former rebellion, and had taken the opportunity to have joined with the eastern Indians, as some of them did a few months before, they would in all likelihood have utterly destroyed all the plantations of the English beyond Piscataqua river, as appears by the mischief that was lately done by means of a few, from too much connivance of some in those parts that entertained a better opinion of them than it seems they deserved. For whereas mention was formerly made of a small party of Indians, that on the 3rd day of May, in this present year, had murdered one Thomas Kembel, of Bradford, and carried away his wife and five children captive; yet two or three of the actors did, upon what consideration is not known, return the woman and children again within six weeks, and because of their voluntarily returning of them were dealt more favourably with; being only put into prison at Dover, for a time; yet possibly conceiving that a prison was but a preparation for a worse evil, they took an opportunity (two of the chief actors in the aforesaid mischief, one called Simon the other Andrew) to convey themselves out of the place of restraint, and afterwards going amongst the Amoscoggin and Kennebeck Indians, have joined with them in those bloody and cruel depredations lately made in those parts, which follow in order next to be related.

Some little colour or pretence of injury was alleged before those eastern Indians began their outrage, both in the former, as well as in the present year; the chief actor or rather the beginner of all the aforesaid mischiefs eastward, is one Squando, the sagamore of Saco Indians, whose squaw, as is said was abused by a rude and indiscreet act of some English seaman, the last summer, 1675, who either overset the canoe wherein the said squaw with her child were sailing in a river thereabouts, or else to try whether the children of the Indians, as they had heard, could swim as naturally as any other creatures, wittingly cast her child into the water; but the squaw immediately diving into the water after it, fetched it up from the bottom of the river, yet it falling out within a while after the said child died (which it might have done if no affront had been offered) the said Squando, father of the child, hath been so provoked thereat that he hath ever since set himself to do all the mischief he can to the English in those parts, and was never as yet, since that time, truly willing to be reconciled, although he is said to have sent home some that were taken captive the last year. Surely if their hearts had not been secretly filled with malice and revenge before they might have obtained satisfaction for the wrong done at an easier rate; more probably it is that this was only an occasion to vent this mischief they had formerly conceived in their hearts.

There is an injury of an higher nature mentioned as the ground of their quarrel with us who live about Pemmaquid, which happened the last spring, viz. one Laughton, with another person or more, who having obtained under the hand of Major Waldern, a warrant to seize any Indians eastward that had been guilty of any murder or spoil done to the English in those parts, did most perfidiously and wickedly entice some of the Indians about cape Sables (who never had been in the least manner guilty of any injury done to the English) on board their vessel, or else some other way, and then carried them away to sell them for slaves; which the Indians in those parts look upon as injury done to themselves, have alleged it to the inhabitants of Pemmaquid, as one of the principal grounds of their present quarrel: The thing alleged is too true as to matter of fact, and the persons that did it were lately committed to prison in order to their further trial. Yet all those Indians do, or may know full well, that they who did them that wrong, were liable to due punishment (or else their quarrel might be accounted just, and they considered as Indians, must have the more allowance) if they could be found, nor ever were any countenanced amongst us, that had done them any kind of injury, nor did those that take upon them the revenging of the injury, know that they were inhabitants of this country that did the wrong; nor was there ever any orderly complaint made thereof; but this cannot excuse their perfidiousness and cruelty. Some other pretenses alleged by the said Indians they yet do bear no proportion to the mention of a wrong, or injury, viz. because our traders were forbidden to sell any ammunition to any Indians whatsoever; which those Indians say they cannot live without; yet seeing they themselves, as the westward Indians have so ill improved that which they had be-

fore, there was little reason why they should quarrel with us for selling no more.

Further also, it is affirmed by some persons worthy of credit, that for divers years past have lived in those parts, that the Indians thereabouts need not have wanted powder and shot, only they wanted something wherewith to cloak their malicious and barbarons practices of late committed against us; but there being different opinions about this point, we shall leave it for the present. But this beingpremised in reference to the pretended ground or occasion of the quarrel, it remains that the effects therefore be now related.

Before the war with Philip was well ended to the southward, there was a fresh alarm sounded again to the eastward; for on the 11th of August, 1676, the very day before Philip's heart that had harboured so many mischievous and treacherous devices against the English, was by one of his own company shot through, a party of Indians began their outrages at Casco in a most perfidious and treacherous manner, killing and carrying away captive, to the number of 30 persons, and burning their houses; amongst whom was the family of one Anthony Bracket, an inhabitant of Casco who was thought to have been killed, but he himself, with his wife, and one of his five children carried away captive, with a negro did happily make an escape from their bloody and deceitful hands, in November next ensuing.

The manner how Anthony Bracket and his wife made their escape was very remarkable and therefore judged worthy to be here inserted, although out of due place. The Indians that had led them captive having brought them to the north side of Casco bay, news was brought to the said Indians of the surprizal of Arowsic's house in Kennebeck, with all the stores therein, which did so rejoice them, that they made all haste to share in the good things there to be had: Thus eager to be gone, they promised Bracket and his wife that they also should have a share therein if they would haste after them: The women having a little before observed an old birch canoe lying at the water side, hoped it was an opportunity Providence offered for their escape; whereupon she first prudently asked the Indians to let the negro, their own servant (at the same time carried captive by them) help them to carry their burthens, which was granted: then she begged for them a piece or two of meat, which was not denied them. Thus being furnished with help and provision, the Indians leaving them behind to some after with their several burthens, and a young child, they could not but look upon it as a *nutrus Divinus*, to bid them shift for themselves: The woman also found a needle and thread in the house, with which she mended the canoe, while they tarried at that side of the bay, in which they soon ventured to get away, which prosperously succeeded; for in that old canoe they crossed a water eight or nine miles broad, and when they came on the south side of the bay, they might have been in as much danger of other Indians, that had lately been about Black point, and had taken it; but they were newly gone. So things on all sides thus concurring to help forward their deliverance, they came safely to the seat at Black point, where also by special providence they met with a vessel bound for Piscataqua, that came into that harbour but few hours before they came thither, by which means they arived safe in Piscataqua river soon after; all which circumstances are very worthy to be noted.

Amongst those Indians that siezed this Bracket's family, the chief was one Simon, who had but a little before escaped out of Dover prison, where he was not carefully overlooked; he had had his hand in the murder of sundry English, as he had confessed; not missing any, save one, on whom he had discharged his gun; but because he came in voluntarily, bringing in a woman and five children of the English, who had been carried captive a little before, it was questioned whether his last act of submission might not balance his former transgression, and therefore he was committed to that, not so secure a prison, till his cause might be further considered of. It is said that coming to Bracket's house over night, he pulled forth a counterfeited pass under the hands of some public officers, or men entrusted with that services making shew of all friendship; but in the morning, or soon after, he pulled off the visor of a friend, and discovered what he was; yet granting life to this person and his family, that did not or could not resist, which he denied to some of the neighbours not far off, who were many of them killed by this bloody villain and his partners.

There are some circumstances in the assault of Anthony Bracket's house very considerable, which, because it was the first outrage committed by the Indians in the second insurrection, 1676, are worthy of a more particular remembering.

This Indian before mentioned called Simon, after he had escaped out of the prison of Dover came to Casco, and either in the end of July or beginning of August, acquainted himself of this Anthony Bracket, and oft frequented his house. Upon the 9th of August some of the Indians having killed a cow of his, the Indian Simon coming to his house promised to bring the Indians to him that had killed his cow. In the meantime they of the place sent two men to Major Waldern's at Dover, to complain of this injury done by the Indians, but before their return, very early in the morning on the 11th of August, Simon with a party of Indians came to Anthony Bracket's house, and told him there were the Indians that had killed his cow; but as soon as they had said that, the Indians went further into his house and took hold of all the guns they could see: Bracket asked what was the meaning of that, Simon replied, that so it must be, asking him withal, whether he had rather serve the Indians, or be slain by them; which he answered, that if the case were so, he would rather choose to serve them than be killed by them: Simon replied, that then they must be bound which was presently done. The said Bracket, his wife and a negro were all bound by the Indians; his wife had a brother, who offering to resist was killed forthwith; the rest, with five children were led away prisoners.

Two hours after one Pike, that lived not far off, but knowing nothing of all this, went up in a canoe, toward one Robert Corban's house where he found one Humphrey Durham and Benjamin Atwel at work about their hay; after a little stay he left them, intending to go up higher with his canoe, but as soon as he was a little past, he heard the report of guns which made him with another man he had with him, presently return back; before he came beyond Corban's house he saw an English boy running with all haste which made him fear some mischief was at hand, and presently a volley of shot came against them, but the bullets flying over their heads, did them no hurt; presently Simon appeared, and called them to come on shore; but they liked not his courtesy, and turning their canoe into the stream, got out of the reach of their guns, hasting down to his own house with all speed; when he came near to his house, he called to the people to make haste away towards the garrison house, and bid the rest look to themselves, and fire upon the Indians that were coming against them: In the meanwhile the Indians passing from Anthony Bracket's to Corban's, killed Corban himself, together with Humphrey Durham and Benjamin Atwel, before mentioned; then passing on to the other houses, killed some, and carried others away captive. At one of the next houses the women and children got off into the water by a canoe; but one James Ross, his wife and children were carried away. Corban's wife, with one of the other men's wives, and the children of another, they carried away likewise.

In another side of the town as three persons were going to reap at Anthony Bracket's, passing from an house where they left their canoe met with John Mountjoy and one Wakely, to whom they told what had happened, soon after they heard two guns fired, whereby it seems two men were killed; wherefore coming back towards T. Bracket's, where they left their canoe, they saw him shot down by the Indians; one of the three not so well able to run, hid himself in the bushes in hopes to escape more conveniently afterwards, which accordingly he did; but in the mean time he saw the Indians carry away Thomas Bracket's wife and children. Soon after the three men aforesaid got safe to Mr. Mountjoy's garrison, but not trusting to the security of that garrison, they soon after repaired to an island in the bay, called James Andrew's island. One George Lewis and his wife tarried all this time in their house till the next day, when they had opportunity to get safe to the island aforesaid, together with the two men that were now returned from Major Waldern's; whither they had been sent but too late, to make complaint of the Indians that had counterfeited his pass to travel into those parts, and had done this mischief.

The day after, one George Felt, suspecting the worst by reason of a smoke he saw on the opposite side of town, took his wife and chilren in a canoe to see what the matter was, but when he came near a point of land not far off he found several of his neighbour's goods, which made him conclude their owners were killed, which was a sufficient warning to him likewise to fly for his life, which he did to the same island. After a number of them had escaped thither, they recollected that they had left powder behind them in one or two places: whereupon they determined to venture a party of them in the night, to prevent the Indians from having any advantage thereby, and for their own defence if occasion should

require; accordingly their attempt succeeded well, for they brought away a barrel of powder from one Wells's house, and likewise a considerable quantity out of a chest in a store house, which the Indians had been ransacking, and had taken things out of the other end of the chest, yet overlooked the powder. In this surprisal of the plantation in Casco bay, called Falmouth, there were 34 persons killed and carried into captivity.

That this was not a casual attempt, but a designed plot, will appear in that, just about the same time, the Indians at Kennebeck made the like insurrection whereby it is concluded, either that the Indians which escaped from Dover stirred them up thereunto; or that the said Indians finding them in a disposition tending that way, by reason of some injuries done those that dwell farther northward, they offered their service to help forward the design.

It is to be noted here that the Indians about Kennebeck were persuaded to continue their former amity with the English, notwithstanding the report of Philip's rising that year before, and the outrages committed the last autumn and winter following; yet which is more, they had lately renewed their league with the English in those parts, although they had often complained to those of Pemmaquid, of the injury they suffered in the withholding from them the trade of powder and shot, without which they said they could not subsist, and for want of which, it is alleged by themselves, that some of them perished the last winter.

But the quarrel of late fallen out betwixt the English and the Indians about Kennebeck and eastward thereof, being a matter of great importance, it shall, for the satisfaction of the reader, in what follows be more particularly described, it being the duty of every one that publish things of this nature, to do the right of an historian to all who are any ways concerned in what is made public. The information was received from a prudent person, an eye and ear witness of all that happened amongst the said Indians both the former and present year, and one that was more publicly concerned in those transactions than some others, therefore the more credit may be given thereto.

Mention is already made of what happened in September, 1675, to the company belonging to a sloop and two boats that went up Casco bay to gather corn, upon that accident it is said divers Indians on the east side of Kennebeck river repaired to their fort at Totonnock, (a place higher up in the country beyond Kennebeck and Sheepscot river) where was an English trading house: and the Indians eastward of said river, had as yet done no harm to any of the English, yet did Capt. Sylvanus Davis, agent for Major Clarke and Capt. Lake of Boston upon these overtures think fit to fetch down the powder and shot, with other goods from the said trading house, telling the Indians by the messenger sent up, he would have them come down and live below in that river to take off jealousies, and that he would then supply them with what was needful.—But the messenger told them in case they would not come down and deliver up their arms the English would kill them. *He that sendeth a message by the hand of a fool*, saith Solomon, *cutteth off the feet, and drinketh damage.* This message delivered by him as he afterwards confessed, but who put it into his mouth, or whether it was the device of his own heart does not at present concern us to inquire, but the damage that side of the country had sustained thereby is not easy to recount; for upon this threatening message the Indians forsook their fort and went further eastward and sent to John's river, and to the sea side, to get all the Indians they could together to come up Penobscot river.

A gentleman who at that time lived at Pemmaquid, a kind of superintendant over the affairs of that place, considering the sad state things were running into, laboured to obtain a parley with the said Indians, or with some of them, which after much trouble and cost he did accomplish. But in the meantime, such was the violence used by some refractory English in those parts, that they could scarce be restrained from offering violence to the persons he sent up as messengers, and others that lived quietly amongst them, and did also as violently set themselves up to oppose him or any others that acted with more moderation than the rest; protesting against them as those who, for gain, supplied the Indians with powder and shot, and said they would kill any Indian they met; others at Monhiggon offered five pounds for every Indian that should be brought, yet would not these persons that were so violent against the Indians in their discourse, be persuaded then or afterwards to fight the Indians in an orderly way, as appeared both by their security in not acting better upon their guard, and by their sudden flight afterwards, running away, like a flock of sheep at the barking of any little dog. Things being in this posture, what could be expected but a present war with the Indians, although as it seems there were few or none to be found willing to manage it in those parts. However, the person aforesaid understanding the general court at Boston had appointed a council of war at Kennebeck, applied himself to them, laying before them the desperate state things were fallen into; whereupon they issued out warrants to restrain all manner of persons meddling with the Indians without further orders, which within a few days should be had. In the meantime the sachems of the Indians met at Pemmaquid, where after many complaints made of the hard dealing of the English in Kennebeck river, they came to terms of peace, promising to keep true friendship with the English, and to hinder the Amoscoggin Indians from meddling with the English, if by any means they could, and also to return peaceably in the spring of the year. This gentleman aforesaid, having a long time wanted to go to Boston, was willing to take the opportunity of the present winter, hoping things were now pretty well settled in those parts between the Indians and the English, found soon after that he was cited thither to answer some complaints, though ill grounded, for selling powder and shot to the Indians contrary to order. But those false opinions being easily blown away by his appearance at Boston, and having despatched his business there, he returned before the winter was over to Pemmaquid, where hearing of a vessel that intended to take Indians in those parts and carry them to market, which he had many strong reasons to believe, (it being no hard matter to surprise many such, that suspecting no fraud, would easily be enticed aboard a vessel to trade, or may be to drink liquor) sent to both the master and the company, if they had any such intent, to forbear, seeing those Indians were at peace with us; and likewise to the Indians, to inform them of such a vessel, and to beware thereof; but yet it seems the master and company took several Indians eastward, who were also at peace with us, and to our great sorrow shipped them on board for a market.

The winter being now over, the aforementioned agent of Pemmaquid went to a meeting of the Indians eastward, to persuade them of the country's willingness to continue a peace with them. They seemed very joyful thereat, and in the spring brought some presents to confirm the peace, and to that end also delivered up an English captive boy to those of Kennebeck.—But when the summer came on, the said Indians having liberty to visit their friends as they used to do, they missed many of them who had in the winter been perfidiously carried away, and as is related, they fell into a rage against the English, making complaint thereof to the said agent, Mr. Earthy Mr. Richard Oliver, and others. They were told means should be used for bringing those back again which had been so transported. Those to whom the complaint was made did scarce believe it to be true, not having heard thereof from any other hand, and probably hoping none, especially after such solemn warning, would deal so perfidiously with heathens, to lay such a stumbling block before them.

The Indians being certain of the thing done, could not be easily pacified, being likewise incensed against the English for withholding the trade of powder and shot the last winter, saying they were frighted from their corn the last winter, by the people about Kennebeck, insomuch that many of them died in the following winter for want of powder, and wherewith to kill venison and fowl; adding withal that if the English were their friends, they would not suffer them to die for want thereof. However, the said agent making the best he could of a bad cause, used all means to pacify the complainants, and to that end promised them that if they would meet with any of the Amoscoggin Indians (who had all along the bitterest enmity against the English) he would give them a meeting to treat in order to a peace, Major Waldern having already concluded a peace with the Piscataqua and Casco Indians, and by that means, if they could conclude the like peace with the Amoscoggin men (that could not yet be found) there would be a general peace with all the Indians eastward of Piscataqua, which the Indians that were present at this discourse seemed very joyful at. Yet still by one fatal accident or another, jealousies still seemed to increase in their minds, or else the former injuries began to boil afresh in their spirits, and not being easily digested, whatever had been said or done to allay the offensiveness thereof. Soon after comes a post from Totonnock, to desire him to repair thither according to his promise, where they told him he should meet Squando, and divers Amoscoggin sachems, and the Mug was sent post to fetch the said Squando. This gentleman mindful of his promise, went with the post to Kennebeck, finding

Capt. Lake at his house in Arowsick. It was judged meet that Capt. Sylvanus Davis should go with him, with instructions from the council then sitting in Kennebeck, how to carry on their treaty. After they had gone part of the way towards Totonnock, they came to an English house, where they were told that great jealousies of deceit in the Indians were upon their spirits, from what they had heard of Mug, and Tarumkin, an Amoscoggin sachem. Going further, to a place called Kedonucook, they met with Indians, who were very shy of telling them any thing; which added to their former intimation greatly increased their fears; but being resolved on their voyage, they proceeded in their way thither, yet falling short of the place on purpose, that they might finish their business with them the next day. When they came to their fort, they were saluted with a volley of shot, then brought into a wigwam where their sachems were: Madockawando sat as a chief, who now stiles himself their minister. Being set in council, they made Assiminasqua their speaker, whose adopted son was the said Madockawando: He told them it was not their custom, if any came as messengers to treat with them, to seize upon their persons, as sometimes the Mohawks did with such as had been sent to them: Captain Davis and the other gentleman, told them therein they dealt like men: answer was presently made them, you did otherwise by our men, when fourteen came to treat with you, you set a guard over them, and took away their guns; and not only so, but a second time you required our guns, and demanded us to come down unto you, or else you would kill us, which was the cause of our leaving both our fort and our corn to our great loss.

It was without doubt no small trouble to their minds, in a treaty with those pagans, *hæc diei potuisse, and non potuisse refelli:* Yet to put the best constructions that might be on such irregular actions, which could not well be justified, they told them the persons who had so done, were not within the government, and therefore, though they could not call them to an account for so acting, yet they did utterly disallow thereof: we sent for you to Pemmaquid, and treated you kindly, and kept you, as you know, from the violence of the English; the Indians replied, we do but inform you, and will treat further in the afternoon; but when the afternoon came, our two messengers told them their business was to treat with the Amoscoggin sachems, and that they were sorry Squando was not there; then having confirmed peace with those eastward Indians they entreated the Amoscoggin men to speak, who likewise urged Tarumkin, the chief Amoscoggin sachem to speak, who after some pause said he had been to the westward, where he had found many Indians unwilling for peace; but says I found three sachems (whom he named though those he spake to knew them not) willing to have peace; and for my own part I am willing for peace, and gave them his hand with protestation of his continuing in friendship; so did seven or eight more of the Amoscoggin men; whose names they took, of whom Mug and Robinhood's son were two. After this Madockawando asked them what they should do for powder and shot, when they had eat up their Indian corn, what they should do for the winter, for their hunting voyages? asking withal, whether they would have them die, or leave their country, and go all over to the French? Our messengers told him they would do what they could with the governor; some might be allowed them for necessity: He said they had waited long already, and therefore would have them now, say yea or nay, whether they should have powder, as formerly or not? Our messengers then replied, you yourselves say many of the western Indians would not have peace, and therefore if we sell you powder, and give it to the western men, what do we but cut our own throats? Adding further, it is not in our power without leave, if you should wait ten years more, to let you have powder; at which words they seemed much to be offended.

But yet the next day they resolved to go down with them and speak with the western men, thereby, if it might be, to stop their further proceedings.

So going down with them the next day, they met with some Indians who had got strong liquor, with whom they fell a drinking; our messengers stayed at two places for them, and finding that still they tarried behind, not knowing what further to do, they went home, it being the sixth day of the week; but the next night save one, news came to Kennebeck, that the Indians had killed divers English in Casco, although it was not yet known at Pemmaquid: Upon this news Capt. Davis sent out one sentinel the next night; the rest (such was their security) went all to bed, and in the morning were all like Laish surprised: Thus might it be said *Invadaunt Æeden sommo (sino) vinoq; sepultam.* The particulars of the surprising of Kennebeck, and Arowsick house, are thus related by such as were acquainted therewith.

Upon the 13th of August, 1676, several Indians repaired in the evening to the house of Mr. Hammond, an ancient inhabitant, and trader with the Indians upon Kennebeck river, his daughter, or a maid that was servant in the house, either naturally afraid of the natives, or else from something she observed in the countenance or carriage, manifested so much fear, as made her run out of the house to hide herself in some place abroad; the Indians perceiving it, the more to dissemble their treachery, ran after her and brought her into the house, telling her, (although they could not persuade her to believe) that there was no reason to be afraid of them; presently after more of the barbarous villains coming into the house, she grew more afraid than before, being now more strongly persuaded that they came on purpose to kill or surprise those in the family, whereupon she suddenly made an escape out of the house, and presently passed into a field of Indian corn, whereby she might the better avoid the danger of any pursuer, and so run across over the land that night, ten or twelve miles, to give them notice that lived at Sheepscot river; it is said that after she got out, she heard a noise in the house as if they were fighting or scuffling within doors; but she did not count it wisdom to go back and see what the matter was, knowing before enough of their villainies, how well soever her mistress (that was more versed in the trade of the Indians) might think of them. Those of Sheepscot taking this warning, escaped away as soon as they could, leaving their cattle and dwellings as a prey to the Indians. What befel master Hammond and his family, is not yet certainly known: Reports pass up and down, that some who came down the river afterwards, saw some of the dead stripped upon the bank of the river, which make us fear the worst concerning all the rest; for certainly the whole family, 16 in number, were all at that time either killed or carried away captive, none save the maid aforesaid being known to make an escape to inform their friends, like Job's messengers, what befel the rest of the family.

The Indians having in this manner surprised Mr. Hammond's house, they pased down the river the same night, but going by another house, they meddled not with the people, only turned their canoes adrift, that they might not find means afterwards to escape themselves, or help others so to do: Possibly their chief aiming at Arowsick house, they would not for fear of being discovered make any attempt upon a place near by; wherefore the 14th of August, very early in the morning, having in the night, or before break of day, passed over on the island called Arowsick; several of them undiscovered lay hid under the walls of the fort, and behind a great rock near adjoining, till the sentinel was gone from his place (who went off it seems sooner than he should, considering the danger) when presently some Indians followed him in at the fort gate (as some report) while others of them immediately seized the port-holes thereof and shot down all they saw passing up and down within the walls, and so in a little time became masters of the fort, and all that was within it: Capt. Lake, joint owner with Major Clark of the whole island, hearing the bustle that was below betwixt the Indians and those that belonged to the place, was strangely surprised, yet himself with Capt. Sylvanus Davis and two more, understanding that the Indians had seized the fort, and killed divers of the English, apprehending it bootless, or rather heartless to stay, as not being able to stand upon their guard or make any resistance, made a shift to find a passage out of the back door, whereby they escaped to the water side, where they found a canoe, in which they all entered, and made away toward another island near by: This was not done so secretly but the Indians discerned them before they were gone far: four of them therefore hasted after those that had escaped in another canoe, and coming within shot discharged their guns upon them, whereby said Davis was badly wounded; yet making haste, as they generally use to do that fly for their lives, *timor addidit alas*, they got ashore before the Indians overtook them; it is said they were strangely dispirited, or else they might easily have defended themselves against their pursuers: but when once men's hearts are sunk with fear and discouragement upon a sudden surprisal, it is hard to buoy them up, to make any resistance. Capt. Davis being badly wounded, could neither trust to his legs to fly, nor yet make use of his hands to fight, yet was strangely preserved: Providence directing him to go into the cleft of a rock near by the place where he first landed; the Indians by the glittering of the sunbeams in their eyes as they came ashore, did not discern him: so that lying hid under the covert of the hand

of Providence for two days, he at last crawled a little above the water side, till he found a canoe, whereby he escaped with his life. The other two were better footmen, and parting with Capt. Lake, made their escape ten or twelve miles to the farther end of the island, and so escaped from the Indians, till they found means to get off. Poor Capt. Lake, who a few hours before slept quietly in his mansion house, surrounded with a strong fortification, defended with many soldiers, is now forced to fly away with none to attend him; and as the awful hand of Providence ordered things, was as some say, pursued by such Indians as were mere strangers to the place, that knew not the master from the man, but by one of whom he was shot down, as is supposed soon after he came ashore: Lieut. Davis heard two guns, by which it was thought and soon after was known to be by an Indian, who hath since confessed to Capt. Davis that he shot him that day Arowsick was taken, which he intended not to have done, but that he held up his pistol against him, whereas if he had but asked quarter, he should have had his life. Capt. Lake was slain at that time, although many hopes were for some time entertained that he was taken alive, and kept with other captives amongst the Indians; and it is said the Indians of those parts did not intend to kill him if they could have helped it: but it was known his hat was seen upon an Indian's head not long after, which made his friends conclude what had befallen that good man, who might emphatically be so termed, in distinction from them that may truly be called just men and no more: For it seems according to the just agreement betwixt himself and his part owner of Arowsick Island, it was not his turn this year to have been upon the place, but such was his goodness, that he yielded to the desire of his friend and partner, as in his room and stead to take upon himself that service in this time of danger; it is hoped his goodness in future time will not be forgotten by such as were any way concerned therein, or had advantage thereby.

This island (called Arowsick, from an Indian so named that formerly possessed it, and of whom it was purchased by one Mr. Richards, who sold it to Capt. Lake and Major Clarke) lies up ten miles within the mouth of Kennebeck river; it is some miles in length and contains many thousand acres of very good land; where meadow and arable ground are in a good proportion well suited together. Within the fort aforesaid, were many convenient buildings for several officers, as well for wares and trading, as habitations: six several edifices are said to have been there erected. The warehouse at that time was well furnished with all sorts of goods; besides a mill and other accomodations and dwellings, within a mile of the fort and mansion house; some inhabitants of which hardly made their escape upon the first surprisal of the fort.

All which considered, the loss that befel the proprietors at the surprisal of this island, seems to be very great, valued at many thousands; but those that were the owners, with others of late times, have found from their own experience, what Solomon said of old, there is a time to get, and a time to lose, a time to keep and a time to cast away; a time to break down as well as a time to build up.

The persons killed and taken at Kennebeck, at Mr. Hammond's and at Arowsick, are said to be 53.

Upon the report of the sad disaster, all the plantations of the English in those parts were soon after left, and forsaken by degrees. All the rest of the inhabitants of Kennebeck river, Sheepscot river, Sagadahock, and Damanicottee, fearing to be served in the same way, fled to the islands of cape Bonawagon and Damaril's cove.

On the second day at night a post was sent to Pemmaquid to inform them of what had happened, who being but eight or ten men, had a mind to go on the island called Monhiggon, having secured the best of their goods, but the wind taking them short, they were forced to turn into Damaril's cove where they found Mr. Wiswall, and Mr. Collicot; there they laboured two days to settle a garrison; but through the mutinous disposition of the people, and the want of provision nothing could be done to secure the Island, so that it was soon deserted. From thence they went to Monhiggon, resolving there to tarry till they heard from Boston, from whence Mr. Collicott and Mr Wiswall promised to do their utmost endeavour to send help. There they settled three guards and appointed 25 to watch every night not knowing but that the Indians might come every hour. But continuing there a fortnight, and finding no relief like to come, and seeing all the country burnt round about, (for after they had got all that could be saved from Pemmaquid, they saw all the other islands, Windgin's, Corbin's sound, New-Harbour, and Pemmaquid, all on fire in two hours time) then considering what was best to be done, they found no boats could be sent to sea for fear of weakening the island, and that most of those who were on it were strangers, coasters, and such as came from the main and ready to be gone upon every occasion, they laid an embargo for one week; after which a letter was received from Major Clarke, desiring their assistance in inquiring after Capt. Lake, if alive, saying, what could be had at Kennebeck, &c. but intimating nothing of any help like to come; besides, those that brought the letter told them it was in vain to expect any help from Boston, it being questioned there what they had to do with those parts. Upon which the inhabitants considered, that if they should tarry there and spend all their provision and neither be able to go to sea, nor yet to live or be safe ashore for want of help, it were better for them to remove while they had something to live upon, and seek employment elsewhere; so by consent they resolved forthwith to transport themselves and what they had saved of their goods, to some place of security, so they sailed the first opportunity, some for Piscataqua, some for Boston, and some for Salem, at one of which places they all safely arrived.

Having thus escaped at first, as Lot out of Sodom, but not counting themselves safe in that Zoar, where for a little while they made out to hide their heads, till they might escape to some sure place, there waiting for better times, when they may with peace and quietness return to their former habitations, or seek some other elsewhere.

When the aforesaid exploits were done by the Indians about Casco bay, several of the English removed to Jewell's island, where they hoped to be more secure from the Indians, but the barbarous enemy finding so little resistance made against them on the mainland, a considerable party of them came with their canoes to destroy the island, also, about three weeks after the aforementioned mischiefs.

There was a fortified house upon the said island, where the English that either kept upon the island, or repaired thither, hoped to secure themselves. But at that time the Indians assaulted the place many of the English were absent, and few left in the garrison but women and children. Some were gone to other places to fetch Indian corn, others were in a boat employed about fish, amongst whom was one Richard Pots with two more. The wife of said Pots was washing by the water side where she was surprised with her children; and carried away in sight of her husband, who was not a little distressed at that sad spectacle, but was incapable of affording any relief either to his wife or children. One of the little innocents espying his father in the boat, ran into the water, calling out for help; but an Indian was running after him to catch him up; the poor man in great agony, being within gun shot, was about to fire upon the Indian, but fearing he might wound or perhaps kill his child, which the villain had seized and was carrying off, he forbore, choosing rather to have him carried away alive, than expose him to the loss of his life or limbs, by shooting at the Indian.

It is said some of the Indians were killed by those in the garrison; it is mentioned that a lad at one shot killed two or three of them; some guns were found afterwards under the fort, which were supposed to have belonged to some of the Indians that were killed. Some that were abroad when the fort was assaulted, desperately broke in through the Indians, whereby at the last many people were preserved.—Some flying away to Jewell's island, in a canoe toward Richmond's island, met with a ketch, to which they made known the distress the people were in, thereupon went to the place and took all the people they found there, and carried them off to a place of more safety. Yet there were several persons said to be killed and carried away at that time, viz. three men, who were known to be killed, two woman and two children that are supposed to be yet alive, though in the enemy's power.

From thence they went to Spurwinks, where they assaulted one place, or more, and carried another away captive. Amongst those that were in danger of surprisal, one that could not run hid himself in a garden of cabbages, so that he was not found, yet was very near them, for he overheard several questions they asked him they took; by which means he was the better enabled afterward to prevent the danger two more were coming into, for the poor fellow they had taken, told them that one Gendal and another man, were to come that way by and by; whereupon this man that hid himself, meeting Gendal and the other man, gave them notice of the danger, whereby they were delivered out of the snare for that time. Not long after Mr. Gendal fell into their hands as shall hereafter be related. Within a while after the same time, another fatal accident befel six or seven persons belonging to Casco: For upon the 23d of September, some

persons that belonged to a sloop and a shallop, that were pressed into the service (one reason of which was to prevent their straggling, they being persons that belonged to those parts about Casco) were over desirous to save some of their provision, to which end they first made their address to Capt. Hathorne, (under whom they were ordered to serve) desiring they might be released; the captain told them he could not do it, but desired them to have patience for a while; they told him they must and would go, else their families would starve at home; the captain told them further of the danger, and bid them not stir at their peril. However, go they would, and soon after went to Mountjoy's island to fetch sheep where they landed seven men; but the Indians fell upon them, when they betook themselves to the ruins of a stone house, where they defended themselves as long as they could; but at last they were all destroyed either with stones cast in upon them or with the enemies' shot, except one who, though at the first it was hoped his wounds were not mortal, yet soon after died thereof. Amongst these was one George Felt, much lamented, who had been more active than any man in those parts against the Indians, but at last he lost his own life amongst them, in this too desperate adventure.

The Indians growing more bold by these attempts in those remote places, drew down nearer towards Piscataqua, for not long after a party of them came upon cape Nidduck, where they killed and carried away all the inhabitants of a few scattering houses, to the number of seven in all; and such was their savage cruelty exercised in this place, as is not usual to be heard of, for having dashed out the brains of a poor woman that gave suck, they nailed the young child to the dead body of his mother, which was found sucking in that awful manner, when the people came to the place. The day oefore a man and his wife were killed at Wells, and two more soon after. On the 12th of October following near 100 of the Indians made an assault upon Black point, all the inhabitants being gathered into one fortified place upon that point, which a few hands might have defended; but as it seems one called Mugg, was the leader of the Indians, one that had from a child been well acquainted with the English, and had lived some years in English families, who though a cunning fellow, and had succeeded much in his attempts, but as this time shewed more courtesy to the English, than according to former outrages could be expected from any of those barbarous miscreants, and was willing to make offer of a treaty to Mr. Josselin, chief of the garrison, to whom the said Mugg promised liberty for all that were there to depart with their goods upon the surrender of the place: The said Josselin reports that when he came back from his treating with Mugg, that all the people were fled away out of the garrison, having carried away their goods by water before his return, insomuch that having none but his household servants to stand by him, he was capable of making no resistance, and so surrendered.

When people have once been frighted with reports and sense of danger, they are ready to fly away like a hare before the hunter or his hounds; one of the inhabitants of the place affirmed he saw 250 Indians, which was more by an hundred than any body else ever saw near the fort. But when a place is consigned to ruin, every thing they take in hand shall tend that way.

The loss of Black point was accompanied with another sad accident that happened about the same time at Richmond's island: For young Mr. Fryer, with some others at Piscataqua, to whom it seemed grievous that the Indians should make all that spoil in every place in those plantations, ventured, upon the great importunity of Mr. Gendal, with a ketch, to try what they could save of such things as the Indians had left; but things were so ordered, that before they had loaded their ketch, coming too near the stage head, they presently found themselves in danger of a surprisal; for part of their company being ashore, seized by the Indians, or in danger thereof, whom they were not willing to leave behind; and besides the wind blowing in hard upon them they could not get out of the harbour, but were forced to abide the danger of an assault, the Indians getting many of them into the stage head, annoyed them so fast with their shot that not a man of them was able to look above deck, but he was in danger of being shot down; amongst the rest Mr. James Fryer venturing too much in view of the enemy, received a wound in his knee, which appeared not dangerous at first, but for want of better looking to than could be found amongst that black regiment, into whose hands he soon after fell, it proved mortal unto him within a few days after; he being by a strange accident brought home to his father's house at the great island in Piscataqua. Mr. Fryer being thus wounded the rest of the company defended themselves for a while with much courage and resolution till they were brought to the sad choice of falling into the hands of one of these three bad masters, the fire, the water, or the barbarous heathen, to whom at last they thought it best to yield in hopes of liberty afterwards, at least of lengthening out their lives a little longer for the Indians had manned out a canoe with several hands to cut their cable, and others stood ready within the defence of the stage head, by which means the vessel after the cable was cut, soon drove ashore; and then it was threatened to be presently burnt, if they did not all yield, to which they all at last consented.

The Indians, how barbarous soever in their own nature, yet civilly treated their prisoners, and upon farther discourse sent two of them to Piscataqua, to give them there an opportunity to ransom their friends. The persons sent home to procure a ransom, were to return with such quantity of goods as the Indians had desired, by such a precise time; but they that brought the things for their ransom, coming a day or two before the time, when those that sent them was gone up the river at Black point, and not returned: Some other Indians waiting for such an opportunity, seized the goods, at least that part which they most desired, and through mistake, killing one of the three men that brought them, dismissed the other two, without return of the prisoners as was expected.

As to what happened afterwards we are yet much in the dark, and for the present can write but by guess: For within a few days after the return of Mr. Gendal, and the other man that went to carry the ransom, before the 1st of November, Mugg himself came to Piscataqua, bringing Mr. James Fryer, who soon after died of his wound; one of the prisoners along with him complaining that without his knowledge some of the Indians had seized what was sent for the ransom of the rest, promising upon his faith, that he would make good his word for the sending home all the prisoners, and offered also in the name of the other Indians to confirm a new peace with the English for the future. The major general of the Massachusetts colony was then at Piscataqua, but not willing to transact a matter of that nature and moment by his sole authority, ordered the said Mugg (supposed to be the chief leader of the Indians) to be carried down to Boston to the governor and council there, to conclude the business, with whom he soon after agreed upon a firm peace with the English of Massachusetts, in the name of Madockawando the chief of all the Indians in the eastern parts about Penobscot, engaging also to remain himself as hostage, aboard the vessel (in which he was sent home from Boston, the 21st November following) until the prisoners (which are said to be fifty or sixty) that they have still in their hands be sent home, and the rest of the articles performed; the issue of which we as yet wait to hear in God's good time, this 12th day of December following, 1676, when they there have made an end of the reckoning, it is hoped we may have our rights again.

There are two principal actors amongst the Indians that have all along promoted these designs amongst them, one named Squando, sagamore of Saco, and the aforementioned Madockawando, the chief commander of the Indians eastward about Penobscot, who are said to be by them that know them, a strange kind of moralized savages; grave and serious in their speech and carriage and not without some show of a kind of religion, which no doubt but they have learned from the prince of darkness (by help of some papist in those parts) that can transform himself into an angel of light, under that shape the better to carry on the designs of his kingdom. It is said also, they pretend to have some visions and revelations, by which they have been commanded to worship the great God, and not to work on the Lord's day. We know where that fountain hath its rise, that sendeth forth at the same place sweet and bitter waters; and from whence their hearts are inspired, that join blessing of God with cursing and killing his servants.

It is reported by some that came lately from those parts, that the Indians there as yet refuse to have any peace with the English, and will not as yet return any of our captive friends till God speak to the aforesaid enthusiasts, that are their leaders, that they should no longer make war with us, and the like.

But not to trouble ourselves farther with those ministers of Satan, or those that are actuated by the angel of the bottomless pit, who possibly since their delusions are but twofold more the children of hell than they were before. We know better how to understand the mind of the great Lord of heaven and earth, than to depend on such lying oracles.

That God who hath at present turned their hearts to hate his people, and deal subtly with his servants, we hope in time, will either turn the stream, and cause them to deal

friendly and sincerely with his people as heretofore, or give us an opportunity to destroy them.

In the next place it remains, that some account be given of our forces, under Capt. Hathorne, and of their several expeditions into the eastern parts, since the middle of September last; first up towards Casco, by the sea side, then afterwards through the woods, directly northward, toward Ossapy and Pigwauchet, in hopes to have found the enemy at their head quarters.

Upon the first report of those devastations and spoils that had been made by fire and sword in those eastern plantations it was judged necessary to send some forces that way to put a stop to the current o those outrages, before the remainder of the southern Indians could have an opportunity to join with them: To that end about 130 English, with forty Indians, were despatched away into those parts, under the command of Capt. William Hathorne, Capt. Still, and Capt. Hunting, who were to join with such as could be raised in those parts, under Major Waldern and Capt. Frost. After they had surprised the Indians that flocked into those parts, (as was related before) which was done upon the 6th of September, 1676, Capt. Hathorne, who was commander in chief, marched the forces by the sea side, towards Casco: For at that time they were upon some demur whether to march directly toward Ossapy and Pigwauchet, where the head quarters of the enemy was supposed to be, or else to march directly toward Casco bay where they heard parties of the enemy were daily spoiling the plantations of the English; the last it was judged the most expedient to try if they could not meet with some parties of the enemy amongst those plantations near the sea side, by that means at least to prevent them from doing more mischief, if they could not find an opportunity to fall upon some of them and destroy them; but their time was not yet come, nor were all the desolations as yet accomplished, which God had a purpose to bring about by their means: For notwithstanding there was a sufficient force to have suppressed all the numbers of the enemy, if they had been many more than they were, yet being emboldened and grown subtle by their former successes, they had so dispersed themselves all about the woods in those parts, that when our forces were in one place, they would be in another, and so did much mischief thereabouts, while our soldiers were out after them: For after they had by several steps in ten days time got to Casco from Newechewannick (about the 9th of September) they marched to Wells and from Wells to Winter harbour, and so from thence to Black point they passed by water, and then arrived at Casco bay, about the 20th of September, yet about that very time were several of the English cut off at Mountjoy's island, and that in sight of our forces, when they were not able to come at them for want of boats the island lying two leagues off in the bay; this happened the 23rd of the same month as was said before, and within two days after another party of the enemy were doing mischief at Wells and cape Nidduck, and yet escaped away when they had done.

Nor could our forces in all the expedition meet with any of them but two; one of which soon after he was taken was let go by the treachery or carelessness of them that held him. For when our forces were come within a few miles of the hither side of Casco bay, some of our Natick Indians under Blind Will (a Sagamore of Piscataqua, who went in company with 8 of his men, supposed to be good pilots for the places more eastward) met with some of the enemy, and laid hold of a couple of them; justice was done to one of them; the other, although he was led by two of Blind Will's Indians, they made shift to let go, who escaping, got over a river and gave notice to the Indians who were on the other side, and were heard but a little before threshing in a barn that belonged to Anthony Bracket, whom they had lately surprised. Another disappointment our forces met with about the same time: for when Capt. Hathorne was up at Casco bay with his soldiers, he never could come up with the Indians, either through want of skill in them that were his scouts, or rather want of faithfulness in one that should have been his guide, who had got his living by trading with the Indians, therefore seemed unwilling to have the brood of them destroyed, as was known afterwards; and by that means a party of the enemy escaped the hands of our soldiers. Yet it pleased God at one time to bring the forlorn of our forces upon a party of the enemy, who espying the English presently fled away into the woods like so many wild deers; yet one of them, viz. J. Sampson, who had been of the company that killed Robinson the year before, was by the special hand of divine justice, suffered to fall by some of our forces; he was a very lusty, stout man, and one that was armed with several sorts of weapons, but there is no weapon shall defend them whom death hath a commission to destroy; there is no ransom in that war. The rest of the Indians that were scattered about Casco bay having discovered our forces made their escape; but we hope their time is short, and that God will find some way to cut off the bloody and deceitful enemies of his people, and not suffer them to live out half their days.

But by one such accident or other, our soldiers could not meet with any of them that had done the mischief in those parts. While our forces lay about Casco bay, a small party of the enemy came down upon the borders of the town of Wells, where they lay in ambush near a garrison house at one end of the town, and shot Mr. James Gouge from his horse, on Lord's day, Sept 24th, as he was going home from meeting, and then knocked down his wife, giving her several wounds with their hatchets about the head, of which she died in three days after.

The next day, Sept. 25th, the same party, being not more than seven in number, went toward York, and surprised Capt. Nidduck in a most barbarous manner, killing most of the poor people belonging thereunto. Some of their neighbours hearing the guns, came to their rescue; the Indians being on the further side of the river, dared them to come over and fight with them man to man, using many reproachful expressions, and making a shot at them, which some of the company not being able to bear, did very resolutely adventure through the river after them; but they were not willing to try the valour of the English, when they perceived they found a way to pass over the river upon them, but returned back toward Wells, where they killed one George Farrow, September 27th, as he was too carelessly venturing to his house without any company. These things happened while our forces were at Casco, where they tarried seven or eight days; and hearing of these outrages committed in some of those places which they left behind them, and not being able to meet with any of them in the place where they were, they returned back toward Wells and York; but the Indians were escaped away into the woods after their companions before they came there. Our soldiers having thus spent much time and pains in a fruitless expedition toward Casco, resolved to venture another march after them up towards Ossapy, supposing they might by that time be drawn homewards towards their winter quarters; or else that they might destroy what they had left behind them, to prevent their harbouring there for the future: But it seemed good to him, who by his sovereign power and infinite wisdom ordereth all events and purposes (wherein his people or others are concerned) to disappoint all endeavours used at that time for the suppressing of the enemy, or putting any stop to their wonted successes; for soon after our forces were returned back from Casco, news was brought of the surprisal of Black point, on the 12th of October, as was mentioned before; which notwithstanding it was judged more advisable to venture and proceed on with the expedition towards Ossapy, (whither it was supposed by this time the greatest number of them were retired) rather than to return back again to recover Black point, where was nothing to be expected but an empty fort, and some deserted houses, which it seems the Indians had forsaken by that time. And besides, that other forces were about the same time ordered to repair thither, sufficient for the repairing and securing the place, with what else was left remaining from the hands of the enemy: And likewise several soldiers were ordered to garrison the towns thereabouts, to prevent them from making any further assault upon them. However, they were so far emboldened by the taking of Black point, and the ketch at Richmond island that a party of them came the very next week after towards Wells, hoping to attain that, and all the towns and places between Casco bay and Piscataqua, as they had done Black point: For a party of them under Mugg their chief leader, brought Mr. Gendal along with them to Wells, where they summoned the first garrison at the town's end. To facilitate the business, they sent the said Gendal as their agent or messenger to move them to surrender without hazarding an onset; but the people were not so despondent as to yield up the place upon so slight an occasion; which when the enemy discerned, they soon drew off, after they had done some little mischief to the inhabitants; for first they killed Isaac Littlefield not far from the garrison; it is said they would willingly hav had him yield himself prisoner, but he refusing, they shot him down, yet they were so civil as to suffer his friends to fetch away his body without offering any further act of inhumanity to it, or hostility towards those that carried it off.

An old man called Cross, was likewise kil-

led by them about the same time; and another whose name was Jacob Bigford, belonging to the garrison, was so badly wounded that he died soon after. Thirteen head of neat cattle were also killed by them, out of which (through haste) they only took the tongues leaving the bodies whole to the owners, unless it was the leg of one of them, which was also taken away.

This was all the mischief done by them after the taking of Black point. The inhabitants of Winter harbour, near adjoining thereto, being alarmed with the surprisal of the other place, fled away with their goods for a time until they heard the enemy were moved farther eastward, and then it is said they returned to their place again. In this posture have things remained ever since in those eastern plantations between Piscataqua and Casco bay.

But our forces under the command of Capt. Hathorne and Capt. Still, having at last obtained all things necessary for a winter march into the woods, did upon the first of November following, set out towards Ossapy, where, after four days march of a very difficult way, over many rivers, not easy to pass at that time of the year, they arrived; but found not an Indian either there or in the way as they marched along. The Indians belonging to those parts had not many years before, hired some English traders to build them a fort for their security against the Mohawks, which was built very strong for that purpose, fourteen feet high, with flankers at each corner; but this time the soldiers intending to disappoint them of their refuge, made fuel thereof, which at that time was very needful for our people who had marched many miles through a deep snow in a very cold season, when they could hardly keep from freezing as they passed along, so early in the winter. None of the enemy being to be found there in the strongest fort, it was not counted worth while for all the company to march any farther; wherefore a small party being sent up eighteen or twenty miles farther northward amongst the woods, where as they passed along they met with many vast lakes, (supposed to be the cause of the sharpness of the cold in that side of the country) making the place scarce habitable for any besides those savages that used to hunt thereabouts for moose in the winter, and beaver in the summer; but at this time it is supposed they were all gone lower, towards the sea side, to share the spoils of the English plantations lately surprised by them, which is all the reward they have met with, who in former years for the sake of a little lucre by traffic with them, have run themselves there into the very jaws of destruction, either by irregular dealing with them or by their too much confidence in their deceitful friendship.

The 9th of November, our forces having spent nine days in this service, returned safe to Newechewannick from whence they set forth at first, having run more hazard of their limbs by the sharpness of the frost, than of their lives by any assault from their enemies.

There was a great probability that the design might have had some good effect if Mugg did not much abuse those he fled unto, with proffer of peace; for he told them that there were about an hundred about Ossapy not many days before. But it becomes us to look beyond second cause in events of this nature and conclude that God had raised up their barbarous enemies to bring a like chastisement upon the English in this side of the country, with that which others had endured elsewhere in the end of the former and beginning of the present year.

Things were so ordered by the providence of God, that the vessels before mentioned, arrived safely at Penobscot in the beginning of the month, where they found the said Madockawando, who was ready to confirm and make good the articles of the peace concluded at Boston by his agent in his name; and was willing also to deliver all the prisoners that were then in his power, or under his command, which were but eleven, who were taken in the vessel at Richmond's island, the 12th of October last. The said Mugg likewise being sensible of the obligation he lay under to make his word good, did venture to go up himself to another plantation of the Indians, where we supposed some more of the English prisoners were, to see whether he could obtain a release, as also to persuade the rest of the Indians thereabouts to join in the confirmation of the peace: It appeared to the persons belonging to the vessel that the said Mugg went with reluctancy, and fearing the Indians he was going amongst, would either kill him or keep him in prison; to which end, he ordered the command belonging to the vessels, to tarry for him about three days, or four at the most, assuring them that if he did not return by that time, they might certainly conclude that either his life or liberty was taken from him; however, the vessels tarried about or near a week beyond the time limited in expectation of his coming; but after so long a stay, they neither seeing nor hearing for him, were ready to fear the worst, viz. that his countrymen had made him sure, from having more to do with the English, whereupon for fear of being shut up by the sharpness of the winter from returning themselves, they took the opportunity of the next fair wind, of setting sail for Boston (only turning into Pemmaquid, to see if they could hear any further news there) where they arrived with such prisoners as were freely delivered by Madockawando, the 25th of December following, anno. 1676; amongst which prisoners, besides the two aforementioned, who were found at Penobscot, there was a third, by a more remarkable providence than ordinary, added unto them, Mr. Thomas Cobbet, son of that reverend and worthy minister of the gospel, Mr. Thomas Cobbet, pastor of the church at Ipswich, a town within Massachusetts jurisdiction, who had all the time of his son's captivity, together with his friends, wrestled with God in their daily prayers for his release, and accordingly he was with the more joy received by his friends, as an answer and return of their prayers. The said young man has lived with Mr. Fryer, merchant, of Portsmouth, for some years before, and had been often at sea with Mr. James Fryer the eldest son of the said merchant, and who had after much experience of his faitfulness, dexterity and courage on all such accounts, borne him so much respect, that when he was urged by his father to go along with Mr. Gendal as was said before, he would not venture unless his friend Thomas Cobbet would go along with him; which service he only for his friend's sake accepted, which proved a fatal adventure to Mr. James Fryer and might have been to the other also has not God otherwise disposed of him, having as is hoped, more serving in the land of the living. Amongst all the prisoners at that time taken, the said Thomas Cobbet seemed to have had the hardest portion; for besides the desperate danger that he escaped before he was taken, first by a bullet shot through his waistcoat, secondly by a drunken Indian; who had a knife at his throat, to cut it, when his hands were bound, when the Indians came to share the prisoners amongst them he fell into the hands of one of the ruggedest fellows, by whom within a few days after his suprisal, he was carried first from Black point to Sheepscot river, in the ketch, which the Indians made to sail in, in the said river, from whence he was forced to travel with his pateroon, four or five miles over, and to Damariscottee, where he was compelled to row or paddle in a canoe, about fifty miles farther to Penobscot, and there taking leave of all his English friends and acquaintance, at least for the winter, he was put to paddle a canoe up fifty or sixty miles farther eastward, to an island called Mount Desert, where his pateroon used to keep his winter station, and to appoint his hunting voyages: and in that desert like condition was the poor young man forced to continue nine weeks in the service of a savage miscreant, who sometimes would tyrannize over him, because he could not understand the language and for want therefore, might occasion him to miss of his game, or the like. Whatever sickness he was subject to, by change of diet, or on any other account, he could expect no other allowance than the wigwam will afford: If Joseph be in the prison, so long as God is with him there, he shall be preserved, and in due time remembered.

After the end of the nine weeks, the Indian whom he was to serve, had spent all his powder, whereupon on a sudden he took up a resolution to send this young man down to Penobscot to Mr. Casteen to procure more powder to kill moose and deer, which it seems is all their way of living at Mount Desert; the Indian was certainly overruled by Divine Providence in sending his captive down thither for a few days before, as it seems, after the Indians in that place had been powawing together, he told him that there were two English vessels then come into Pemmaquid, or Penobscot, which indeed proved so; yet was it not minded by him surely when he sent his captive thither for powder, for it proved the means of his escape, which his pateroon might easily have conjectured, if it had not been hid from him. As soon as he arrived at Penobscot, he met with Mugg who presently saluted him by the name of Mr. Cobbet, and taking him by the hand, told him he had been at his father's house (which was the 1st or 2d of November before, as he passed through Ipswich to Boston) and had promised to send him home, as soon as he returned. Madockawando taking notice of what Mugg was speaking that way, although he was willing he should be released according to agreement (his pateroon being one of this sagamore's subjects, though during the hunting voyage of the winter, he lived at such a distance from him) began to demand something for satisfac-

tion, in a way of ransom, not understanding before that his father was a great preachman, as they used to call it; Reply was made him that he should have something in lieu of a ransom, viz. a fine coat, which they had for him on board the vessel; which the sagamore desired to see before he would absolutely grant a release; but upon sight of the said coat seemed very well satisfied, and gave him free liberty to return home. Whilst this Mr, Thomas Cobbet was a prisoner at Mount Desert, going along with the Indians to hunt on an extreme cold day, he was so overcome with the sharpness thereof, that all his senses were suddenly benumbed, so that he fell down upon the snow, not being able to stir hand or foot, and had without doubt there perished in a little time, but the Indians he was going along with, missing him presently, ran about the woods to seek him, and when they found him, they were so pitiful to him, or so careful of their own good, as not to cast away a likely young man, from whom they expected either much service, or a good ransom, for want of a little care and pains to preserve his life; wherefore taking him upon their shoulders, they carried him into the next wigwam, so that he soon after revived, and came to himself again, without any farther mischief.

At another time, the savage villain, whose prisoner he was, so long as he had strong liquor, for five days together was so drunk he was like a mad furious beast, so that none durst come near him, his squaw he almost killed in one of those drunken fits.

The said Thomas to get out of his sight went into the woods for fear of being injured by him; where making a fire, he kept himself alive; the squaws being by God's special providence so inclined to pity, that they came to him daily with victuals, by which means he was at that time also preserved; all which put together, makes his deliverance the more remarkable, as an answer of prayer.

As for the rest of the prisoners (which are said to be 50 or 60) they were left with those who first suprised them at Kennebeck and Sheepscot river: The women were employed it seems to sew, and make garments for them; they having plundered many Engish goods at Arowsick. They are so much elated with their late successes, in spoiling so many English habitations, that they seemed not very ready to hearken to terms of peace, as their sagamore Madockawando doth desire: Nor are the English able to come near them with any of their forces this winter season, in regard both of the remoteness of the place, and sharpness of the cold, which used to be extreme in those parts. How their hearts may be inclined in the following year, or what the English may be enabled to do against them, is known unto God only, on whom we desire to wait for a confortable issue of these our troubles. But until they have spent all the plunder that is taken, it is no doubt, but they will seem averse from having peace; as others to the westward did, whose hearts were hardened against all proffers of that nature, till they were destroyed; possibly some remnants of them that escaped in those other parts, are got hither amongst these and do animate them all they can to hostility against us, till they make these as miserable as themselves, and so forced at last to fly from their country Many have been the troubles we have met with from these barbarous neighbours round about us, but God we trust will deliver us out of them all as he hath promised to do for the righteous, who may in the darkest night of affliction say light is sown for them, which shall spring up in the appointed time thereof.

No further news came to hand concerning the English prisoners at Kennebeck, after the return of Capt. Moore, from Penobscot, till the 5th of January; when one Francis Card, with another young man, formely an inhabitant of some place about Kenebeck, or of Arowsick (but then the prisoner with the Indians) made an escape from them, and got over to Casco bay, and then to Black point, from thence he was conveyed to Piscataqua soon after, and then to Boston.

The manner of his escape, as he reports, was this: He was employed by the Indians to thresh corn at a barn a little lower in the river, than the place where the Indians commonly kept; being trusted alone, to go and come of himself, because there was no suspicion of any coming to carry him away, or seeming possibility to get away without being discovered, he found means to plot with another young man, who was sent to look for horses, whose flesh it seems is by those wild savages preferred before the best beef, so that having their choice of both, they took what they liked best. This being the employment of the young man, he had the better opportunity when he was in the woods to make a contrivance to get away. Thus being resolved upon their design, they provided necessaries accordingly, and sent such a message home to their masters, as might occasion them not to expect them very soon that night. Thus resolved, they marched away as soon as they perceived the coast was clear; and having provided a canoe accordingly fit for the design, by the help of which they got over the water by which they were to pass, which was not frozen; and in the night time turned into a swamp, where they might make a fire to keep them from suffering with the cold without being discerned; so that within two or three days they recovered the fort and garrison at Black point, from whence they were soon conveyed to Boston.

This Francis Card made his relation of matters when he came to Boston, viz. that the prisoners which he left behind were well, and not much ill used, only put to do the servile work about the Indians. Woe must it needs be with Christians, when put not only to sojourn, but to serve in those tents of Kedar. Such of the women as were skilled in knitting and sewing were employed to make stockings and garments for their pateroons: so it seems the ware-house at Arowsick furnished them with cloth, stuff and linen, and the inhabitants served for artificers to cut it out and make it up.

He reported also that the Indians spake nothing of any peace; but rather being heightened with their late and great successes, were contriving how to get possession of the other places in the hands of the English on that side of the country, which God forbid should ever come to pass; but finding so easy work of their former exploits, they hope to accomplish their purposes, with the like facility in all other places where they come.

It seems Squando is their chief leader, that enthusiastical or rather diabolical miscreant; who hath put on a garb of religion, and ordered his people to do the like; performing religious worship amongst the Indians in his way, yet is supposed to have very familiar converse with the devil, that appears to him as an angel of light in some shape or other very frequently. This Francis Card also affirmeth, that there is not so great a number of Indians as is herein reported; for he saith, when they were going out upon some design while he was in their hands, he had opportunity to count them all and could find but 98 of them that were men; neither could he discern that there were any of the western Indians unless Simon and Andrew, that formerly escaped out of Dover prison: although it was before apprehended there were multitudes of them flocked thither.

Francis Card's declaration of their beginning, August, 14th.,

The Indians come to Richard Hammond's and there killed Richard Hammond, Samuel Smith, and Joshua Grant, there parting their company, eleven men came up Kennebeck river to my house, and there took me, and my family. Therefore the rest of their company went to Arowsick and there took the garrison: About a fortnight after, they came down Kennebeck river, and so went down to Damaril's cove, and there burnt houses and killed cattle; then coming back parted their company; one party went to Jewel's island, and the other party went to Sagadahock, being in number 81. Those that went to Sagadahock took a shallop; from thence came to Kennebeck river, and then went to killing and destroying of cattle and houses; for they had intelligence of a ketch and a shallop at Damaril's cove, and going there they took the shallop, and killed two men, being in the number about 80. The next day made up their forces went about to Black point being about 120 fighting men, and are now in two forts about 60 at a place, with six or eight wigwams between the two forts.

Now the best place to land men is in Casco bay, and in Kennebeck river; the one place being eight, the other about fourteen miles from the fort where I was kept; and if the army do not go with speed, they will be gone forty miles farther up in the country. At the first taking of me they carried me up to Taconnet, and the men coming down, they brought me and two more men down for fear of our killing their women and children; for they kept their women and children at Taconnet all the summer. As soon as the warm weather doth set in they do intend to go away to Taconnet, and there to build two forts, for there is their fishing places and planting ground. Squando doth inform them that God doth speak to him, and doth tell him that God hath left our nation to them to destroy, and the Indians take for truth all that he tells them; because they have met with no affront. Now Mugg the rogue, being come again to the fort, doth make his brags, and laughs at the English, and saith, that he hath found the way to burn Boston, and doth make laughter at your kind entertainment; they make their brags how they do intend to take vessels, and to go to all the fishing islands, and so drive all the country before them; reckoned to be a

great number in the spring. There are a great many Indians at Canada that have not been out this summer, both of Kennebeck and Damarascoggin, therefore a great many of these Indians at Kennebeck do intend to go to Canada in the spring to them, and they do give gifts both of captives, and of goods to the eastern Indians, to have them go with them; but as yet I do not know what they will do, for Madockawando and Squando are of several judgments, and so have parted and Madockawando doth pretend love to the English captives as civilly as we can expect by such a people. That this is a truth, is declared by me Francis Card, the 22nd of January 1679.

By the report which he brings it does not appear so difficult a matter to make an attempt to recover the place and destroy them that hold it, as was before apprehended: Insomuch as that design that was under debate before the governor and council a little before and was let fall for the present, as a matter not feasible, hath since been set on foot with a fresh resolution: And another thing also occurred about the same time which put new life into the said design, viz. an apprehension that there were several of the Naragansetts scattered about in these woods near Piscataqua, who it was feared might join with those of Kennebeck in the spring, and so come down upon the English plantations, and spoil them all that were thereabouts. For soon after Francis Card came to Boston, some of Major Waldern's Indians at Quechecho, as they were hunting in the woods, chanced to meet with three strange Indians, two of which had guns, but those of Quechecho were without. The other Indians began to have a talk with them, to see if they could make way for their acceptance with the English; Those Indians that this motion was made unto, in a most perfidious manner gave them encouragement in the business, and appointed a place where to meet them the next day, saying they could not have them go home with them to their wigwams lest their women and children would be frighted with the sight of their guns; all which spoken upon a treacherous account, by that means to betray them, for they had neither women nor children at their wigwams; but not having guns themselves, as the others had, they durst not then seize upon them. The next day therefore, according to appointment, their guests expecting a treaty and a friendly compliance (yet coming apart as was ordered the day before to be the more easily surprised) arrived at the place appointed and there presently the first, being thus treacherously brought into the snare, was despatched out of hand. The like was also done to the second. The third was at a distance, but he either discerned or suspected what became of his fellows, and therefore made the more haste to escape, but his deceitful friends were too quick for him, who shot him down before he could get out of their reach; so that they took him alive, as is said; but he could not live much longer by reason of his wounds. The Quechecho Indians cut off the scalps of their poor countrymen (which is their usual manner when it is too far to carry their heads) which being brought to Major Waldern, they were presently discerned to be Narragansetts by the cut of their hair. This instance is a sufficient evidence of the subtlety, guile and falsehood, natural to all these Indians, and may satisfy any rational person, what little trust there is to be put in their words, promises or engagements, though ever so solemnly made, farther than they that make them, for advantage in the keeping and performing. Subtlety, malice and revenge, seems to be as inseparable from them, as if it were a part of their essence.

Whatever hopes may be of their conversion to christianity in after time, there is but little appearance of any truth in their hearts at present, where so much of the contrary is so ordinarily breathed out of their mouths.

These manners of the Gentiles in former times, while they remained children of disobedience, until they were renewed after another image: Nor are these incapable subjects for divine grace to work upon; yet are there some natural vices proper to every nation in the world, as Paul speaks of the Grecians, from the testimony of one of their own poets.

But to return. These things so concurring and several gentlemen from about Piscataqua repairing to Boston, so represented the state of things eastward before the governor and council, that it is apprehended not only necessary, but feasible also to suppress the aforesaid Indians in those parts: Whereupon it was forthwith concluded that an expedition should be made against them; to which end 250 soldiers, whereof about 60 were of Natick Indians, who had given good proof of their value and faithfulness to the English; all which were immediately despatched away the first week in February, by water under the conduct of Major Waldern, as commander in chief; a person well approved for his activity, as well as fidelity and courage in matters of this nature. They had to encounter with rough and contrary winds, and much cold weather the first week after their setting out; but having so much experience of the favour and goodness of Almighty God, who is always wont to be present with his servants in like cases, though he hath often for a time deferred, for the trial of their faith and exercise of their patience, yet useth not to fail his people, that put their trust in him, being appointed for that end, to which we expect a comfortable answer. We that have sent forth our friends on the public service, being thus engaged to follow them with prayers, at present in silence wait upon the Lord of Hosts to give a blessing to the design; hoping our friends in this necessary, though difficult service, thus called forth, have gone out with the like encouragement and resolution that sometimes Joab did. Let us be of good courage, and play the men of our people, and for the cause of our God. And let the Lord do that which seemeth him good.

Upon the 11th of February, two Indian squaws that had run away from Major Waldern's in the beginning of winter, out of discontent, because the husband of one of them, and some of the relations of the other were sent away, came back with more wit than they carried away with them, though with less flesh upon their backs; having wandered up towards Pigwauchet, till they were almost starved there. They say some of the Indians were seen by them, pretending they were going to the head of Connecticut river, with hostile intents against the English; but they going away in the manner before described, little heed is to be given to the stories they tell on their return.

The 19th of February following, John Abbot, the master of Mr. Fryer's ketch taken October 12th at Black point, came into the isle of Shoales, having made a desperate adventure to escape. He gave a more probable account of things in those parts.

He saith they first carried to Seeepscot river, where the vessel in which they were taken was moored all the winter; in which time the Indians have spent all their ammunition and most of their provision, thought it high time to be looking out for more; to which end they caused the said Abbot to fit up the vessel (being a pinnace of about 30 tons) as well as he could, with such assistance as they could afford him; and ten of them shipped themselves in the same, intending for Penobscot; from thence to sail up that river as far as they could; and then leaving their vessel to proceed on with their canoes as high up the river as the stream would permit, and so to pass on to Canada, to buy powder of the French there; it being at this time thirty two shillings a pound amongst the Indians at Kennebeck. But as Providence ordered it, after these mariners launched into the deep a small storm with a contrary wind began to rise; of which the English skipper found ways in his steering to make the danger seem more than really it was, insomuch that they resolved to put in at cape Bonawaggon, three leagues to the eastward of Sheepscot, where eight of them went on shore, leaving two Indians on board with the English skipper. After he had got so well rid of them he contrived how to get clear of the others also; therefore he persuaded them that the vessel would not ride safely in that place, so that he prevailed with them to let him go to another harbour called Damaril's cove, two or three leagues more eastward. In the way as he sailed he so ordered his steering that sometimes the waves were ready to overtake the vessel, which put his two Indians into a fright, so that they made all the haste they could to get ashore, as soon as they come within the harbour, urging him to go along with them; but he pretended a necessary excuse to stay behind to look after the vessel but with intent as soon as he should see them ashore, to hoist sail for some English harbour, having no body on board with him, but a small English child about three years old. It seems the Indians had a child or two of their own dead in the vessel, who died after they began their voyage, they were the forwarder to go on shore with them for burial. The said Abbot now perceiving he had obtained his purpose (for he resolved on this project before) first greasing the mast with a piece of fat pork left by the Indians, as high he could reach, that he with his own hands might the more easily hoist the sail, so choosing rather to cast himself upon the Providence of God on the waters, than to trust himself any longer with the perfidious savages on the dry land; he came safe to the isle of Shoales before the evening of the next day, the 19th of February.

Within a few days after John Abbot aforesaid made his escape in the vessel, there came an express from Major Waldern (the commander in chief over our forces sent to Kennebeck to subdue the Indians in those parts,

and deliver the English captives that have been detained in their hands since August last) which giveth this account of their poceeding.

Feb. 17th. This morning the wind north-east, soon after south and south-west, we set sail with our vessels from Black point, for Portland, but on the east side of cape Elizabeth, we espied John Paine (who was sent out a scout) who brought word the way was clear of ice and Indians; whereupon we steered for Mary point at the head of Casco bay, and got there this night, but too late to get to the fort before morning.

Feb. 18th. We sent this morning our scouts out by land, who returning about 8 o'clock, brought word they saw the tracks of three Indians, and found a birch canoe at Muckquit, about four miles off, by which we feared we were discovered; the companies about four o' clock were drawn forth, and just beginning their march when we espied five of the enemy about half a mile off; they landed over against us on an island, and hollaed to us, whereby we perceived they desired a treaty; hoping to gain the captives, we sent John Paine to them, they promised him to bring the captives by morning and desired peace. After this John Paine was sent again, and stayed among the Indians in the room of Simon, who came to the major. He was questioned, and answered as follows.

Quest. How came you to know we were here?

Ans. We continually kept out our scouts, and yesterday our Indians left a canoe at Muckquit, which this day we missed, and perceived the English had taken it, and our men that left the canoe espied you a great way off at Portland.

Quest. Why did you break your covenant with me?

Ans. Blind Will stirred us up to war here, and said he would kill you at Quechecho. Simon having said this, asked the major what his business was here, to whom it was answered, we came to fetch off the captives and make war as we see good. Simon also told us that the captives were all well, that we should have them by morning, that Squando was there, and would give the captives to Major Waldern; that they intended peace, and had sent to Boston before now, but that Mugg told them that the English would be here shortly.

The major upon this dismissed Simon, and sent for Squando, to which Squando answered he would meet him half way if he would come alone in a birch canoe. To this the major answered, he would not venture himself in one of their leaky canoes, and that if he had no more to say, the treaty was ended: To this Squando answered, he would be with us again at ten o'clock, and bring the captives.

Feb. 9th. Wind north-east, the weather thick: About noon we discovered a party of Indians in fourteen canoes about three miles above us in the bay; they landed on a point of land, and burnt one English house and shouted to some of our men that were scouts, challenging them to fight: Immediately on the return of our scouts we marched against them as secretly as we could; upon sight of us they fled; but Capt. Frost came upon them with his whole body before they were half out of gun shot. In this skirmish we judged we killed and wounded several of them without any damage, yet some of their bullets hit some of our men. For the captain's sake immediately after this we hung out a flag of truce and the enemy did the like. John Paine was sent to them to demand the reason why they fired the houses, and broke their promise.

Simon met him half way, and answered, the house was fired accidentally without order fom Squando; that they had sent for the captives who were a great way off, and the foul weather hindered their coming: He questioned John Paine also why we fought them while we were in a treaty.

Paine answered, they broke it themselves in not performing their promises, challenging our soldiers to fight; the latter Simon denied, and answered the other as before: Simon told him they had two men wounded, and expected satisfaction, but also promised the captives the next day and so left us.

Feb. 20th. The wind north-east, and snow, it was resolved to sail for Kennebeck the first fair wind, whither we had immediately gone upon our knowledge that we were discovered by the enemy, but that the wind and weather hindered us hitherto.

Feb. 21. This morning the wind north-west, we set sail for Kennebeck, and arrived at the harbour's mouth at four o'clock. About sun set we set sail up the river, and got to the lower end of Arowsick.

Feb. 22d. We set sail this morning but could not get to the head of the river for ice, whereupon we landed our soldiers at two o'clock about twelve miles off Aboundessit fort, and immediately began our march; at 8 o'clock at night came to the fort; we found no Indians, there we took up our quarters this night.

Feb. 23d. We sent out scouts to discover the march of the enemy, but found so many tracks every way, that we knew not what way to follow them. At a council of war it was resolved that Major Waldern should sail for Penobscot, with two ketches, and part of the soldiers to seek after the captives, and fight the enemy if he had opportunity; the rest to build a garrison. In the absence of our forces, the vessels espied several fires below the river, and one English house was burnt; about sunset the soldiers returned to the vessels.

Feb. 24th. This morning the major with two boats and a shallop, went to spy out a place to settle a garrison, and found one against the lower end of Arowsick island and the vessels are brought to it.

Feb. 25th. We rested here this sabbath.

John Baker's house opposite the lower end of Arowsick being judged the most convenient place for their purpose, as well for the conveniency of water for the soldiers, as for a cove wherein ships might ride, within command thereof, the vessels therefore were immediately anchored there, where they rested on the Lord's day, February 25th.

Next day according to the advice of the commanders, Major Waldern embarked 60 men in two vessels, with which he set sail immediately for Penobscot, leaving the rest to be employed in making preparation for settling a garrison in the said place.

In their way off from Gyobscut point they espied two Indians in a canoe, that waved their caps as if they desired to speak with them. John Paine and Walter Gendal were presently sent; they gave them intelligence that many Indians were at Pemmaquid with the English captives, upon which they bent their course thither; when arriving, they anchored at four o'clock the same day; soon after two Indians halloed to them from Mr. Gardner's fort. John Paine was sent ashore to enquire who they were, and what was become of the captives. Sundry sorts of Indians were found about the place with several sagamores, the chief of whom was Mattahando, who told them he was glad to see Englishmen there and that he desired peace, and promised to deliver such captives as were at Penobscot, the next morning; adding also, that he desired to speak with Capt. Davis. After John Paine returned to the major, he was sent back with the said Davis and stayed ashore till three sagamores went on board, and signified as much to Major Waldern, as they had before to John Paine. While they were in discourse, an English captive was espied in a canoe with his pateroon, with whom they desired to speak, but it was not granted at that time he being carried farther up the river out of sight.

Soon after the major went on shore with six men, yet carrying no arms with them. He found their words smoother than oil, yet were there drawn swords in their hearts, of which some of their actions gave no small ground of suspicion; for they deferred all till the next morning; nor were they willing to let the man that was espied before in the canoe come on board to see his friends without leaving an hostage in his room, of which the major was very glad, that he might have opportunity of a little discourse with one whom they might trust. When they returned from the shore the sign was promised to be given for the appearance of the Indians by the firing of three guns.

The next morning, Febuary 27th, the major with the same number as before, went to treat with them, they, with John Paine, first hollaing to them: Upon their coming on shore their persons were searched on both sides, and all arms laid aside. The whole forenoon was spent in a treaty, whereat they seemed much to rejoice in expectation of a peace with the English; yet when Major Waldern desired a present delivery of captives, with assistance of men and canoes to fight the Monoscoggan Indians, enemies to them both, it was denied, though they could not have had a better testimony of their fidelity.

They alleged that the captives were given them by the Kennebeck Indians, and they must have something for keeping them for a winter, and therefore were not willing to let them go without a ransom; and as for their canoes, they said they had them in present service, being then bound for Penobscot. The price demanded, twelve skins a person, was yielded to; upon which they delivered William Chadburn, John Wannick, and John Warwood, which were all that they would own, or could be proved that they had.

The part of pay which was to be in liquor, was persently laid down, the rest was promised to be sent in the afternoon. The commanders debated what was further to be done; one or two of the old sagamores (who were believed) seemed sincere about the peace,

professed that none of them had any hand in the war, but only some of their young men, whom they could not rule; but several of the company affirming they saw some of the said Indians at Casco engaged in hostility against the English, it was resolved not to enter into any league of peace with them, but rather fight or suprize them after they had dispatched the business about the captives.

This being determined, the major with five of his men went on shore, with part of the ransom, the better to beget a confidence in them, and then to return on board again, and fit his men for further service; but if he had not wisely provided against all exigencies beforehand, he might have been prevented from going on board any more, for stepping aside a rod or two from the place for better circumspection, he espied the point of a lance from under a board, hid there, as were other arms near by, for a treacherous design that was in their minds, soon after, upon the receiving the rest of the pay, to have been put into execution. Whereupon Major Waldern took up the lance and came towards them, charging them with falsehood and treachery, for hiding weapons just by, wherewith to destroy them as soon as they had delivered the goods. The Indians discovered their guilt by their countenances, some of them making towards him, thinking to get the weapon out of his hands; but he bid them stand off threatening to kill every one that offered to touch him; and immediately waved his cap over his head (which was the sign agreed upon for all the soldiers to come on shore in case of need) upon which token the soldiers all hasted away. In the meantime the English that went on shore to wait upon the major, were forced to bestir themselves, both to secure the goods from being carried away, and to defend Major Waldern. Some of the squaws, with others of the enemy ran away; one of them catched up a bundle of guns that were hid near by, and then ran off with them.

Captain Frost seized an Indian called Megunnaway, a notorious rogue, (that had been in arms at Connecticut last June at the falls, and saw the brave and resolute Capt. Turner, when he was slain about Green-river, (and he helped to kill Thomas Bracket at Casco in August last) and with the help of Lieut. Nutter, according to the major's order, carried him on board, while himself searching about farther, found three guns in a cow-house just at hand, wherewith he armed the other three men that were with him. By this time some of the soldiers were got ashore, and, instantly, according to their major's command, pursued the enemy towards their canoes; in the chase several of the enemy were slain whose bodies were found at their return to the number of seven, amongst whom was Mattahando, the sagamore, with an old Powaw, to whom the devil had revealed, as sometimes he did to Saul, that on the same day he should be with him; for he had a little before told the Indians that within two days the English would come and kill them all, which was at the very same time verified upon himself. The body of our men overtook them before they all recovered their canoes so that without doubt, divers others of them were slain likewise, for they sunk a canoe wherein were five drowned before their eyes, and many others were not able to paddle; four they took prisoners, whom they brought away with them. There were about 25 Indians present at this encounter.

Much more damage might have been done by our men upon the enemy, if they had known the most direct way to their canoes; but the Indians having prepared all things ready for flight, as well as for fight, the more easily made their escape. One of the captives was sister to Madockawando, who was entertained very courteously by the commander in chief, and would have been carried forthwith to her brother in hopes by her means to have gained the better terms for our remaining English captives, had it not been certainly known that he was gone from home upon a hunting design, and not to return in two months.

The English took much plunder from the Indians, about a thousand weight of dry beef, with other things. Megunnaway was shot to death the same day or next; so that justice is by degrees pursuing those perfidious villains, and they, one after another brought under the wheel of destruction. Simon, the arch-traitor, seems as it is said, by his consumptive looks, to have received the sentence of death, which may bring him into the same place or state with the rest.

Feb. 28, they set sail for Sheepscot, but the wind failing, they put in at Kennebeck, from whence Captain Fisk with 40 men, were sent to the same place to seek after plunder, were they found between 30 and 40 bushels of good wheat, which they brought away with them several other things they lighted upon here and there, some of which were brought away, such as one or two great guns, from Sagadahock, and boards from Arowsick, where they found an hundred thousand foot, of which they brought home enough for the lading of their vessels, leaving the rest to be transported in a more convenient season.

While our soldiers were upon Arowsick, two of the enemy chanced to come upon the place, and one of them instantly received his reward, the other received his payment in part, which however is supposed to amount to the whole, the canoe wherein he was escaping, being found the next day all bloody, and split asunder.

March 1st, one of the Indian squaws, a captive, was sent to Taconnet fort, with a message to the Sagamores treat for the rest of the captives. Five days were given her to return, which were not expired, when Major Waldern with most of the soldiers were called to return home towards Boston, where they arrived on the 16th of March, 1676—7, having first put in at Portsmouth; bringing along with them the bones, or rather body of Captain Lake, preserved entire and whole, and free from putrefaction by the coldness of the long winter, so as it was found by the one that was near him when he was slain, easily discerned to be his, by such as had known him before.

It is supposed by those that returned, that the enemy are by this encounter of the English so scattered and broken that they will not be able to rally again suddenly, or make any attempt hereafter, if the present advantage be seriously pursued. Thus have our enemies, many of them fallen into the pit themselves which they have been diggingfor others.

This day also letters were received from Major Pynchon of Springfield, but without mention of any appearance of the enemy in that quarter: whereby we are encouraged to believe, that they have stumbled and fallen down backward, so that they shall never rise any more to make farther disturbance. That which crowned the present service was the performing it without loss of blood; all safely returning. Let them accordingly remember to pay a suitable tribute of thankfulness to HIM whose banner they went forth under and returned in safety.

THE

ENTERTAINING HISTORY OF

KING PHILIP'S WAR,

WHICH BEGAN IN THE MONTH OF JUNE, 1675.

AS ALSO OF EXPEDITIONS

MORE LATELY MADE AGAINST THE COMMON ENEMY, AND INDIAN REBELS, IN THE EASTERN PARTS OF NEW ENGLAND:

WITH SOME ACCOUNT OF THE DIVINE PROVIDENCE TOWARDS

COL. BENJAMIN CHURCH:

BY THOMAS CHURCH, ESQ. HIS SON.

AS ORIGINALLY PRINTED AND PUBLISHED IN
BOSTON: PRINTED, 1716. NEWPORT, RHODE ISLAND: REPRINTED AND SOLD BY
SOLOMON SOUTHWICK, IN QUEEN STREET, 1772.

TO THE READER.

THE subject of this following narrative offering itself to your friendly perusal, relates to the former and later wars of New England, which I myself was not a little concerned in: For in the year 1675, that unhappy and bloody Indian war broke out in Plymouth colony, where I was then building, and beginning a plantation at a place called by the Indians Sogkonate, and since by the English Little-Compton. I was the first Englishman that built upon that neck, which was full of Indians. My head and hands were full about settling a new plantation where nothing was brought to; no preparation of dwelling-house, or out-houses, or fencing made. Horses and cattle were to be provided, ground to be cleared and broken up; and the utmost caution to be used, to keep myself free from offending my Indian neighbours all round about me. While I was thus busily employed, and all my time and strength laid out in this laborious undertaking, I received a commission from the government to engage in their defence: And with my commission I received another heart, inclining me to put forth my strength in military service: And through the grace of God I was spirited for that work, and direction in it was renewed to me day by day. And although many of the actions that I was concerned in were very difficult and dangerous, yet myself, and those

who went with me voluntarily in the service, had our lives, for the most part, wonderfully preserved, by the over-ruling hand of the Almighty, from first to last; which doth aloud bespeak our praises: And to declare his wonderful works is our indispensable duty. I was ever very sensible of my own littleness, and unfitness to be employed in such great services, but calling to my mind that God is strong, I endeavoured to put all my confidence in him, and by his almighty power was carried through every difficult action: And my desire is that his name may have the praise.

It was ever my intent, having laid myself under a solemn promise, that the many and repeated favours of God to myself, and those with me in the service, might be published for generations to come. And now my great age requiring my dismission from service in the militia, and to put off my armour, I am willing that the great and glorious works of Almighty God, to us children of men, should appear to the world; and having my minutes by me, my son has taken the care and pains to collect from them the ensuing narrative of many passages relating to the former and latter wars; which I have had the perusal of, and find nothing amiss as to the truth of it; and with as little reflection upon any particular person as might be, either alive or dead.

And seeing every particle of historical truth is precious; I hope the reader will pass a favourable censure upon an old soldier, telling of the many rencounters he has had, and yet is come off alive. It is a pleasure to remember what a great number of families, in this and the neighbouring provinces in New England, did, during the war, enjoy a great measure of liberty and peace by the hazardous stations and marches of those engaged in military exercises, who were a wall unto them on this side and on that side.

I desire prayers, that I may be enabled well to accomplish my spiritual warfare, and that I may be more than conqueror through Jesus Christ loving of me.

BENJAMIN CHURCH.

THE ENTERTAINING HISTORY OF KING PHILIP'S WAR, WHICH BEGAN IN THE YEAR 1675. WITH THE PROCEEDINGS OF BENJAMIN CHURCH, ESQ.

In the year 1674 Mr. Benjamin Church, of Duxbury, being providentially at Plymouth, in the time of the court, fell into acquaintance with Capt. John Almy, of Rhode Island. Capt. Almy, with great importunity, invited him to ride with him, and view that part of Plymouth colony, that lay next to Rhode Island, known then by their Indian names of Pocasset and Sogkonate. Among other arguments to persuade him, he told him the soil was very rich, and the situation pleasant; and persuades him by all means to purchase of the company some of the court grant rights. He accepted of the invitation, views the country, and was pleased with it; made a purchase, settled a farm, found the gentlemen of the island very civil and obliging. And being himself a person of uncommon activity and industry, he soon erected two buildings upon his farm, and gained a good acquaintance with the natives; got much into their favour, and was in a little time in great esteem among them.

The next spring advancing, while Mr. Church was diligently settling his new farm, stocking, leasing and disposing of his affairs, and had a fine prospect of doing no small things; and hoping that his good success would be inviting unto other good men to become his neighbours: Behold! the rumour of war between the English and the natives gave check to his projects. People began to be very jealous of the Indians, and indeed they had no small reason to suspect that they had formed a design of war upon the English. Mr. Church had it daily suggested to him that the Indians were plotting a bloody design. That Philip, the great Mount Hope sachem, was leader therein; and so it proved, he was sending his messengers to all the neighbouring sachems to engage them into a confederacy with him in the war.

Among the rest he sent six men to Awashonks, squaw sachem of the Sogkonate Indians, to engage her in his interest: Awashonks so far listened unto them, as to call her subjects together, to make a great dance, which is the custom of that nation when they advise about momentous affairs. But what does Awashonks do, but sends away two of her men that well understood the English language, (Sassamon and George by name) to invite Mr. Church to the dance. Mr. Church upon the invitation, immediately takes with him Charles Hazelton, his tenant's son, who well understood the Indian language, and rode down to the place appointed; where they found hundreds of Indians gathered together from all parts of her dominion. Awashonks herself, in a foaming sweat, was lesding the dance; but she was no sooner sensible of Mr. Church's arrival, but she broke off, sat down, calls her nobles round her, orders Mr. Church to be invited into her presence; compliments being passed, and each one taking seats, she told him, King Philip had sent six men of his, with two of her people, that had been over at Mount Hope, to draw her into a confederacy with him, in a war with the English, desiring him to give her his advice in the case, and to tell her the truth, whether the Umpane men (as Philip had told her) were gathering a great army to invade Philip's country? He assured her he would tell the truth, and give her his best advice: then he told her it was but a few days since he came from Plymouth, and the English were then making no preparations for war; that he was in company with the principal gentlemen of the government, who had no discourse at all about war; and he believed no thoughts about it. He asked her, whether she thought he would have brought up his goods to settle in that place, if he apprehended an entering into war with so near a neighbour? She seemed to be somewhat convinced by his talk, and said she believed he spoke the truth.

Then she called for the Mount Hope men, who made a formidable appearance, with their faces painted, and their hair trimmed up in comb fashion, with their powder horns and shot bags at their backs; which among that nation is the posture and figure of preparedness for war. She told Mr. Church these were the persons that had brought her the report of the English preparations for war, and then told them what Mr. Church had said in answer to it.

Upon this began a warm talk among the Indians, but it was soon quashed, and Awashonks proceeded to tell Mr. Church, that Philip's message to her was that unless she would forthwith enter into a confederacy with him, in a war against the English, he would send his men over privately, to kill the English cattle, and burn their houses on that side the river, which would provoke the English to fall upon her, whom they would without doubt suppose the author of the mischief. Mr. Church told her he was sorry to see so threatening an aspect of affairs; and stepping to the Mount Hopes, he felt of their bags, and finding them filled with bullets, asked them what those were for? They scoffingly replied, to shoot pigeons with.

Then Mr. Church turned to Awashonks, and told her if Philip was resolved to make war, her best way would be to knock those six Mount Hopes on the head, and shelter herself under the protection of the English: Upon which the Mount Hopes were for the present dumb. But those two of Awashonk's men, who had been at Mount Hope, expressed themselves in a furious manner against his advice. And Little-eyes, one of the queen's council, joined with them, and urged Mr. Church to go aside with him among the bushes, that he might have some private discourse with him which other Indians immediately forbid, being sensible of his ill design: But the Indians began to side and grow very warm. Mr. Church, with undaunted courage, told the Mount Hopes they were bloody wretches, and thirsted after the blood of their English neighbours, who had never injured them, but had always abounded in their kindness to them. That for his own part, though he desired nothing more than peace, yet, if nothing but war would satisfy them, he believed he should prove a sharp thorn in their sides; Bid the company observe those men that were of such bloody dispositions, whether Providence would suffer them to live to see the event of the war, which others, more peaceably disposed, might do.

Then he told Awashonks he thought it might be most adviseable for her to send to the governor of Plymouth, and shelter herself and people under his protection. She liked his advice, and desired him to go on her behalf to the Plymouth government, which he consented to, and at parting advised her, whatever she did, not to desert the English interest, to join with her neighbours in a rebellion which would certainly prove fatal to her. [He moved none of his goods from his house, that there might not be the least umbrage from such an action.] She thanked him for his advice, and sent two of her men to guard him to his house; which when they came there, urged him to take care to secure his goods, which he refused for the reasons before mentioned: But desired the Indians, that if what they feared should happen, they would take care of what he left, and directed them to a place in the woods where they should dispose of them; which they faithfully observed.

He took his leave of his guard and bid them tell their mistress, if she continued steady in her dependance on the English, and

kept within her own limits of Sogkonate, he would see her again quickly; and then hastened away to Pocasset,* where he met with Peter Nunnuit, the husband of the queen of Pocasset, who was just then come over in a canoe from Mount Hope. Peter told him that there would certainly be war; for Philip had held a dance of several weeks continuance, and had entertained the young men from all parts of the country. And added, that Philip expected to be sent for to Plymouth, to be examined about Sassamon's death, who was murdered at Assawomset ponds;† knowing himself guilty of contriving that murder. The same Peter told him that he saw Mr. James Brown, of Swanzey, and Mr. Samuel Gorton, who was an interpreter, and two other men, who brought a letter from the governor of Plymouth to Philip. He observed to him further, that the young men were very eager to begin the war, and would fain have killed Mr. Brown, but Philip prevented it; telling them that his father had charged him to show kindness to Mr. Brown. In short, Philip was forced to promise them that, on the next Lord's day, when the English were gone to meeting they should rifle their houses and from that time forward kill their cattle.

Peter desired Mr. Church to go and see his wife, who was but up the hill? He went and found but few of her people with her. She said they were all gone, against her will, to the dances; and she much feared there would be a war. Mr. Church advised her to go to the island and secure herself, and those that were with her; and send to the governor of Plymouth, who she knew was her friend; and so left her, resolving to hasten to Plymouth, and wait on the governor: And he was so expeditious that he was with the governor early next morning, though he waited on some of the magistrates by the way, who were of the council of war, and also met him at the governor's. He gave them an account of his observations and discoveries, which confirmed their former intelligences, and hastened their preparation for defence.

Philip, according to his promise to his people, permitted them to march out of the neck on the next Lord's day when they plundered the nearest houses that the inhabitants had deserted: But as yet offered no violence to the people, at least none were killed. However the alarm was given by their numbers and hostile equipage, and by the prey they made of what they could find in the forsaken houses.

An express came the same day to the governor, who immediately gave orders to the captains of the towns to march the greatest part of their companies, and to rendezvous at Taunton, on Monday night, where Major Bradford was to receive them, and dispose them under Capt. (now made Major) Cutworth, of Scituate. The governor desired Mr. Church to give them his company, and to use his interest in their behalf, with the gentlemen of Rhode Island. He complied with it, and they marched the next day.—Major Bradford desired Mr. Church, with a commanded party, consisting of English and some friendly Indians, to march in the front, at some distance from the main body. Their orders were to keep so far before as not to be in sight of the army. And so they did, for by the way they killed a deer, flayed, roasted, and eat the most of him, before the army came up with them; but the Plymouth forces soon arrived at Swanzey, and were chiefly posted at Major Brown's and Mr. Mile's garrisons; and were there soon joined with those that came from Massachusetts, who had entered into a confederacy with their Plymouth brethren, against the perfidious heathens.

The enemy who began their hostilities with plundering, and destroying cattle, did not long content themselves with that game; they thirsted for English blood, and they soon broached it; killing two men in the way not far from Mr. Mile's garrison; and soon after, eight more at Mattapoiset:* Upon whose bodies they exercised more than brutish barbarities; beheading, dismembering and mangling them, and exposing them in the most inhuman manner; which gashed and ghostly objects struck a damp on all beholders.

The enemy, flushed with these exploits, grew yet bolder, and skulking every where in the bushes, shot at all passengers, and killed many that ventured abroad. They came so near as to shoot down two sentinels at Mr. Mile's garrison, under the very noses of most of our forces. These provocations drew out the resentment of some of Captain Prentice's troops, who desired they might have liberty to go out and seek the enemy in their own quarter, quarter-masters Gill and Belcher commanded the parties drawn out, who earnestly desired Mr. Church's company: They provided him a horse and furniture (his own being out of the way;) he readily complied with their desires and was soon mounted.

This party was no sooner over Mile's bridge, but were fired upon by an ambuscade of about a dozen Indians, as they were afterwards discovered to be. When they drew off, the pilot was mortally wounded, Mr. Belcher received a shot in his knee, and his horse was killed under him, Mr. Gill was struck with a musket ball on the side of his belly; but being clad with a buff coat, and some thickness of paper under it, it never broke his skin. The troopers were surprised to see both their commanders wounded and wheeled off: but Mr. Church persuaded, at length stormed and stamped, and told them it was a shame to run, and leave a wounded man there to become a prey to the barbarous enemy: For the pilot yet sat on his horse, though so mazed with the shot, as not to have sense to guide him; Mr. Gill seconded him, and offered, though much disabled, to assist in bringing him off. Mr. Church asked a stranger who gave him his company in that action, if he would go with him and fetch off the wounded man: He readily consented, and they, with Mr. Gill, went but the wounded man fainted and fell off his horse before they came to him; but Mr. Church and the stranger dismounted, took up the man dead, and laid him before Mr. Gill on his horse. Mr. Church told the other two, if they would take care of the dead man, he would go and fetch his horse back, which was going off the causey toward the enemy; but before he got over the causey he saw the enemy run to the right into the neck. He brought back the horse, and called earnestly and repeatedly to the army to come over and fight the enemy; and while he stood calling and persuading, the skulking enemy returned to their old stand, and all discharged their guns at him at one clap, though every shot missed him; yet one of the army, on the other side of the river, received one of the balls in his foot. Mr. Church now began (no succour coming to him) to think it time to retreat: Saying, the Lord have mercy on us, if such a handful of Indians shall thus dare such an army!

Upon this it was immediately resolved, and orders were given to march down into the neck, and having passed the bridge and causey, the direction was to extend both wings, which being not well heeded, by those that remained in the centre, some of them mistook their friends for their enemies, and made a fire upon them in the right wing, and wounded that noble heroic youth, Ensign Savage, in the thigh, but it happily proved but a flesh wound. They marched until they came to the narrow of the neck, at a place called Keekamuit,* where they took down the heads of eight Englishmen that were killed at the head of Mattapoiset neck, and set upon poles, after the barbarous manner of those savages. There Philip had staved all his drums, and conveyed all his canoes to the east side of Mattapoiset river; hence it was concluded, by those that were acquainted with the motions of those people, that they had quitted the neck. Mr. Church told them that Philip was doubtless gone over to Pocasset side, to engage those Indians in rebellion with him; which they soon found to be true. The enemy were not really beaten out of Mount Hope neck, though it was true they fled from thence; yet it was before any pursued them. It was but to strengthen themselves, and to gain a more advantageous post. However, some, and not a few pleased themselves with the fancy of a mighty conquest.

A grand council was held, and a resolve past, to build a fort there, to maintain the first ground they had gained, by the Indians leaving it to them; and to speak the truth, it must be said, that as they gained not that field by their sword, nor their bow; so it was rather their fear than their courage, that obliged them to set up the marks of their conquest. Mr. Church looked upon it, and talked of it with contempt, and urged hard the pursuing the enemy on Pocasset side, and with the greater earnestness, because of his promise made to Awashonks, before mentioned. The council adjourned themselves from Mount Hope to Rehoboth, where Mr. Treasurer Southworth, being weary of his charge of commissary general, provision being scarce and difficult to be obtained, for the army, that now lay still to cover the people from no body, while they were building a fort for nothing) retired, and the power and trouble of that post was left with Mr. Church, who still urged the commanding officers to move over to Pocasset side, to pursue the enemy, and kill Philip, which would, in his opinion, be more probable to keep possession of the neck, than to tarry to build a fort. He

was still restless on that side of the river, and the rather because of his promise to the squaw sachem of Sogkonate, and Captain Fuller also urged the same, until at length there came further orders concerning the fort; and withal an order for Captain Fuller with six files to cross the river to the side so much insisted on, and to try if he could get speech with any of the Pocasset or Sogkonate Indians, and that Mr. Church should go his second. Upon the captain receiving his orders, he asked Mr. Church whether he was willing to engage in this enterprise: To whom it was indeed too agreeable to be declined; though he thought the enterprise was hazardous enough for them to have more men assigned them. Captain Fuller told him, that for his own part he was grown ancient and heavy, he feared the travel and fatigue would be too much for him: but Mr. Church urged him, and told him, he would cheerfully excuse him his hardship and travel, and take that part to himself, if he might but go; for he had rather do any thing in the world than to stay there to build the fort.

Then they drew out the number assigned them, and marched the same night to the ferry, and were transported to Rhode Island, from whence, the next night, they got passage over to Pocasset side, in Rhode Island boats, and concluded there to dispose themselves in two ambuscades before day, hoping to surprise some of the enemy by their falling into one or other of their ambushments. But Capt. Fuller's party, being troubled with the epidemical plague of lust after tobacco, must needs strike fire to smoke it; and thereby discovered themselves to a party of the enemy coming up to them, who immediately fled with great precipitation.

This ambuscade drew off about break of day, perceiving they were discovered, the other continued in their post until the time assigned them, and the light and heat of the sun rendered their station both insignificant and troublesome, and then returned unto the place of rendezvous, where they were acquainted with the other party's disappointment, and the occasion of it. Mr. Church calls for the breakfast he had ordered to be brought over in the boat; but the man that had the charge of it confessed that he was asleep when the boatmen called him, and in haste came away, and never thought of it. It happened that Mr. Church had a few cakes of rusk in his pocket that Madam Cranston (the governor of Rhode Island's Lady) gave him when he came off the island; which he divided among the company, which was all the provisions they had.

Mr. Church, after their slender breakfast, proposed to Capt. Fuller, that he would march in quest of the enemy, with such of the company as would be willing to march with him, which he complied with, though with a great deal of scruple, because of his small number, and the extreme hazard he foresaw must attend them.

But some of the company reflected upon Mr. Church, that notwithstanding his talk on the other side of the river, he had not shewn them any Indians since they came over. Which now moved him to tell them, that if it was their desire to see Indians, he believed he should now soon shew them what they should say was enough.

The number allowed him soon drew off to him, which could not be many, because their whole company consisted of no more than thirty-six. They moved towards Sogkonate, until they came to the brook that runs into Nunnaquahqat neck, where they discovered a fresh and plain track, which they concluded to be from the great pine swamp, about a mile from the road that leads to Sogkonate. Now, says Mr. Church, to his men, if we follow this track, no doubt but we shall soon see Indians enough; they expressed their willingness to follow the track, and moved in it, but had not gone far before one of them narrowly escaped being bit with a rattlesnake: And the woods that the track led them through was haunted much with those snakes, which the little company seemed to be more afraid of than the black serpents they were in quest of, and therefore bent their course another way, to a place where they thought it probable to find some of the enemy. Had they kept the track to the pine swamp, they had been certain of meeting Indians enough; but not so certain that any of them should have returned to give account how many.

Now they passed down into Punkatees neck; and in their march discovered a large wigwam full of Indian truck, which the soldiers were for loading themselves with, until Mr. Church forbid it, telling them they might expect soon to have their hands full, and business without caring for plunder. Then crossing the head of the creek, into the neck, they again discovered fresh Indian tracks very lately passed before them into the neck. They then got privately and undiscovered unto the fence of Capt. Almy's pease field, and divided into two parties, Mr. Church keeping the one party with himself, sent the other with Lake, who was acquainted with the ground, on the other side. Two Indians were soon discovered coming out of the pease field towards them; when Mr. Church, and those that were with him, concealed themselves from them, by falling flat on the ground; but the other division not using the same caution, were seen by the enemy, which occasioned them to run; which when Mr. Church perceived, he showed himself to them and told them he would not hurt them: But they ran, and Church pursued. The Indians climbed over a fence, and one of them facing about discharged his piece, but without effect, on the English: One of the English soldiers ran up to the fence and fired upon him that had discharged his piece; and they concluded, by the yelling they heard, that the Indian was wounded; but the Indians soon got into the thickets, whence they saw them no more for the present.

Mr. Church then marching over a plain piece of ground, where the woods were very thick on one side; ordered his little company to march at a double distance, to make as big a show (if they should be discovered) as might be; but before they saw any body, they were saluted with a volley of fifty or sixty guns; some bullets came very surprisingly near Mr. Church, who starting looked behind him, to see what was become of his men, expecting to have seen half of them dead, but seeing them all upon their legs, and briskly firing at the smoke of their enemies' guns (for that was all that was then to be seen,) He blessed God, and called to his men not to discharge all their guns at once lest the enemy should take the advantage of such an opportunity to run upon them with their hatchets.

Their next motion was immediately into the pease field.* When they came to the fence, Mr. Church bid as many as had not discharged their guns, to clap under the fence, and lie close, while the other, at some distance in the field, stood to charge; hoping that if the enemy should creep to the fence, to gain a shot at those that were charging their guns, they might be surprised by those that lay under the fence; but casting his eyes to the side of the hill above them, the hill seemed to move, being covered over with Indians, with their bright guns glittering in the sun, and running in a circumference with a design to surround them.

Seeing such multitudes surrounding him and his little company, it put him upon thinking what was become of the boats that were ordered to attend him; and looking up he espied them ashore at Sandy point, on the island side of the river, with a number of horse and foot by them, and wondered what should be the occasion, until he was afterwards informed, that the boats had been over that morning from the island, and had landed a party of men at Fogland, that were designed in Punkatees neck, to fetch off some cattle and horses, but were ambuscaded, and many of them wounded by the enemy.

Now our gentleman's courage and conduct were both put to the test, he encourages his men, and orders some to run and take a wall for shelter before the enemy gained it. It was time for them now to think of escaping if they knew which way. Mr. Church orders his men to strip to their white shirts, that the islanders might discover them to be Englishmen; and then orders three guns to be fired distinct, hoping it might be observed by their friends on the opposite shore. The men that were ordered to take the wall, being very hungry, stopped a while among the pease to gather a few, being about four rods from the wall; the enemy from behind hailed them with a shower of bullets; but soon all but one came tumbling over an old hedge down the bank, where Mr. Church and the rest were, and told him that his brother B. Southworth, who was the man that was missing, was killed, that they saw him fall; and so they did indeed see him fall, but it was without a shot, and lay no longer than till he had an opportunity to clap a bullet into one of the enemy's forehead, and then came running to his company. The meanness of the English powder was now their greatest misfortune; when they were immediately upon this beset with multitudes of Indians, who possessed themselves of every rock, stump, tree or fence that was in sight firing upon them without ceasing; while they had no other shelter but a small bank and bit of a water fence. And yet, to add to the disadvantage of this little handful of distressed men, the Indians also possessed themselves of the ruins of a stone house that overlooked them; so that now they had no way to prevent lying quite open to some or other of the enemy, but to heap up stones before them, as they did, and still bravely and wonderfully defended them

* Tiverton, about half a mile above Fogland ferry

selves against all the numbers of the enemy. At length came over one of the boats from the island shore, but the enemy plied their shot so warmly to her as made her keep at some distance; Mr. Church desired them to send their canoe ashore to fetch them on board; but no persuasions nor arguments could prevail with them to bring their canoe to shore; which some of Mr. Church's men perceiving, began to cry out, For God's sake to take them off, for their ammunition was spent, &c. Mr. Church being sensible of the danger of the enemy's hearing their complaints, and being made acquainted with the weakness and scantiness of their ammunition, fiercely called to the boat's master, and bid him either send his canoe ashore, or else be gone presently or he would fire upon him.

Away goes the boat, and leaves them still to shift for themselves; but then another difficulty arose, the enemy seeing the boat leave them, were reanimated, and fired thicker and faster than ever; upon which some of the men that were lightest of foot, began to talk of attempting an escape by flight, until Mr. Church solidly convinced them of the impracticableness of it; and encouraged them yet, told them, that he had observed so much of the remarkable and wonderful providence of God hitherto preserving them, that it encouraged him to believe, with much confidence, that God would yet preserve them; that not a hair of their head should fall to the ground; bid them be patient, courageous and prudently sparing of their ammunition, and he made no doubt but they should come well off yet, &c. until his little army again resolved, one and all, to stay with, and stick by him. One of them, by Mr. Church's order, was pitching a flat stone up an end before him in the sand, when a bullet from the enemy, with a full force, struck the stone while he was pitching it an end; which put the poor fellow to a miserable start, till Mr. Church called upon him to observe, how God directed the bullets, that the enemy could not hit him when in the same place, yet could hit the stone as it was erected.

While they were thus making the best defence they could against their numerous enemies, that made the woods ring with their constant yelling and shouting: And night coming on, somebody told Mr. Church they, espied a sloop up the river as far as Gold island, that seemed to be coming down towards them; He looked up and told them, succour was now coming, for he believed it was Captain Golding, whom he knew to be a man for business, and would certainly fetch them off, if he came. The wind being fair, the vessel was soon with them; and Captain Golding it was. Mr. Church (as soon as they came to speak with one another) desired him to come to anchor at such a distance from the shore, that he might veer out his cable and ride afloat, and let slip his canoe, that it might drive ashore; which direction Captain Golding observed; but the enemy gave him such a warm salute, that his sails, colour, and stern, were full of bullet holes.

The canoe came ashore, but was so small that she would not bear above two men at a time; and when two were got aboard, they turned her loose to drive ashore for two more, and the sloop's company kept the Indians in play the while; but when at last it came to Mr. Church's turn to go aboard, he had left his hat and cutlass at the well where he went to drink, when he first came down; he told his company, he would never go off and leave his hat and cutlass for the Indians; they should never have that to reflect upon him: Though he was much dissuaded from it, yet he would go and fetch them. He put all the powder he had left into his gun (and a poor charge it was) and went presenting his gun at the enemy, until he took up what he went for; at his return he discharged his gun at the enemy, to bid them farewell for that time; but had not powder enough to carry the bullet half way to them.

Two bullets from the enemy struck the canoe as he went on board, one grazed the hair of his head a little before; another stuck in a small stake that stood right against the middle of his breast.

Now this gentleman with his army, making in all twenty men, himself and his pilot being numbered with them, got all safe on board after six hours engagement with three hundred Indians; whose number we were told afterwards by some of themselves. A deliverance which that good gentleman often mentions to the glory of God, and his protecting providence. The next day meeting with the rest of his little company, whom he had left at Pocasset (that had also a small skirmish with the Indians, and had two men wounded) they returned to the Mount Hope garrison; which Mr. Church used to call the loosing fort. Mr. Church then returning to the island, to seek provision for the army, meets with Alderman, a noted Indian, that was just come over from the squaw sachem's cape of Pocasset, having deserted from her, and brought over his family; who gave him an account of the state of the Indians, and where each of the sagamore's head quarters were. Mr. Church then discoursed with some who knew the spot well where the Indians said Weetamore's* head quarters were, and offered their service to pilot him. With this news he hastened to the Mount Hope garrison. The army expressed their readiness to embrace such an opportunity.

All the ablest soldiers were now immediately drawn off, equipped and despatched upon this design, under the command of a certain officer; and having marched about two miles, viz. until they came to the cove that lies south west from the Mount, where orders were given for an halt: The commander in chief told them he thought it proper to take advice before he went any further; called Mr. Church and the pilot, and asked them, how they knew that Philip and all his men were not by that time got to Weetamore's camp; or that all her own men were not by that time returned to her again? With many more frightful questions. Mr. Church told him, they had acquainted him with as much as they knew, and that for his part, he could discover nothing that need to discourage them from proceeding; that he thought it so practicable, that he, with the pilot, would willingly lead the way to the spot, and hazard the brunt. But the chief commander insisted on this, that the enemies, number were so great, and he did not know what numbers more might be added unto them by that time

* Squaw sachem of Pocasset.

time: And his company so small, that he could not think it practicable to attack them: Added moreover, that if he was sure of killing all the enemy, and knew that he must lose the life of one of his men in the action, he would not attempt it. Pray Sir, then (replied Mr. Church) please to lead your company to yonder windmill, on Rhode Island, and there they will be out of danger of being killed by the enemy, and we shall have less trouble to supply them with provisions. But return he would, and did, unto the garrison, until more strength came to them, and a sloop to transport them to the Fall river,* in order to visit Weetamore's camp. Mr. Church, one Baxter, and Captain Hunter an Indian, proffered to go out on the discovery on the left wing, which was accepted; they had not marched above a quarter of a mile before they started three of the enemy. Captain Hunter wounded one of them in his knee, whom, when he came up, he discovered to be his near knsman; the captive desired favour for his squaw, if she should fall into their hands, but asked none for himself, excepting the liberty of taking a whiff of tobacco, and while he was taking his whiff, his kinsman with one blow of his hatchet despatched him. Proceeding to Weetamore's camp, they were discovered by one of the enemy, who ran in and gave information, upon which a lusty young fellow left his meat upon his spit,† running hastily out, told his companions, he would kill an Englishman before he eat his dinner; but failed of his design, being no sooner out but shot down. The enemies' fires, and what shelter they had was by the edge of a thick cedar swamp, into which, on this alarm, they betook themselves, and the English as nimbly pursued; but were soon commanded back by their chieftain, after they were come within hearing of the cries of their women and children, and so ended that exploit; but returning to their sloop the enemy pursued them, and wounded two of their men. The next day they returned to the Mount Hope garrison.

Soon after this, was Philip's head quarters visited by some other English forces; but Philip and his gang had the very fortune to escape, that Weetamore and her's (but now mentioned) had; they took into a swamp, and their pursuers were commanded back. After this Dartmouth's distresses required succour, great part of the town being laid desolate, and many of the inhabitants killed; the most of Plymouth forces were ordered thither; and coming to Russel's garrison at Ponaganset,‡ they met with a number of the enemy that had surrendered themselves prisoners on terms promised by Capt. Eels of the garrison, and Ralph Earl, who persuaded them (by a friend Indian he had employed) to come in. And had their promises to the Indians been kept, and the Indians fairly treated, it is probable that most if not all the Indians in those parts had soon followed the example of those who had now surrendered themselves; which would have been a good step towards finishing the war. But in spite of all that Capt. Eels, Church or Earl could say, argue, plead, or beg, somebody else that had more power in their hands improved it;

* South part of Freetown. † Probaby a wooden spit.
‡ In Dartmouth

and without any regard to the promises made them on their surrendering themselves, they were carried away to Plymouth, there sold, and transported out of the country, being about eight score persons. An action so hateful to Mr. Church, that he opposed it to the loss of the good will and respects of some that before were his good friends. But while these things were acting at Dartmouth, Philip made his escape, leaving his country, fled over Taunton river, and Rehoboth plain and Patuxet river, where Capt. Edmunds, of Providence, made some spoil upon him, and had probably done more, but was prevented by the coming of a superior officer, that put him by. And now another fort was built at Pocasset, that proved as troublesome and chargeable as that at Mount Hope; and the remainder of the summer was improved in providing for the forts and forces there maintained, while our enemies were fled some hundred of miles into the country, near as far as Albany. And now strong suspicions began to arise of the Narraganset Indians, that they were ill affected, and designed mischief; and so the event soon discovered. The next winter they began their hostilities upon the English. The united colonies then agreed to send an army to suppress them: Governor Winslow to command the army. He undertaking the expedition, invited Mr. Church to command a company in the expedition, which he declined, craving excuse from taking commission, he promised to wait upon him as a Reformado through the expedition. Having rode with the general to Boston, and from thence to Rehoboth; upon the general's request he went thence the nearest way over the ferries, with Major Smith, to his garrison in the Narraganset country, to prepare and provide for the coming of General Winslow; who marched round through the country with his army, proposing by night to surprise Pumham* (a certain Narraganset sachem) and his town; but being aware of the approach of our army, made their escape into the deserts; but Mr. Church meeting with fair winds arrived safe at the major's garrison in the evening and soon began to inquire after the enemies' resorts, wigwams, or sleeping places, and having gained some intelligence, he proposed to the Eldriges, and some other brisk hands that he met with, to attempt the surprising of some of the enemy, to make a present of to the general, when he should arrive, which might advantage his design: Being brisk blades, they readily complied with the motion, and were soon upon their march. The night was very cold, but blessed with the moon; before the day broke they effected their exploit, and by the rising of the sun arrived at the major's garrison, where they met the general, and presented him with eighteen of the enemy they had captured. The general, pleased with the exploit, gave them thanks, particularly to Mr. Church, the mover and chief actor of the business; and sending two of them, (likely boys) a present to Boston; smiling on Mr. Church, told him, that he made no doubt but his faculty would supply them with Indian boys enough before the war was ended.

Their next move was to a swamp, which the Indians had fortified with a fort. Mr. Church rid in the general's guard when the bloody engagement began; but being impatient of being out of the heat of the action, importunately begged leave of the general that he might run down to the assistance of his friends: the general yielded to his request provided he could rally some hands to go with him. Thirty men immediately drew out and followed him: They entered the swamp, and passed over the log, that was the passage into the fort, where they saw many men and several valiant captains lie slain: Mr. Church spying Captain Gardner of Salem, amidst the wigwams in the east end of the fort, made towards him, but on a sudden, while they were looking each other in the face, Captain Gardner settled down Mr. Church stepped to him, and seeing the blood run down his cheek, lifted up his cap, and calling to him by his name; he looked up in his face, but spoke not a word, being mortally shot through the head; and observing his wound, Mr. Church found the ball entered his head on the side that was next the upland, where the English entered the swamp, upon which, having ordered some care to be taken of the captain, he despatched information to the general, that the best and forwardest of his army, that hazarded their lives to enter the fort, upon the muzzle of the enemies' guns, were shot in their backs, and killed by them that lay behind. Mr. Church with his small company hastened out of the fort that the English were now possessed of, to get a shot at the Indians that were in the swamp, and kept firing upon them. He soon met with a broad and bloody track, where the enemy had fled with their wounded men; following hard in the tract, he soon spied one of the enemy who clapped his gun across his breast, made towards Mr. Church, and beckoned to him with his hand; Mr. Church immediately commanded no man to hurt him, hoping by him to have gained some intelligence of the enemy, that might be of advantage; but it unhappily fell out that a fellow that lagged behind coming up, shot down the Indian, to Mr. Church's great grief and disappointment; but immediately they heard a great shout of the enemy, which seemed to be behind them, or between them and the fort; and discovered them running from tree to tree to gain advantages of firing upon the English that were in the fort. Mr. Church's great difficulty now was how to discover himself to his friends in the fort, using several inventions, till at length he gained an opportunity to call to, and inform a serjeant in the fort, that he was there, and might be exposed to their shots, unless they observed it. By this time he discovered a number of the enemy almost within shot of him, making towards the fort. Mr. Church and his company were favoured by a heap of brush that was between them and the enemy, and prevented their being discovered to them. Mr. Church had given his men their particular orders for firing upon the enemy, and as they were rising up to make their shot; the fore-mentioned sergeant in the fort called out to them, for God's sake not to fire, for he believed they were some of their friend Indians; they clapped down again, but were soon sensible of their serjeant's mistake. The enemy got to the top of the tree, the body whereof the serjeant stood upon, and there clapped down out of sight of the fort, but all this while never discovered Mr. Church, who observed them to keep gathering unto that place, until there seemed to be a formidable black heap of them. Now brave boys (said Mr. Church to his men) if we mind our hits, we may have a brave shot, and let our sign for firing on them, be their rising to fire into the fort. It was not long before the Indians rising up as one body, designing to pour a volley into the fort; when our Church nimbly started up and gave them such a round volley, and unexpected clap on their backs, that they, who escaped with their lives, were so surprised, that they scampered, they knew not whither themselves, about a dozen of them ran right over the log into the fort, and took into a sort of hovel that was built with poles, after the manner of a corn crib. Mr. Church's men having their cartridges fixed, were soon able to obey his order, which was immediately to charge, and run on upon the hovel, and overset it, calling, as be ran on, to some that were in the fort, to assist him in oversetting it; they no sooner came to face the enemies' shelter, but Mr. Church discovered that one of them had found a hole to point his gun through, right at him; but however encouraged his company and ran right on, till he was struck with three bullets, one in his thigh, which was near half cut off as it glanced on the joint of his hip-bone; another through the gathering of his breeches and drawers, with a small flesh wound; a third pierced his pocket, and wounded a pair of mittens, that he had borrowed of Captain Prentice; being wrapped up together had the misfortune of having many holes cut through them with one bullet; but however, he made a shift to keep on his legs, and nimbly discharged his gun at them that had wounded him; being disabled now to go a step, his men would have carried him off, but he forbid their touching of him, until they had perfected their project of oversetting the enemies, shelter; bid them run, for now the Indians had no guns charged. While he was urging them to run on, the Indians began to shoot arrows, and with one pierced through the arm of the Englishman that had hold of Mr. Church's arm to support him. The English, in short, were discouraged, and drew back; and by this time the English people in the fort had began to set fire to the wigwams and houses in the fort, which Mr. Church laboured hard to prevent; they told him, They had orders from the general to burn them; he begged them to forbear until he had discoursed with the general; and hastening to him, he begged to spare the wigwams, &c. in the fort from fire, told him, the wigwams were musket-proof, being all lined with baskets tubs of grain, and other provisions, sufficient to supply the whole army, until the spring of the year; and every wounded man might have a good warm house to lodge in, who otherways would necessarily perish with the storms and cold: And moreover, that the army had no other provisions to trust unto, and depend upon; that he knew that the Plymouth forces had not so much as one biscuit left, for he had seen their last dealt out, &c. The general advising a few words with the gentlemen that were about him, moving towards the fort, designing to ride in himself, and bring in the

* Sachem of Shawomet, or Warwick.

whole army; but just as he was entering the swamp, one of the captains met him, and asked him, whither he was going? he told him into the fort; the captain laid hold of his horse, and told him, his life was worth an hundred of theirs, and he should not expose himself. The general told him, that the brunt was over, and that Mr. Church had informed him that the fort was taken, &c. and as the case was circumstanced he was of the mind, that it was most practicable for him, and his army to shelter themselves in the fort. The captain in a great heat replied, that Church lied; and told the general, that if he moved another step towards the fort he would shoot his horse under him. Then brushed up another gentleman, a certain doctor, and opposed Mr. Church's advice, and said, if it were complied with, it would kill more men than the enemy had killed; for (said he) by to-morrow the wounded men will be so stiff that there will be no moving of them: And looking upon Mr. Church, and seeing the blood flow apace from his wounds, told him, That if he gave such advice as that was, he should bleed to death like a dog before he would endeavour to staunch his blood: though after they had prevailed against his advice they were sufficiently kind to him. And burning up all the houses and provisions in the fort; the army returned the same night in the storm and cold; and I suppose that every one who was acquainted with that night's march deeply laments the miseries that attended them, especially the wounded and dying men. But it mercifully came to pass that Captain Andrew Belcher arrived at Mr. Smith's that very night from Boston, with a vessel loaded with provisions for the army who must otherwise have perished for want.

Some of the enemy that were then in the fort have since informed us, that near a third of the Indians belonging to all the Narraganset country were killed by the English and by the cold of that night, that they fled out of their fort so hastily that they carried nothing with them: That if the English had kept in the fort, the Indians would certainly have been necessitated, either to surrender themselves to them, or to have perished by hunger, and the severity of the season.* Sometime after this fort-fight a certain Sogkonate Indian hearing Mr. Church relate the manner of his being wounded, told him, that he did not know but he himself was the Indian that wounded him or he was one of that company of Indians that Mr. Church made a shot upon, when they were rising to make a shot into the fort. They were in number about sixty or seventy, that just then came down from Pumham's town and never before then fired a gun against the English; that when Mr. Church fired upon them he killed fourteen dead upon the spot, and wounded a greater number than he killed, many of whom died afterwards of their wounds, in the cold and storm the following night.

* The swamp fight happened on December 29, 1675 in which about fifty English were killed in the action and died of their wounds; and about three hundred or three hundred and fifty Indians, men, women, and children, were killed, and as many more captured. It is said five hundred wigwams were burnt with the fort; and two hundred more in other parts of Narraganset. The place of the fort was an elevated ground or piece of upland, of perhaps three or four acres, in the middle of a hideous swamp; about seven miles near due west from Narraganset south ferry.

Mr. Church was moved with other wounded men, over to Rhode Island, where, in about three months time, he was in some good measure recovered of his wounds, and the fever that attended them: And then went over to the general to take his leave of him, with a design to return home.

But the general's great importunity again persuaded him to accompany him in a long march into the Nipmuck* country, though he had then tents in his wounds, and so lame as not to be able to mount his horse without two men's assistance.

In this march, the first thing remarkable was, they came to an Indian town, where there were many wigwams in sight, but an icy swamp, lying between them and the wigwams, prevented their running at once upon it as they intended: There was much firing upon each side before they passed the swamp. But at length the enemy all fled, and a certain Mohegan, that was a friend Indian, pursued and seized one of the enemy that had a small wound in his leg, and brought him before the general, where he was examined. Some were for torturing him to bring him to a more ample confession of what he knew concerning his countrymen. Mr. Church, verily believing he had been ingenuous in his confession, interceded and prevailed for his escaping torture. But the army being bound forward in their march, and the Indian's wound somewhat disenabling him for travelling, it was concluded he should be knocked on the head: Accordingly he was brought before a great fire and the Mohegan that took him was allowed, as he desired, to be his executioner. Mr. Church taking no delight in the sport, framed an errand at some distance among the baggage-horses, and when he got ten rods, or thereabouts, from the fire, the executioner fetching a blow with a hatchet at the head of the prisoner, he being aware of the blow, dodged his head aside, and the executioner missing his stroke, the hatchet flew out of his hand, and had like to have done execution where it was not designed. The prisoner, upon his narrow escape, broke from them that held him, and, notwithstanding his wound, made use of his legs, and happened to run right upon Mr. Church, who laid hold on him, and a close scuffle they had, but the Indian having no clothes on slipped from him, and ran again, and Mr. Church pursued the Indian, although being lame, there was no great odds in the race, until the Indian stumbled and fell, and they closed again, scuffled and fought pretty smartly, until the Indian by the advantage of his nakedness, slipped from his hold again, and set out on his third race, with Mr. Church close at his heels, endeavouring to lay hold on the hair of his head, which was all the hold could be taken of him: and running through a swamp that was covered with hollow ice, it made so loud a noise that Mr. Church expected (but in vain) that some of his English friends would follow the noise, and come to his assistance. But the Indian happened to run athwart a large tree, that lay fallen near breast high, where he stopped and cried out aloud for help; but Mr. Church being soon upon him again, the Indian seized him fast by the hair of his head, and endeavouring by twisting to break his neck, but though Mr. Church's wounds had somewhat weakened him, and the Indian a stout fellow, yet he held him in play, and twisted the Indian's neck as well, and took the advantage of many opportunities, while they hung by each other's hair, gave him notorious bumps in the face with his head. But in the heat of this scuffle they heard the ice break with somebody coming apace to them, which when they heard, Church concluded there was help for one or other of them, but was doubtful which of them must now receive the fatal stroke; anon somebody comes up to them, who proved to be the Indian that had first taken the prisoner. Without speaking a word, he felt them out (for it was so dark he could not distinguish them by sight) the one being clothed, and the other naked, he felt where Mr. Church's hands were fastened in the Netop's hair, and with one blow settled his hatchet in between them and ended the strife. He then spoke to Mr. Church, and hugged him in his arms, and thanked him abundantly for catching his prisoner, and cut off the head of his victim, and carried it to the camp; and giving an account to the rest of the friend Indians in the camp, how Mr. Church had seized his prisoner, &c. they all joined a mighty shout.

* Country about Worcester, Oxford, Craston, &c.

Proceeding in this march, they had the success of killing many of the enemy; until at length their provisions failing, they returned home.

King Philip (as was before hinted) was fled to a place called Scattacook, between York and Albany, where the Moohags* made a descent upon him and killed many of his men, which moved him from thence.

His next kennelling place was at the falls of Connecticut river,† where, sometime after, Capt. Turner found him, came upon him by night, killed him a great many men, and frightened many more into the river, that were hurled down the falls and drowned.

Philip got over the river, and on the backside of Wetuset hills meets with all the remnants of the Narraganset and Nipmuck‡ Indians that were there gathered together, and became very numerous, and made their descent on Sudbury and the adjacent parts of the country, where they met with and swallowed up valiant Capt. Wadsworth and his company, and made many other doleful desolations in those parts. The news whereof coming to Plymouth, and they expecting probably the enemy would soon return again into their colony; the council of war was called together, and Mr. Church was sent for to them, being observed by the whole colony to be a person extraordinarily qualified for, and adapted to, the affairs of war. It was proposed in council, that lest the enemy, in their return, should fall on Rehoboth, or some other of their out-towns, a company, consisting of 60 or 70 men, should be sent into those parts; and Mr. Church invited to take the command of them. He told them, that if the enemy returned into that colony again, they might reasonably expect that they would come very numerous, and if he should take the command of men, he should not lie in any town or garrison with them, but would lie in the woods as the enemy did: And that to send out such small companies against such multitudes of the enemy that were now mustered to gether, would

* Mohawks. † Above Deerfield. ‡ About Rutland.

ne but to deliver so many men into their nands, to be destroyed, as the worthy Captain Wadsworth and his company were. His advice upon the whole was, that if they sent out any forces, to send out no less than 300 soldiers; and that the other colonies should be asked to send out their quotas also; adding, that if they intended to make an end of the war by subduing the enemy, they must make a business of the war, as the enemy did; and that of his own part, he had wholly laid aside all his own private business concerns, ever since the war broke out. He told them, that if they would send forth such forces as he should direct, he would go with them for a six weeks' march, which was long enough for men to be kept in the woods at once; and if they might be sure of liberty to return in such a space, men would go out cheerfully; and he would engage 150 of the best soldiers should list voluntarily to go with him, if they would please to add 50 more; and 100 of the friend Indians; and with such an army, he made no doubt, but he might do good service; but on other terms he did not incline to be concerned.

Their reply was that they were already in debt, and so big an army would bring such charge upon them, that they should never be able to pay; and as for sending out Indians, they thought it no ways adviseable, and in short none of his advice practicable.

Now Mr. Church's consort, and his then only son were till this time remaining at Duxbury, and he fearing for their safety there (unless the war was more vigorously engaged in, resolved to move to Rhode Island, though it was much opposed both by government and relations; but at length, the governor considering that he might be no less serviceable by being on that side of the colony, gave his permit, and wished he had twenty more as good men to send with him.

Then preparing for his removal, he went with his small family to Plymouth, to take leave of their friends, where they met with his wife's parents, who much persuaded that she might be left at Mr. Clark's garrison, (which they supposed to be a mighty safe place) or at least that she might be there until her soon expected lying-in was over, (being near her time.) Mr. Church no ways inclining to venture her any longer in those parts, and no arguments prevailing with him, he resolved to set out for Taunton, and many of their friends accompanied them. There they found Captain Pierce with a commanded party, who offered Mr. Church to send a relation of his with some others to guard him to Rhode Island; but Mr. Church thanked him for his respectful offer, but for some good reasons refused to accept it. In short, they got safe to Captain John Almy's house upon Rhode Island, where they met with friends and good entertainment. But, by the way, let me not forget this remarkable Providence, viz. That within twenty four hours, or thereabouts, after their arrival at Rhode Island, Mr. Clark's garrison that Mr. Church was so much importuned to leave his wife and children at, was destroyed by the enemy.

Mr. Church being at present disenabled from any particular service in the war, began to think of some other employ; but he no sooner took a tool to cut a small stick, but he cut off the top of his fore-finger, and the next to it half off; upon which he smilingly said, that he thought he was out of his way, to leave the war, and resolved he would go to war again. Accordingly his second son being born on the 12th of May, and his wife and son like to do well, Mr. Church embraces the opportunity of passage in a sloop bound to Barnstable; which landed him at Sogkonesset, from whence he rid to Plymouth; and arrived there on the first Tuesday in June: The general court then sitting welcomed him, and told him they were glad to see him alive. He replied, he was glad to see them alive, for he had seen so many fires and smokes towards their side of the country, since he left them, that he could scarce eat or sleep with any comfort, for fear they had all been destroyed. For all travelling was stopped, and no news had passed for a long time together. He gave them an account that the Indians had made horrid desolations at Providence, Warwick, Pawtuxet, and all over the Narraganset country, and that they prevailed daily against the English on that side of the country: Told them, he longed to hear what methods they designed in the war. They told him, they were particularly glad that Providence had brought him there at that juncture; for they had concluded the very next day to send out an army of 200 men two thirds English, and one third Indians, in some measure agreeable to his former proposal; expecting Boston and Connecticut to join with their quotas. In short, it was so concluded, and that Mr. Church should return to the Island, and see what he could muster there, of those that had moved from Swanzey, Dartmouth, &c. So returning the same way he came; when he came to Sogkonesset, he had a sham put upon him about a boat he had brought to go home in, and was forced to hire two of the friend Indians to paddle him in a canoe from Elisabeth's to Rhode Island.

It fell out, that as they were in their voyage passing by Sogkonate-point, some of the enemy were upon the rocks a fishing; he bid the Indians that managed the canoe to paddle so near the rocks as that he might call to those Indians; told them, that he had a great mind ever since the war broke out to speak with some of the Sogkonate Indians, and that they were their relations, and therefore they need not fear their hurting of them. And he added that he had a mighty conceit, that if he could get a fair opportunity to discourse with them, that he could draw them off from Philip, for he knew they never heartily loved him. The enemy halloed and made signs for the canoe to come to them; but when they approached them they skulked and hid in the clefts of the rocks; then Mr. Church ordered the canoe to be paddled off again, lest if he came too near they should fire upon him. Then the Indians appearing again, beckoned and called in the Indian language, and bid them come ashore, for they wanted to speak with him. The Indians in the canoe answered them again; but they on the rocks told them, that the surf made such a noise against the rocks, they could not hear any thing they said. Then Mr. Church, by signs with his hands, gave them to understand that he would have two of them go down upon the point of the beach (a place where a man might see who was near him) accordingly two of them ran along the beach, and met him they not having any arms, excepting that one of them had a lance in his hand; they urged Mr. Church to come ashore, for they had a great desire to have some discourse with him. He told them, if he that had his weapon in his hand would carry it up some distance upon the beach, and leave it, he would come ashore and discourse with them. He did so, and Mr. Church went ashore, hauled up his canoe, ordered one of the Indians to stay by it, and the other to walk above on the beach, as a sentinel, and to see that the coasts were clear; and when Mr. Church came up to the Indians, one of them happened to be honest George, one of the two that Awashonks formerly sent to call him to her dance, and was so careful to guard him back to his house again, the last Sogkonate Indian he spoke with before the war broke out; he spoke English very well. Mr. Church asked him where Awashonks was? He told him in a swamp about three miles off. Mr. Church asked him, what it was he wanted that he halloed and called him ashore? He answered, that he took him for Church as soon as he heard his voice in the canoe, and that he was very glad to see him alive, and he believed his mistress would be glad to see him, and speak with him; he told him further, that he believed she was not fond of maintaining a war with the English, and that she had left Philip, and did not intend to return to him any more; he was mighty earnest with Mr. Church to tarry there while he would run and call her; but he told him no, for he did not know but the Indians would come down and kill him before he could get back again; he said, if Mount-Hope, or Pocasset Indians could catch him, he believed they would knock him on the head, but all Sogkonate Indians knew him very well, and he believed none of them would hurt him. In short, Mr. Church refused to tarry, but promised he would come over again, and speak with Awashonks, and some other Indians that he had a mind to talk with.

Accordingly he appointed him to notify Awashonks, her son Peter, their chief Captain, and one Nompash (an Indian that Mr. Church had formerly a particular respect for, to meet him two days after, at a rock at the lower end of Captain Richmond's farm, which was a very noted place; and if that day should prove stormy, or windy, they were to expect him the next moderate day, Mr. Church telling George that he would have him come with the persons mentioned, and no more.

They giving each other their hand upon it parted, and Mr. Church went home, and the next morning to Newport, and informed the government of what had passed between him and the Sogkonate Indians, and desired their permit for him and Daniel Wilcox (a man that well understood the Indian language) to go over to them. They told him, that they thought he was mad, after such service as he had done, and such dangers as he escaped, now to throw away his life, for the rogues would as certainly kill him, as ever he went over; and utterly refused to grant his permit, or to be willing to run the risk.

Mr. Church told them, that it ever had been in his thought since the war broke out, that if he could discourse with the Sogkonate Indians, he could draw them off from Philip and employ them against him; but could not, till now, ever have an opportunity to speak

with any of them, and was very loth to lose it, &c. At length they told him, if he would go, it should be only with the two Indians that came with him; but they would give him no permit under their hands. He took his leave of them, resolving to prosecute his design; they told him they were sorry to see him so resolute, nor if he went did they ever expect to see his face again.

He bought a bottle of rum, and a small roll of tobacco, to carry with him, and returned to his family. The next day, being the day appointed for the meeting, he prepared two light canoes for the design, and his own man, with the two Indians for his company. He used such arguments with his tender, and now almost broken hearted wife, from the experience of former preservations and the prospect of the great service he might do, might it please God to succeed his design, &c., that he obtained her consent to his attempt; and committing her, the babes and himself to Heaven's protection, he set out. They had from the shore about a league to paddle; drawing near the place, they saw the Indians setting on the bank, waiting for their coming. Mr. Church sent one of his Indians ashore in one of the canoes to see whether they were the same Indians whom he had appointed to meet him, and no more; and if so to stay ashore and send George to fetch him; accordingly George came and fetched Mr. Church ashore, while the other canoe played off to see the event, and to carry tidings if the Indians should prove false.

Mr. Church asked George whether Awashonks and the other Indians he appointed to to meet him were there? He answered they were; he then asked him if there were no more than they whom he appointed to be there? To which he would give him no direct answer. However, he went ashore, where he was no sooner landed, but Awashonks and the rest that he had appointed to meet him there, rose up and came down to meet him; and each of them successively gave him their hands, and expressed themselves glad to see him, and gave him thanks for exposing himself to visit them. They walked together about a gunshot from the water, to a convenient place to sit down. Where at once rose up a great body of Indians, who had lain hid in the grass, (that was high as a man's waist) and gathered round them, till they had closed them in; being all armed with guns, spears, hachets, &c. with their hair trimmed and faces painted, in their warlike appearance. It was doubtless somewhat surprising to our gentleman at first, but without any visible discovery of it, after a small silent pause on each side he spoke to Awashonks, and told her, that George had informed him that she had a desire to see him, and discourse about making peace with the English. She answered yes; then said Mr. Church, it is customary when people meet to treat of peace, to lay aside their arms, and not to appear in such hostile form as your people do; and desired of her, that if they might talk about peace, which he desired they might, her men might lay aside their arms, and appear more tractable. Upon which there began a considerable noise and murmur among them in their own language, till Awashonks asked him, what arms they should lay down, and where? He (perceiving that the Indians looked very surly, and much displeased) replied, only their guns at some small distance, for formality's sake; upon which, with one consent, they laid aside their guns, and came and sat down.

Mr. Church pulled out his calabash and asked Awashonks, whether she had lived so long at Wetuset, as to forget to drink Occapeches; and drinking to her, he perceived that she watched him very diligently, to see (as he thought) whether he swallowed any of the rum; he offered her the shell, but she desired him to drink again first, he then told her, there was no poison in it, and pouring some into the palm of his hand, sipped it up, and took the shell and drank to her again, and drank a good swig, which indeed was no more than he needed. Then they all standing up, he said to Awashonks, you won't drink for fear there should be poison in it; and then handed it to a little ill-looking fellow, who catched it readily enough, and as greedily would have swallowed the liquor when he had it at his mouth; but Mr. Church catched him by the throat and took it from him, asking him, whether he intended to swallow shell and all? and then handed it to Awashonks, she ventured to take a good hearty dram, and passed it among her attendants.

The shell being emptied, he pulled out his tobacco, and having distributed it, they began to talk.

Awashonks demanded of him the reason why he had not (agreeable to his promise when she saw him last) been down at Sogkonate before now, saying that probably if he had come then, according to his promise, they had never joined with Philip against the English.

He told her he was prevented by the war breaking out so suddenly, and yet he was afterwards coming down, and came as far as Punkateese, where a great many Indians set upon him, and fought him a whole afternoon, though he did not come prepared to fight, and had but nineteen men with him, whose chief design was to gain an opportunity to discourse with some Sogkonate Indians. Upon this there at once arose a mighty murmur, confused noise, and talk among the fierce looking creatures, and all rising up in a hubbub; and a great surly looking fellow took up his tomhog, or wooden cutlass, to kill Mr. Church, but some others prevented him.

The interpreter asked Mr. Church, if he understood what it was that the great fellow (they had hold of) said? He answered him, no. Why, said the interpreter, he says, you killed his brother at Punkateese, and therefore he thirsts for your blood. Mr. Church bid the interpreter tell him that his brother began first; that if he had kept at Sogkonate, according to his desire and order, he should not have hurt him.

Then the chief captain commanded silence, and told them, that they should talk no more about old things, &c. and quelled the tumult, so that they sat down again, and began upon a discourse of making peace with the English. Mr. Church asked them, what proposals they would make, and on what terms they would break their league with Philip? Desiring them to make some proposals that he might carry to his masters, telling them that it was not in his power to conclude a peace with them, but that he knew that if their proposals were reasonable, the goverment would not be unreasonable; and that he would use his interest with the government for them; and to encourage them to proceed, put them in mind that the Pequots once made war with the English, and that after they subjected themselves to the English, the English became their protectors, and defended them against other nations that would otherwise have destroyed them, &c. After some further discourse and debate, he brought them at length to consent, that if the government of Plymouth would firmly engage to them, that they, and all of them, and their wives and children, should have their lives spared, and none of them transported out of the country, they would subject themselves to them, and serve them in what they were able.

Then Mr. Church told them, that he was well satisfied the government of Plymouth would readily concur with what was proposed, and would sign their articles: and complimenting them upon it, how pleased he was with the thoughts of their return, and of the former friendship that had between them, &c.

The chief captain rose up, and expressed the great value and respect he had for Mr. Church; and bowing to him said, Sir, if you'll please to except of me and my men, and will head us, we'll fight for you, and will help you to Philip's head before the Indian corn be ripe; and when he had ended, they all expressed their consent to what he said, and told Mr Church they loved him, and were willing to go with him and fight for him, as long as the English had one enemy left in the country.

Mr. Church assured them, that if they proved as good as their word, they should find him their's and their children's fast friend. And (by the way) the friendship is still maintained between them to this day.

Then he proposed unto them, that they should choose five men to go straight with him to Plymouth: they told him no; they would not choose, but he should take which five he pleased; some compliments passed about it, at length it was agreed, they should choose three, and he two. Then he agreed, that he would go back to the island that night, and would come to them the next morning, and go through the woods to Plymouth; but they afterwards objected, that his travelling through the woods would not be safe for him; the enemy might meet with him, and kill him, and then they should lose their friend, and the whole design ruined beside. And therefore proposed, that he should come in an English vessel, and they would meet him, and come on board at Sogkonate point, and sail from thence to Sandwich, which, in fine, was concluded upon.

So Mr. Church promising to come as soon as he could possibly obtain a vessel, and then they parted. He returned to the island, and was at great pains and charge to get a vessel but with unaccountable disappointments, sometimes by the falseness, and sometimes by the faintheartedness of men that he bargained with, and sometimes by wind and weather, &c. until at length Mr. Anthony Low put into the harbour with a laden vessel bound to the westward, and being made acquainted with Mr. Church's case, told him, that he had so much kindness for him, and was so pleased with the business he was engaged in, that he would run the venture of his vessel and cargo, to wait upon him, Accordingly, next morn

ing they set sail with a wind that soon brought them to Sogkonate point; but coming there they met with a contrary wind and a great swelling sea.

The Indians were there waiting upon the rocks, but had nothing but a miserable broken canoe to get aboard in; yet Peter Awashonks ventured off in it, and with a great deal of difficulty and danger got aboard: and by this time it began to rain and blow exceedingly, and forced them up the sound; and then they went away through Bristol ferry, round the island to Newport, carrying Peter with them.

Then Mr. Church dismissed Mr. Low, and told him, that inasmuch as Providence opposed his going by water, and he expected that the army would be up in a few days, and probably if he should be gone at that juncture, it might ruin the whole design; would therefore yield his voyage.

Then he writ the account of his transactions with the Indians, and drew up the proposals and articles of peace, and despatched Peter with them to Plymouth, that his honour the governor, if he saw cause, might sign them.

Peter was sent over to Sogkonate on the Lord's day morning, with orders to take those men that were chosen to go down, or some of them at least with him. The time being expired that was appointed for the English army to come, there was great looking for them. Mr. Church on the Monday morning (partly to divert himself after his fatigue, and partly to listen for the army) rid out with his wife, and some of his friends to Portsmouth, under a pretence of cherrying; but came home without any news from the army: but by midnight or sooner, he was roused with an express from Major Bradford, who was arrived with the army at Pocasset; to whom he forthwith repaired, and informed him of the whole of his proceedings with the Sogkonate Indians. With the major's consent and advice, he returned again next morning to the island, in order to go over that way to Awashonks, to inform her that the army was arrived, &c. Accordingly from Sachueeset neck* he went in a canoe to Sogkonate; told her that Major Bradford was arrived at Pocasset, with a great army, whom he had informed of all his proceedings with her; that if she would be advised and observe order she nor her people need not to fear being hurt by them; told her, she should call all her people down into the neck, lest if they should be found straggling about, mischief might light on them; that on the morrow they would come down and receive her, and give her further orders. She promised to get as many of her people together as possibly she could; desiring Mr. Church to consider that it would be difficult for to get them together at such short warning. Mr. Church returned to the island and to the army the same night. The next morning the whole army marched towards Sogkonate, as far as Punkateese; and Mr. Church with a few men went down to Sogkonate to call Awashonks, and her people to come up to the English camp. As he was going down, they met with a Pocasset Indian; who had killed a cow and got a quarter of her on his back, and her tongue in his pocket; who gave them an account, that he came from Pocasset two days since in company with his mother, and several other Indians, now hid in the swamp above Nomquid;* disarming of him, he sent him by two men to Major Bradford, and proceeded to Sogkonate. They saw several Indians by the way skulking about, but let them pass: arriving at Awashonks camp, told her, he was come to invite her and her people up to Punkateese, where Major Bradford, now was with the Plymouth army, expecting her and her subjects to receive orders, until further order could be had from the government. She complied, and soon sent out orders for such of her subjects as were not with her, immediately to come in; and by twelve o'clock of the next day, she with most of her number appeared before the English camp at Punkateese. Mr. Church tendered the major to serve under his commission, provided the Indians might be accepted with him, to fight the enemy. The major told him, his orders were to improve him, if he pleased, but as for the Indians he would not be concerned with them. And presently gave forth orders for Awashonks, and all her subjects, both men, women and children, to repair to Sandwich, and to be there upon peril, in six days. Awashonks and her chiefs gathered round Mr. Church, (where he was walked off from the rest) expressed themselves concerned that they could not be confided in, nor improved. He told them, it was best to obey orders, and that if he could not accompany them to Sandwich, it should not be above a week before he would meet them there; that he was confident the governor would commission him to improve them. The major hastened to send them away with Jack Havens, (an Indian who had never been in the wars) in the front with a flag of truce in his hand. They being gone, Mr. Church, by the help of his man Toby (the Indian whom he had taken prisoner as he was going to Sogkonate) took said Toby's mother, and those that were with her, prisoners. Next morning the whole army moved back to Pocasset. This Toby informed them that there were a great many Indians gone to Wespoiset to eat Clams, other provisions being very scarce with them, that Philip himself was expected within three or four days at the same place; being asked what Indians they were? he answered some Weetemores Indians, some Mount Hope Indians, some Narraganset Indians, and some other Upland Indians in all about three hundred.

The Rhode Island boats by the major's order, meeting them at Pocasset, they were soon embarked, it being just in the dusk of the evening, they could plainly discover the enemies fires at the place the Indian directed to; and the army concluded no other but they were bound directly thither, until they came to the north end of the island, and heard the word of command for the boats to bear away. Mr. Church was very fond of having this probable opportunity of surprising that whole company of Indians embraced; but orders, it was said, must be obeyed, which was to go to Mount Hope, and there to fight Philip. This with some other good opportunities of doing spoil upon the enemy, being unhappily missed, Mr. Church obtained the major's consent to meet the Sogkonate Indians, according to his promise. He was offered a guard to Plymouth, but chose to go with one man only, who was a good pilot. About sunset he, with Sabin his pilot, mounted their horses at Rehoboth, where the army now was, and by two hours by sun next morning arrived safe at Plymouth; and by that time they had refreshed themselves, the governor and treasurer came to town. Mr. Church giving them a short account of the affairs of the army, &c. His honour was pleased to give him thanks for the good and great service he had done at Sogkonate, told him, he had confirmed all that he had promised Awashonks, and had sent the Indian back again that brought his letter from Awashonks He asked his honour whether he had any thing later from Awashonks? He told him he had not. Whereupon he gave his honour an account of the major's orders relating to her and hers, and what discourse passed *pro* and *con*, about them; and that he had promised to meet them, and that he had encouraged them, that he thought he might obtain of his honour a commission to lead them forth to fight Philip. His honour smilingly told him, that he should not want commission if he would accept it, nor yet good Englishmen enough to make up a good army. But in short, he told his honour the time was expired that he had appointed to meet the Sogkonates at Sandwich. The govenor asked him, when he would go? He told him that afternoon, by his honour's leave. The governor asked him how many men he would have with him? He answered not above half a dozen, with an order to take more at Sandwich, if he saw cause, and horses provided. He no sooner moved it, but had his number of men tendering to go with him, among which were Mr. Jabez Howland, and Nathaniel Southworth; they went to Sandwich that night, where Mr. Church (with need enough) took a nap of sleep. The next morning, with about sixteen or eighteen men, he proceeded as far as Agawom, where they had great expectation of meeting the Indians, but met them not; his men being discouraged about half of them returned: only half a dozen stuck by him, and promised so to do until they should meet with the Indians. When they came to Sippican river,* Mr. Howland began to tire, upon which Mr. Church left him, and two more, for a reserve at the river, that if he should meet with enemies and be forced back, they might be ready to assist them in getting over the river. Proceeding in their march, they crossed another river, and opened a great bay, where they might see many miles along shore, where were sands and flats; and hearing a great noise below them towards the sea, they dismounted their horses, left them and crept among the bushes, until they came near the bank, and saw a vast company of Indians of all ages and sexes, some on horseback running races, some at foot-ball, some catching eels and flat-fish in the water, some clamming, &c., but which way with safety to find out what Indians they were, they were at a loss. But at length retiring into a thicket, Mr. Church hallooed to them; they soon answered him, and a couple of smart young fellows, well mounted, came upon a full career to see who it might be that called, and came just upon Mr. Church before they discovered him; but when they perceived themselves so near Englishmen, and armed, were much surprised, and tacked short about to run as fast back as they came forward, until

one of the men in the bushes called to them, and told them his name was Church, and need not fear his hurting of them. Upon which, after a small pause, they turned about their horses, and came up to him; one of them that could speak English Mr. Church took aside and examined, who informed him, that the Indians below were Awashonks and her company, and that Jack Havens was among them; whom Mr. Church immediately sent for to come to him, and ordered the messenger to inform Awashonks that he was come to meet her; Jack Havens soon came, and by that time Mr. Church had asked him a few questions, and had been satisfied by him, that it was Awashonks and her company that were below, and that Jack had been kindly treated by them. A company of Indians all mounted on horseback, and well armed, came riding up to Mr. Church, but treated him with all due respects. He then ordered Jack to go tell Awashonks, that he designed to sup with her in the evening, and to lodge in her camp that night. Then taking some of the Indians with him, he went back to the river to take care of Mr. Howland. Mr. Church having a mind to try what metal he was made of, imparted his notion to the Indians that were with him, and gave them directions how to act their parts; when he came pretty near the place, he and his Englishmen pretendedly fled, firing on their retreat towards the Indians that pursued them, and they firing as fast after them. Mr. Howland being upon his guard, hearing the guns, and by and by seeing the motion both of the English and Indians, concluded his friends were distressed, was soon on the full career on horseback to meet them, until he perceiving their laughing, mistrusted the truth. As soon as Mr. Church had given him the news, they hastened away to Awashonks Upon their arrival, they were immediately conducted to a shelter, open on one side, whither Awashonks and her chiefs soon came and paid their respects; and the multitude gave shouts as made the heavens to ring.

It being now about sun-setting, or near the dusk of the evening, the Netops came running from all quarters loaden with the tops of dry pines and the like combustible matter, making a huge pile thereof, near Mr. Church's shelter, on the open side thereof; but by this time supper was brought in, in three dishes, viz., a curious young bass in one dish, eels and flat fish in a second, and shell-fish in a third, but neither bread nor salt to be seen at table; but by that time supper was over, the mighty pile of pine knots and tops, &c., was fired, and all the Indians, great and small gathered in a ring round it. Awashonks with the oldest of her people, men and women mixed, kneeling down made the first ring next the fire, and all the lusty stout men standing up made the next, and then all the rabble in a confused crew surrounded on the outside. Then the chief captain stepped in between the rings and the fire, with a spear in one hand, and a hatchet in the other, danced round the fire, and began to fight with it, making mention of all the several nations and companies of Indians in the country that were enemies to the English; and at naming of every particular tribe of Indians, he would draw out and fight a new fire-brand, and at finishing his fight with each particular fire-brand, would bow to him and thank him and when he had named all the several nations and tribes, and fought them all he stuck down his spear and hatchet, and came out; and another stepped in and acted over the same dance, with more fury if possible, than the first; and when about half a dozen of their chiefs had thus acted their parts, the captain of the guard stepped up to Mr. Church and told him, they were making soldiers for him, and what they had been doing was all one swearing of them, and having in that manner engaged all the stout lusty men; Awashonks and her chiefs came to Mr. Church, and told him, that now they were all engaged to fight for the English, and he might call forth all, or any of them at any time as he saw occasion to fight the enemy; and presented him with a very fine firelock. Mr. Church accepts their offer, drew out a number of them, and set out next morning before day for Plymouth, where they arrived the same day.

The governor being informed of it, came early to town next morning, and by that time he had Englishmen enough to make up a good company, when joined with Mr. Church's Indians, that offered their voluntary service, to go under his command in quest of the enemy. The governor then gave him a commission, which is as follows:

"Captain Benjamin Church, you are hereby nominated, ordered, commissioned, and empowered to raise a company of volunteers of about two hundred men, English and Indians; the English not exceeding the number of sixty, of which company, or so many of them as you can obtain, or shall see cause at present to improve, you are to take the command and conduct, and to lead them forth now and hereafter, at such time, and unto such places within this colony, or elsewhere, within the confederate colonies, as you shall think fit; to discover, pursue, fight, surprise, destroy, or subdue our Indian enemies, or any part or parties of them that by the providence of God you may meet with; or them, or any of them, by treaty and composition to receive to mercy, if you see reason (provided they be not murderous rogues, or such as have been principal actors in those villanies:) and forasmuch as your company may be uncertain, and the persons often changed, you are also hereby empowered, with the advice of your company, to choose and commissionate a lieutenant, and to establish sergeants, and corporals as you see cause: And you herein improving your best judgment and discretion and utmost ability, faithfully to serve the interest of God, his majesty's interest, and the interest of the colony; and carefully governing your said company at home and abroad. These shall be unto you full and ample commission, warrant and discharge. Given under the public seal, this 24th day of July, 1676.

Per JOS. WINSLOW, Gov.

Receiving commission, he marched the same night into the woods, got to Middleborough before day, and as soon as the light appeared, took into the woods and swampy thickets, towards a place where they had some reason to expect to meet with a parcel of Narraganset Indians, with some others that belonged to Mount-Hope. Coming near to where they expected them, Captain Church's Indian scout discovered the enemy, and well observing their fires, and postures returned with the intelligence to their captain, who gave such directions for the surrounding of them, as had the desired effect; surprising them from every side so unexpectedly, that they were all taken, not so much as one escaped. And upon a strict examination, they gave intelligence of another parcel of the enemy, at a place called Munponset-Pond. Captain Church hastened with his prisoners through the woods to Plymouth, disposed of them all, excepting only one Jeffery, who proving very ingenuous and faithful to him, in informing where other parcels of Indians harboured; Captain Church promised him, that if he continued to be faithful to him, he should not be sold out of the country, but should be his waiting man, to take care of his horse, &c. and accordingly he served him faithfully as long as he lived.

But Captain Church was forthwith sent out again, and the terms for his encouragement being concluded on, viz., That the country should find them ammunition and provision, and have half the prisoners and arms they took: the captain and his English soldiers to have the other half of the prisoners and arms, and the Indian soldiers the loose plunder. Poor encouragement! But after some time it was mended.

They soon captured the Munponsets, and brought them in, not one escaping. This stroke he held several weeks, never returning empty handed. When he wanted intelligence of their kennelling places, he would march to some place likely to meet with some travellers or ramblers, and scattering his company, would lie close; and seldom lay above a day, or two, at the most, before some of them would fall into their hands, whom he would compel to inform where their company was; and so by his method of secret and sudden surprises took great numbers of them prisoners.

The government observing his extraordinary courage and conduct, and the success from heaven added to it, saw cause to enlarge his commission; gave him power to raise and dismiss his forces, as he should see occasion; to commissionate officers under him, and to march as far as he should see cause, within the limits of the three united colonies: To receive to mercy, give quarter, or not; excepting some particular and noted murderers: viz. Philip and all that were at the destroying of Mr. Clark's garrison, and some few others.

Major Bradford being now at Taunton with his army, and wanting provisions, some carts were ordered from Plymouth for their supply, and Captain Church to guard them; but he obtained other guards for the carts, as far as Middleborough, ran before with a small company, hoping to meet with some of the enemy, appointing the carts and their guards to meet with them at Nemas

cut,* about an hour after sun's rising next morning; he arrived there about the breaking of the daylight, discovered a company of the enemy; but his time was too short to wait for gaining advantage, and therefore ran right in upon them, surprised and captivated about 16 of them, who, upon examination, informed, that Tispaquin, a very famous captain among the enemy was at Assawompset,† with a numerous company.

But the carts must now be guarded, and the opportunity of visiting Tispaquin must now be laid aside: The carts are to be faithfully guarded, lest Tispaquin should attack them.

Coming towards Taunton, Captain Church taking two men with him, made all speed to the town; and coming to the river side, he hallooed, and inquiring of them that came to the river, for Major Bradford, or his captains; he was informed they were in the town, at the tavern.—He told them of the carts that were coming, that he had the cumber of guarding them, which already prevented his improving opportunities of doing service.—Prayed therefore that a guard might be sent over to receive the carts, that he might be at liberty; refusing all invitations and persuasions to go over to the tavern to visit the major: he at length obtained a guard to receive the carts; by whom also he sent his prisoners, to be conveyed with the carts, to Plymouth, directing them not to return by the way they came, but by Bridgwater.

Hastening back, he proposed to camp that night at Assawompset neck. But as soon as they came to the river that runs into the great pond through the thick swamp, at the entering of the neck, the enemy fired upon them, but hurt not a man. Captain Church's Indians ran right into the swamp, and fired upon them, but it being in the dusk of the evening, the enemy made their escape in the thickets: the captain then moving about a mile into the neck, took the advantage of a small valley to feed his horses; some held the horses by the bridles, the rest on the guard looked sharp out for the enemy, within hearing on every side, and some very near; but in the dead of the night, the enemy being out of hearing, or still, Captain Church moved out of the neck, (not the same way he came in, lest he should be ambuscadoed) towards Cushnet,‡ where all the houses were burnt; and crossing Cushnet river, being extremely fatigued with two nights and one day's ramble without rest or sleep; and observing good forage for their horses, the captain concluded upon baiting, and taking a nap: setting six men to watch the passage of the river, two to watch at a time, while the others slept, and so to take their turns, while the rest of the company went into a thicket, to sleep under the guard of two sentinels more. But the whole company being very drowsy, soon forgot their danger, and were fast asleep, sentinels and all. The captain first awakes, looks up, and judges he had slept four hours, which being longer than he designed, immediately rouses his company, and sends away a file to see what was become of the watch at the passage of the river, but they no sooner opened the river in sight, but they discovered a company of the enemy viewing of their tracks, where they came into the neck; Captain Church, and those with him, soon dispersed into the brush on each side of the way, while the file sent got undiscovered to the passage of the river, and found their watch all fast asleep: but these tidings thoroughly awakened the whole company. But the enemy giving them no present disturbance, they examined their knapsacks, and taking a little refreshment, the captain orders one party to guard the horses, and the other to scout, who soon met with a track, and following of it, they were brought to a small company of Indians who proved to be Little Eyes, and family, and near relations, who were of Sogkonate, but had forsaken their countrymen, upon their making peace with the English. Some of Captain Church's Indians asked him, If he did not know this fellow? Told him, this is the rogue that would have killed you at Awashonk's dance; and signified to him that now he had an opportunity to be revenged on him. But the captain told them, it was not Englishmen's fashion to seek revenge; and that he should have the same quarter the rest had. Moving to the river side, they found an old canoe, with which the captain ordered Little Eyes and his company to be carried over to an island; telling him, he would leave him on that island until he returned; and lest the English should light on them, and kill them, he would leave his cousin Light-foot (whom the English knew to be their friend) to be his guard. Little Eyes expressed himself very thankful to the captain. He leaving his orders with Light-foot, returns to the river side, towards Poneganset, to Russell's orchard; coming near the orchard, they clapped into a thicket, and there lodged the rest of the night without any fire; and upon the morning light appearing, moves towards the orchard, discovers some of the enemy, who had been there the day before, and had beat down all the apples, and carried them away; discovered also where they had lodged that night, and saw the ground where they set their baskets bloody, being, as they supposed, and as it was afterwards discovered to be, with the flesh of swine, &c. which they had killed that day. They had lain under the fences without any fires, and seemed, by the marks they left behind them, to be very numerous; perceived also by the dew on the grass, that they had not been long gone; and therefore moved apace in pursuit of them. Travelling three miles, or more, they came into the country road, where the track parted, one parcel steered towards the west end of the great cedar swamp, and the other to the east end. The captain halted, and told his Indian soldiers, that they had heard, as well as he, what some men had said at Plymouth, about them, &c. That now was a good opportunity for each party to prove themselves: the track being divided, they should follow one, and the English the other, being equal in number. The Indians declined the motion, and were not willing to move anywhere without him; said, they should not think themselves safe without him. But the captain insisting upon it, they submitted; he gave the Indians their choice to follow which track they pleased; they replied, they were light, and able to travel; therefore, if he pleased, they would take the west track. And appointing the ruins of John Cook's house at Cushnet, for the place to meet at, each company set out briskly to try their fortunes. Captain Church, with his English soldiers, followed their track until they came near entering a miry swamp, when the captain heard a whistle in the rear, (which was a note for a halt) looking behind him, he saw William Fobes start out of the company and make towards him, who hastened to meet him as fast as he could: Fobes told him they had discovered abundance of Indians, and if he pleased to go a few steps back he might see them himself: he did so, and saw them across the swamp, observing them, he perceived they were gathering whortle-berries, and that they had no apprehensions of their being so near them; the captain supposed them to be chiefly women, and therefore calling out Mr. Dillano, who was acquainted with the ground, and the Indian language, and another named Mr. Barns; with these two men he takes right through the swamp as fast as he could, and orders the rest to hasten after them. Captain Church, with Dillano and Barns, having good horses, spurred on, and were soon amongst the thickest of the Indians, and out of sight of their own men. Among the enemy was an Indian woman, who with her husband had been drove off from Rhode Island, notwithstanding they had an house upon Mr. Sanford's land, and had planted an orchard before the war; yet the inhabitants would not be satisfied till they were sent off; and Captain Church, with his family, living then at the said Sanford's, came acquainted with them, who thought it very hard to turn off such old quiet people: but in the end it proved a providence and an advantage to him and his family, as you may see afterwards. This Indian woman knew Captain Church, and as soon as she knew him, held up both her hands, and came running towards him, crying aloud, Church, Church, Church. Captain Church bid her stop the rest of the Indians, and tell them, the way to save their lives was not to run, but yield themselves prisoners, and he would not kill them; so with her help and Dillano's, who could call to them in their own language, many of them stopped and surrendered themselves, others scampering and casting away their baskets, &c., betook themselves to the thickets, but Captian Church being on horse back, soon came up with them, and laid hold of a gun that was in the hand of one of the foremost of the company, pulled it from him, and told him he must go back. And when he had turned them, he began to look about him to see where he was, and what was become of his company, hoping they might be all as well employed as himself, but could find none but Dillano, who was busy gathering up prisoners. The captain drove his that he had stopped to the rest, inquiring of Dillano for their company, but could have no news of them; but moving back picked up now and then a skulking prisoner by the way. When they came near the place where they first started the Indians, they discovered their company standing in a body together, and had taken some few prisoners; when

* New Raynham † In Middleborough. ‡ In Dartmouth.

they saw their captain they hastened to meet him: they told him they found it difficult getting through the swamp, and neither seeing nor hearing any thing of him, they concluded the enemy had killed him, and were at a great loss what to do.

Having brought their prisoners together they found they had taken and killed sixty-six of the enemy. Captain Church then asked the old squaw, what company they belonged unto? She said, they belonged part to Philip, and part to Qunnappin and the Narraganset Sachem, discovered also, upon her declaration, that both Philip and Qunnappin were about two miles off, in the great cedar swamp; he inquired of her, what company they had with them? She answered, abundance of Indians. The swamp, she said, was full of Indians from one end unto the other, that were settled there, that there were near a hundred men came from the swamp with them, and left them upon that plain to gather whortle-berries, and promised to call them as they came back out of Sconticut-Neck; whither they went to kill cattle and horses for provisions for the company. She, perceiving Captain Church move towards the neck, told him, if they went that way they would all be killed. He asked her, whereabout they crossed the river? She pointed to the upper passing place. Upon which Captain Church passed over so low down as he thought it not probable they should meet with his track in their return; and hastened towards the island, where he left Little Eyes with Light-foot. Finding a convenient place by the river side for securing his prisoners, Captain Church and Mr. Dillano went down to see what was become of Captain Light-foot, and the prisoners left in his charge. Light-foot seeing and knowing them, soon came over with his broken canoe, and informed them, that he had seen that day about one hundred men of the enemy go down into Sconticut-Neck, and that they were now returning again: upon which they three ran down immediately to a meadow where Light-foot said the Indians had passed, where they not only saw their tracks, but also them: whereupon they lay close until the enemy came into the said meadow, and the foremost set down his load and halted, until all the company came up, and then took up their loads and marched again the same way that they came down into the neck, which was the nearest way unto their camp; had they gone the other way along the river, they could not have missed Captain Church's tracks, which would doubtless have exposed them to the loss of their prisoners, if not of their lives. But as soon as the coast was clear of them, the captain sends his Light-foot to fetch his prisoners from the island, while he and Mr. Dillano returns to the company, sent part of them to conduct Light-foot and his company to the aforesaid meadow, where Captain Church and his company met them. Crossing the enemies' track they made all haste until they got over Mattapoiset river,* near about four miles beyond the ruins of Cook's house, where he appointed to meet his Indian company, whither he sent Dillano with two more to meet them; ordering them, that if the Indians were not arrived to wait for them. Accordingly, finding no Indians there, they waited until late in the night, when they arrived with their booty. They dispatched a post to their captain, to give him an account of their success; but the day broke before they came to him; and when they had compared successes, they very remarkably found that the number that each company had taken and slain, was equal. The Indians had killed three of the enemy, and taken sixty-three prisoners,as the English had done before them. Both English and Indians were surprised at this remarkable providence, and were both parties rejoicing at it; being both before afraid of what might have been the unequal success of the parties; but the Indians had the fortune to take more arms than the English. They told the captain, that they had missed a brave opportunity by parting; they came upon a great town of the enemy, viz. Captain Tyasks' company, (Tyasks was the next man to Philip.) They fired upon the enemy before they were discovered, and ran upon them with a shout; the men ran and left their wives and children, and many of them their guns. They took Tyasks' wife and son, and thought that if their captain and the English company had been with them they might have taken some hundreds of them; and now they determined not to part any more.

That night Philip sent (as afterwards they found out) a great army to waylay Captain Church at the entering of Assawompset-Neck, expecting he would have returned the same way he went in; but that was never his method to return the same way that he came; and at this time going another way, he escaped falling into the hands of his enemies. The next day they went home by Scipican, and got well with their prisoners to Plymouth.

He soon went out again, and this stroke he drove many weeks; and when he took any number of prisoners, he would pick out some he took a fancy to, and would tell them, he took a particular fancy to them, and had chose them for himself to make soldiers of; and if any would behave themselves well, he would do well by them, and they should be his men, and not sold out of the country. If he perceived they looked surly, and his Indian soldiers called them treacherous dogs, as some of them would sometimes do, all the notice he would take of it, would only be to clap them on the back, and tell them, come, come, you look wild and surly, and mutter, but that signifies nothing, these my best soldiers were a little while ago as wild and surly as you are now; by that time you have been but one day along with me, you'll love me too, and be as brisk as any of them And it proved so; for there was none of them but (after they had been a little while with him, and seen his behaviour, and how cheerful and successful his men were) would be as ready to pilot him to any place where the Indians dwelt, or haunted (though their own fathers or nearest relations should be among them) or to fight for him, as any of his own men.

Captain Church was in two particulars much advantaged by the great English army that was now abroad. One was, that they drove the enemy down to that part of the country, viz. to the eastward of Taunton river, by which his business was nearer home. The other was, that when he fell on with a push upon any body of the enemy (were they never so many) they fled, expecting the great army. And his manner of marching through the woods was such, as if he were discovered, they appeared to be more than they were; for he always marched at a wide distance one from another, partly for their safety: And this was an Indian custom to march thin and scattered. Captain Church inquired of some of the Indians that were become his soldiers, how they got such advantage often of the English in their marches through the woods? They told him, that the Indians gained great advantage of the English by two things; the Indians always took care in their marches and fights, not to come too thick together; but the English always kept in a heap together, that it was as easy to hit them as to hit a house. The other was, that if at any time they discovered a company of English soldiers in the woods, they knew that there was all, for the English never scattered; but the Indians always divided and scattered.

Captain Church now at Plymouth, something or other happened that kept him at home a few days, until a post came to Marshfield on the Lord's day morning, informing the governor that a great army of Indians were discovered, who it was supposed were designing to get over the river towards Taunton or Bridgwater, to attack those towns that lay on that side of the river. The governor hastened to Plymouth, raised what men he could by the way, came to Plymouth in the beginning of the forenoon exercise; sent for Captain Church out of the meeting-house, gave him the news, and desired him immediately to rally what of his company he could; and what men he had raised should join them. The captain bestirs himself, but found no bread in the store-house, and so was forced to run from house to house to get household bread for their march; but this nor anything else prevented his marching by the beginning of the afternoon exercise. Marching with what men were ready, he took with him the post that came from Bridgwater to pilot him to the place, where he thought he might meet with the enemy. In the evening they heard a smart firing at a distance from them; but it being near night, and the firing but of short continuance, they missed the place, and went into Bridgwater town. It seems the occasion of the firing was, that Philip finding that Captain Church made that side of the country too hot for him, designed to return to the other side of the country that he came last from. And coming to Taunton river with his company, they felled a great tree across the river, for a bridge to pass over on; and just as Philip's old uncle Akkompoin, and some other of his chiefs were passing over the tree, some brisk Bridgwater lads had ambushed them, fired upon them, and killed the old man, and several others, which put a stop to their coming over the river that night.

Next morning Captain Church moved very early with his company, which was increased by many of Bridgwater, that enlisted under him for that expedition, and, by their piloting, soon came very still to the top of

* In Rochester.

the great tree which the enemy had fallen across the river; and the captain spied an Indian sitting on the stump of it on the other side of the river, and he clapped his gun up, and had doubtless despatched him, but that one of his own Indians called hastily to him, not to fire, for he believed it was one of their own men; upon which the Indian upon the stump looked about, and Captain Church's Indian seeing his face perceived his mistake, for he knew him to be Philip, clapped up his gun and fired, but it was too late, for Philip immediately threw himself off the stump, leaped down a bank on the side of the river, and made his escape. Captain Church, as soon as possible, got over the river, and scattered in quest of Philip and his company; but the enemy scattered and fled every way; but he picked up a considerable many of their women and children, among which was Philip's wife, and son of about nine years old. Discovering a considerable new track along the river, and examining the prisoners, found it was Qunnappin and the Narragansets, that were drawing off from those parts towards the Narraganset country; he inquired of the prisoners, whether Philip was gone in the same track? They told him they did not know, for he fled in a great fright when the first English gun was fired, and they had none of them seen or heard anything of him since. Captain Church left part of his company there to secure the prisoners they got, and to pick up what more they could find; and with the rest of his company hastened in the track of the enemy, to overtake them, if it might be, before they got over the river, and ran some miles along the river, until he came to a place where the Indians had waded over; and he with his company waded over after them up to the arm-pits; being almost as wet before with sweat as the river could make them. Following about a mile further, and not overtaking them, and the captain being under necessity to return that night to the army, came to a halt, told his company, he must return to his other men. His Indian soldiers moved for leave to pursue the enemy (though he returned;) said, the Narragansets were great rogues, and they wanted to be revenged on them for killing some of their relations; named Tockamona, (Awashonk's brother) and some others. Captain Church bid them go and prosper, and made Lightfoot their chief, and gave him the title of captain: Bid them go and quit themselves like men. And away they scampered like so many horses. Next morning early they returned to their captain, and informed him, that they had come up with the enemy, and killed several of them, and brought him thirteen of them prisoners; were mighty proud of their exploit, and rejoiced much at the opportunity of avenging themselves. Captain Church sent the prisoners to Bridgwater, and sent out his scouts to see what enemies or tracks they could, discovering some small tracks, he follows them, found where the enemy had kindled some fires, and roasted some flesh, &c., but had put out their fires and were gone. The captain followed them by the track, putting his Indians in the front; some of which were such as he had newly taken from the enemy, and added to his company. Gave them orders to march softly, and upon hearing a whistle in the rear, to sit down, till further order: or, upon discovery of any of the enemy, to stop, for his design was, if he could discover where the enemy were, not to fall upon them (unless necessitated to it) until next morning. The Indians in the front came up with many women and children, and others that were faint and tired, and so not able to keep up with the company; these gave them an account that Philip with a great number of the enemy, were a little before. Captain Church's Indians told the others, they were their prisoners, but if they would submit to order, and be still, no one should hurt them: they being their old acquaintance, were easily persuaded to conform. A little before sunset there was a halt in the front, until the captain came up, they told him, they discovered the enemy. He ordered them to dog them, and watch their motion till it was dark. But Philip soon came to a stop, and fell to breaking and chopping wood, to make fires; and a great noise they made. Captain Church draws his company up in a ring, and sat down in the swamp without any noise or fire. The Indian prisoners were much surprised to see the English soldiers; but the captain told them, if they would be quiet and not make any disturbance or noise, they should meet with civil treatment; but if they made any disturbance, or offered to run, or make their escape, he would immediately kill them all; so they were very submissive and obsequious. When the day broke, Captain Church told his prisoners, that his expedition was such at this time that he could not afford them any guard: told them, they would find it to be their interest to attend the orders he was now about to give them; which was, that when the fight was over, which they now expected, or as soon as the firing ceased, they must follow the track of his company, and come to them. (An Indian is next to a blood-hound to follow a track.) He said to them, it would be in vain for them to think of disobedience, or to gain any thing by it, for he had taken and killed a great many of the Indian rebels, and should in a little time kill and take all the rest, &c. By this time it began to be so light, as the time that he usually chose to make his onset. He moved, sending two soldiers before, to try if they could privately discover the enemies' postures. But very unhappily it fell out, that the very same time Philip had sent two of his as a scout upon his own track, to see if none dogged them; who spied the two Indian men, and turned short about, and fled with all speed to their camp, and Captain Church pursued as fast as he could. The two Indians set a yelling and howling, and made the most hideous noise they could invent, soon gave the alarm to Philip and his camp; who all fled at the first tidings, left their kettles boiling, and meat roasting upon their wooden spits, and ran into a swamp with no other breakfast than what Captain Church afterwards treated them with. Captain Church pursuing, sent Mr. Isaac Howland with a party on one side of the swamp, while himself with the rest ran on the other side, agreeing to run on each side, until they met on the further end, placing some men in secure stands at that end of the swamp where Philip entered, concluding that if they headed him and beat him back, that he would take back in his own track. Captain Church and Mr. Howland soon met at the further end of the swamp, (it not being a great one) where they met with a great number of the enemy, well armed, coming out of the swamp; but, on sight of the English, they seemed very much surprised and tacked short. Captain Church called hastily to them, and said, if they fired one gun they were all dead men; for he would have them to know that he had them hemmed in, with a force sufficient to command them; but if they peaceably surrendered they should have good quarter, &c. They, seeing both Indians and English come so thick upon them, were so surprised that many of them stood still and let the English come and take the guns out of their hands, when they were both charged and cocked.

Many, both men, women, and children of the enemy, were imprisoned at this time, while Philip, Tispaquin, Totoson, &c., concluded that the English would pursue them upon their tracks, so were waylaying their tracks at the first end of the swamp, hoping thereby to gain a shot upon Captain Church who was now better employed in taking prisoners, and running them into a valley, in form shaped something like a punch-bowl and appointing a guard of two files, treble armed with guns taken from the enemy. But Philip having waited all this while in vain, now moves on after the rest of his company, to see what was become of them. And by this time Captain Church was got into the swamp ready to meet him; and as it happened made the first discovery, clapped behind a tree until Philip's company came pretty near, and then fired upon them, killed many of them, and a close skirmish followed. Upon this Philip, having grounds sufficient to suspect the event of his company that went before them, fled back upon his own track; and coming to the place where the ambush lay, they fired on each other, and one Lucus, of Plymouth, not being so careful as he might have been about his stand, was killed by the Indians. In this swamp-skirmish Captain Church with his two men, who always run by his side as his guard, met with three of the enemy, two of which surrendered themselves, and the captain's guard seized them; but the other, being a great, stout, surly fellow, with his two locks tied up with red, and a great rattle-snake skin hanging to the back part of his head, (whom Captain Church concluded to be Totoson) ran from them into the swamp; Captain Church in person, pursued him close, till coming pretty near up with him, presented his gun between his shoulders, but it missing fire, the Indian perceiving it, turned and presented at Captain Church, and missing fire also, (their guns taking wet with the fog and dew of the morning;) but the Indian turning short for another run, his foot tripped in a small grape-vine and he fell flat on his face; Captain Church was by this time up with him, and struck the muzzle of his gun an inch and a half into the back part of his head, which despatched him without another blow. But Captain Church looking behind him, saw Totoson, the Indian whom

he thought he had killed, come flying at him like a dragon; but this happened to be fair in sight of the guard that were set to keep the prisoners, who, spying Totoson and others that were following him, in the very seasonable juncture made a shot upon them, and rescued their captain; though he was in no small danger from his friends' bullets, for some of them came so near him that he thought he felt the wind of them. The skirmish being over, they gathered their prisoners together, and found the number they had killed and taken was one hundred and seventy-three, (the prisoners which they took over night included) who after the skirmish, came to them as they were ordered.

Now having no provisions but what they took from the enemy, they hastened to Bridgwater, sending an express before to provide for them, their company being now very numerous. The gentlemen of Bridgwater met Captain Church with great expressions of honor and thanks, and received him and his army with all due respect and kind treatment.

Captain Church drove his prisoners that night into Bridgwater pound, and set his Indian soldiers to guard them. They being well treated with victuals and drink, they had a merry night; and the prisoners laughed as loud as the soldiers, not being so treated a long time before.

Some of the Indians now said to Captain Church, Sir, you have now made Philip ready to die, for you have made him as poor and miserable as he used to make the English; for you have now killed or taken all his relations. That they believed he would now soon have his head, and that this bout had almost broke his heart.

The next day Captain Church moved and arrived with all his prisoners safe at Plymouth. The great English army was now at Taunton, and Major Talcot, with the Connecticut forces, being in these parts of the country, did considerable spoil upon the enemy.

Now Captain Church being arrived at Plymouth received thanks from the government for his good service, &c.; many of his soldiers were disbanded; and he thought to rest himself awhile, being much fatigued, and his health impaired by excessive heats and colds, and wading through rivers, &c. But it was not long before he was called upon to rally, upon advice that some of the enemy were discovered in Dartmouth woods. He took his Indians, and as many English volunteers as presented, to go with him; and scattering into small parcels, Mr. Jabez Howland (who was now, and often, his lieutenant, and a worthy good soldier) had the fortune to discover and imprison a parcel of the enemy. In the evening they met together at an appointed place, and by examining the prisoners, they gained intelligence of Totoson's haunt; and being brisk in the morning, they soon gained an advantage of Totoson's company, though he himself with his son of about eight years old made their escape, and one old squaw with them, to Agawom, his own country; but Sam Barrow, as noted a rogue as any among the enemy, fell into the hands of the English at this time. Captain Church told him, that because of his inhuman murders and barbarities, the court had allowed him no quarter, but was to be forthwith put to death, and therefore he was to prepare for it. Barrow replied, that the sentence of death against him was just, and that indeed he was ashamed to live any longer, and desired no more favour than to smoke a whiff of tobacco before his execution. When he had taken a few whiffs, he said he was ready; upon which one of Captain Church's Indians sunk his hatchet into his brains. The famous Totoson arriving at Agawom,* his son, which was the last that was left of the family, (Captain Church having destroyed all the rest) fell sick; the wretch, reflecting upon the miserable condition he had brought himself into, his heart became a stone within him, and died. The old squaw flung a few leaves and brush over him, and came into Sandwich, and gave this account of his death, and offered to show them where she left his body; but never had the opportunity, for she immediately fell sick and died also.

Captain Church being now at Plymouth again, weary and worn, would have gone home to his wife and family, but the government being solicitous to engage him in the service until Philip was slain, and promising satisfaction and redress for some mistreatment that he had met with; he fixes for another expedition. He had soon volunteers enough to make up the company he desired, and marched through the woods until he came to Pocasset; and not seeing or hearing of any of the enemy they went over the ferry to Rhode-Island, to refresh themselves. The captain with about half a dozen in his company, took horse and rid about eight miles down the island, to Mr. Sanford's, where he had left his wife; who no sooner saw him but fainted with surprise; and by that time she was a little revived, they spied two horsemen coming a great pace. Captain Church told his company that those men (by their riding) came with tidings. When they came up they proved to be Major Sandford and Captain Golding; who immediately asked Captain Church, what he would give to hear some news of Philip? He replied, that was what he wanted. They told him, they had rid hard with some hopes of overtaking him, and were now come on purpose to inform him, that there was just now tidings from Mount-Hope; an Indian came down from thence (where Philip's camp now was) on to Sand-point, over against Trip's and hallooed, and made signs to be fetched over; and being fetched over, he reported that he was fled from Philip, who (said he) has killed my brother just before I came away, for giving some advice that displeased him. And said, he was fled for fear of meeting with the same his brother had met with. Told them also, that Philip was now in Mount-Hope neck. Captain Church thanked them for their good news, and said, he hoped by to-morrow morning to have the rogue's head. The horses that he and his company came on, standing at the door, (for they had not been unsaddled) his wife must content herself with a short visit, when such game was ahead; they immediately mounted, set spurs to their horses, and away.

* Several places were called Agawom; as at Ipswich, and Springfield. This Agawom lies in Wareham.

The two gentlemen that brought him the tidings, told him, they would gladly wait upon him to see the event of the expedition; he thanked them, and told them, he should be as fond of their company as any men's; and (in short) they went with him. And they were soon at Trip's ferry (with Captain Church's company) where the deserter was, who was a fellow of good sense, and told his story handsomely. He offered Captain Church to pilot him to Philip, and to help to kill him, that he might revenge his brother's death. Told him, that Philip was now upon a little spot of upland, that was in the south end of the miry swamp, just at the foot of the Mount, which was a spot of ground that Captain Church was well acquainted with. By that time they were got over the ferry, and came near the ground, half the night was spent. The captain commands a halt, and bringing the company together, he asked Major Sandford's and Captain Golding's advice, what method was best to take in making the onset, but they declined giving him any advice, telling him, that his great experience and success forbid their taking upon them to give advice. Then Captain Church offered Captain Golding that he should have the honour (if he would please to accept of it) to beat up Philip's head quarters. He accepted the offer, and had his allotted number drawn out to him, and the pilot. Captain Church's instructions to him were, to be very careful in his approach to the enemy, and be sure not to show himself until by daylight they might see and discern their own men from the enemy; told him also, that his custom in like cases was, to creep with his company on their bellies, until they came as near as they could; and that as soon as the enemy discovered them they would cry out; and that was the word for his men to fire and fall on. Directed him when the enemy should start and take into the swamp, they should pursue with speed, every man shouting and making what noise they could; for he would give orders to his ambuscade to fire on any that should come silently.

Captain Church knowing that it was Philip's custom to be foremost in the flight, went down to the swamp, and gave Captain Williams of Scituate the command of the right wing of the ambush, and placed an Englishman and an Indian together behind such shelters of trees, &c., that he could find, and took care to place them at such distance that none might pass undiscovered between them, charged them to be careful of themselves, and of hurting their friends, and to fire at any that should come silently through the swamp; but being somewhat further through the swamp than he was aware of, he wanted men to make up his ambuscade. Having placed what men he had, he took Major Sandford by the hand, said, Sir, I have so placed them that it is scarce possible Philip should escape them. The same moment a shot whistled over their heads, and then the noise of a gun towards Philip's camp. Captain Church at first thought it might be some gun fired by accident; but before he could speak, a whole volley followed, which was earlier than he expected. One of Philip's gang going forth to ease himself,

when he had done, looked round him, and Captain Golding thought the Indian looked right at him, (though probably it was but his conceit) so fired at him, and upon his firing the whole company that were with him fired upon the enemies' shelter, before the Indians had time to rise from their sleep, and so overshot them. But their shelter was open on that side next the swamp, built so on purpose for the convenience of flight on occasion. They were soon in the swamp, and Philip the foremost, who starting at the first gun, threw his petunk, and powder-horn over his head, catched up his gun, and ran as fast as he could scamper, without any more clothes than his small breeches and stockings, and ran directly on two of Captain Church's ambush; they let him come fair within shot, and the Englishman's gun missing fire, he bid the Indian fire away, and he did so to purpose, sent one musket bullet through his heart, and another not above two inches from it; he fell upon his face in the mud and water with his gun under him. By this time the enemy perceived they were waylaid on the east side of the swamp, tacked short about. One of thee nemy, who seemed to be a great, surly old fellow, hallooed with a loud voice, and often called out, Iootash, Iootash. Captain Church called to his Indian, Peter, and asked him who that was that called so? He answered, it was old Annawon, Philip's great captain, calling on his soldiers to stand to it, and fight stoutly. Now the enemy finding that place of the swamp which was not ambushed, many of them made their escape in the English tracks. The man that had shot down Philip, ran with all speed to Captain Church, and informed him of his exploit, who commanded him to be silent about it, and let no man more know it, until they had drove the swamp clean; but when they had drove the swamp through, and found the enemy had escaped, or at least the most of them, and the sun now up, and so the dew gone, that they could not easily track them, the whole company met together at the place where the enemies night-shelter was; and then Captain Church gave them the news of Philip's death; upon which the whole army gave three loud huzzas. Captain Church ordered his body to be pulled out of the mire on to the upland, so some of Captain Church's Indians took hold of him by his stockings, and some by his small breeches, (being otherwise naked) and drew him through the mud to the upland, and a doleful, great, naked, dirty beast he looked like. Captain Church then said, that forasmuch as he had caused many an Englishman's body to be unburied, and to rot above ground, that not one of his bones should be buried. And calling his old Indian executioner, bid him behead and quarter him; accordingly he came with his hatchet and stood over him, but before he struck he made a small speech, directing it to Philip, and said, he had been a very great man, and had made many a man afraid of him, but so big as he was he would now chop his arse for him; and so he went to work, and did as he was ordered. Philip having one very remarkable hand, being much scarred, occasioned by the splitting of a pistol in it formerly; Captain Church gave the head and that hand to Alderman, the Indian who shot him, to show to such gentlemen as would bestow gratuities upon him; and accordingly he got many a penny by it.

This being on the last day of the week, the captain with his company returned to the island, tarried there until Tuesday; and then went off and ranged through all the woods to Plymouth, and received their premium, which was thirty shillings per head, for the enemies which they had killed or taken, instead of all wages; and Philip's head went at the same price. Methinks it is scanty reward and poor encouragement; though it was better than what had been for some time before. For this march they received four shillings and sixpence a man, which was all the reward they had, except the honour of killing Philip. This was in the latter end of August, 1676.

Captain Church had been but a little while at Plymouth, before a post from Rehoboth came to inform the government, that old Annawon, Philip's chief captain, was with his company ranging about their woods, and was very offensive and pernicious to Rehoboth and Swansey. Captain Church was immediately sent for again, and treated with to engage in one expedition more; he told them, their encouragement was so poor, he feared his soldiers would be dull about going again; but being a hearty friend to the cause, he rallies again, goes to Mr. Jabez Howland, his old lieutenant, and some of his soldiers that used to go out with him; told them how the case was circumstanced, and that he had intelligence of old Annawon's walk and haunt, and wanted hands to hunt him; they did not want much entreating, but told him, they would go with him, as long as there was an Indian left in the woods. He moved and ranged through the woods to Pocasset.

It being the latter end of the week, he proposed to go on to Rhode Island, and rest until Monnay; but on the Lord's day morning, there came a post to inform the captain, that early the same morning a canoe with several Indians in it passed from Prudence Island to Poppasquash-Neck.* Captain Church thought, if he could possibly surprise them, he might probably gain some intelligence of more game; therefore he made all possible speed after them. The ferry-boat being out of the way, he made use of canoes; by that time they had made two freights, and had got over the captain, and about fifteen or sixteen of his Indians, the wind sprung up with such violence that canoes could no more pass. The Captain seeing it was impossible for any more of his soldiers to come to him, he told his Indians, if they were willing to go with him, he would go to Poppasquash, and see if they could catch some of the enemy Indians. They were willing to go, but were sorry they had no English soldiers; so they marched through the thickets that they might not be discovered, until they came unto the salt meadow, to the northward of Bristol town, that now is. Then they heard a gun, the captain looked about, not knowing but it might be some of his own company in the rear; so halting till they all came up, he found it was none of his own company that fired. Now though he had but a few men, was minded to send some of them out on a scout. He moved it to Captain Light-foot to go with three more on a scout; he said he was willing, provided the captain's man Nathaniel, (which was an Indian they had lately taken) might be one of them, because he was well acquainted with the neck, and coming lately from among them, knew how to call them. The captain bid him choose his three companions, and go; and if they came across any of the enemy, not to kill them if they could possibly take them alive; that they might gain intelligence concerning Annawon. The captain with the rest of his company moved but a little way further toward Poppasquash, before they heard another gun, which seemed to be the same way with the other, but further off; but they made no halt until they came on to the narrow of Poppasquash Neck; where Captain Church left three men more, to watch if any should come out of the neck, and to inform the scout when they returned which way he was gone.

He parted the remainder of his company, half on one side of the neck, and the other with himself went on the other side of the neck, until they met; and meeting neither with Indians nor canoes, returned big with expectations of tidings by their scout; but when they came back to the three men at the narrow of the neck, they told their captain the scout was not returned, had heard nor seen anything of them: this filled them with thoughts of what should become of them; by the time they had sat and waited an hour longer, it was very dark, and they despaired of their returning to them. Some of the Indians told their captain, they feared his new man Nathaniel had met with his old Mount-Hope friends, and was turned rogue. They concluded to make no fires that night (and indeed they had no great need of any) for they had no victuals to cook, had not so much as a morsel of bread with them.

They took up their lodging scattering, that if possibly their scout should come in the night, and whistle (which was their sign) some or other of them might hear them They had a very solitary, hungry night; and as soon as the day broke they drew off through the brush to a hill without the neck, and looking about them they espied one Indian man come running somewhat towards them; the captain ordered one man to step out and shew himself. Upon this the Indian ran right to him, and who should it be but Captain Light-foot, to their great joy. Captain Church asked him, what news? He answered, Good news, they were all well, and had catched ten Indians, and that they guarded them all night to one of the flankers of the old English garrison; that their prisoners were part of Annawon's company, and that they had left their families in a swamp above Mattapoiset Neck.* And as they were marching towards the old garrison, Light-foot gave Captain Church a particular account of their exploit, viz. that presently after they left him, they heard another gun, which seemed towards the Indian burying place, and moving that way, they discovered two of the enemy fleeing on a horse. The

* On the west-side of Bristol

* In Swanzey. There is another Mattapoiset in Rochester.

scout clapping into the brush, Nathaniel bid them sit down, and he would presently call all the Indians thereabout unto him. They hid, and he went a little distance back from them, and set up his note, and howled like a wolf. One of the two immediately left his horse and came running to see who was there; but Nathaniel howling lower and lower drew him in between those that lay in wait for him, who seized him; Nathaniel continuing the same note, the other left the horse also, following his mate, and met with the same. When they caught these two they examined them apart, and found them to agree in their story, that there were eight more of them come down into the neck to get provisions, and had agreed to meet at the burying place that evening. These two being some of Nathaniel's old acquaintance, he had great influence upon them, and with his enticing story, (telling what a brave captain he had, how bravely he lived since he had been with him, and how much they might better their condition by turning to him, &c.) persuaded and engaged them to be on his side, which indeed now began to be the better side of the hedge. They waited but a little while before they espied the rest of theirs coming up to the burying place, and Nathaniel soon howled them in as he had done their mates before.

When Captain Church came to the garrison he met his lieutenant and the rest of his company; and then making uq good fires they fell to roasting their horse-beef, enough to last them the whole day, but had not a morsel of bread; though salt they had, which they always carried in their pockets, which, at this time was very acceptable to them. Their next motion was towards the place where the prisoners told them they had left their women and children, and surprised them all, and some others that were newly come to them. And upon examination they held to one story, that it was hard to tell where to find Annawon, for he never roosted twice in a place. Now a certain Indian soldier that Captain Church had gained over to be on his side, prayed that he might have liberty to go and fetch in his father, who, he said, was about four miles from that place, in a swamp, with no other than a young squaw. Captain Church inclined to go with him, thinking it might be in his way to gain some intelligence of Annawon; and so taking one Englishman and a few Indians with him, leaving the rest there, he went with his new soldier to look for his father. When he came to the swamp he bid the Indian go to see if he could find his father; he was no sooner gone but Captain Church discovered a track coming down out of the woods, upon which he and his little company lay close, some on one side of the track, and some on the other. They heard the Indian soldier make a howling for his father; and at length somebody answered him, but while they were listening, they thought they heard somebody coming towards them, presently saw an old man coming up with a gun on his shoulder, and a young woman following, in the track which they lay by. They let them come up between them, and then started up and laid hold of them both. Captain Church immediately examined them apart, telling them, what they must trust to if they told false stories. He asked the young woman, what company they came from last? She said, from Captain Annawon's. He asked her, how many were in company with him when she left him? She said fifty or sixty. He asked her, how many miles it was to the place where she left him? She said, she did not understand miles, but he was up in Squannaconk swamp.* The old man who had been one of Philip's council, upon examination, gave exactly the same account. Captain Church asked him, if they could get there that night? He said, if they went presently, and travelled stoutly, they might get there by sunset. He asked, whither he was going? He answered, that Annawon had sent him down to look for some Indians, that were gone down into Mount-Hope neck to kill some provisions. Captain Church let him know that those Indians were all his prisoners. By this time came the Indian soldier and brought his father and one Indian more. The captain was now in great strait of mind what to do next, he had a mind to give Annawon a visit, now he knew where to find him; but his company was very small, but half a dozen men beside himself, and was under a necessity to send somebody back and acquaint his lieutenant and company with his proceedings. However, he asked his small company that were with him, whether they would willingly go with him, and give Annawon a visit? They told him, they were always ready to obey his commands, &c., but withal told him, that they knew this Captain Annawon was a great soldier; that he had been a valiant captain under Asuhmequin, Philip's father, and that he had been Philip's chieftain all this war; a very subtle man, and of great resolution, and had often said, that he would never be taken alive by the English; and moreover they knew that the men that were with him were resolute fellows, some of Philip's chief soldiers; and therefore feared whether it was practicable to make an attempt upon him with so small a handful of assistants as were now with him: told him further, that it would be a pity that after all the great things he had done, he should throw away his life at last. Upon which he replied, that he doubted not Annawon was a subtle and valiant man: that he had a long time but in vain sought for him, and never till now could find his quarters; and he was very loath to miss of the opportunity; and doubted not but if they would cheerfully go with him, the same Almighty Providence that had hitherto protected and befriended them would do so still, &c. Upon this with with one consent they said, they would go. Captain Church then turned to one Cook, of Plymouth, (the only Englishman then with him) and asked him, what he thought of it? Who replied, Sir, I am never afraid of going any where when you are with me. Then Captain Church asked the old Indian, if he could carry his horse with him? (For he conveyed a horse thus far with him.) He replied, that it was impossible for a horse to pass the swamps: therefore he sent away his new Indian soldier with his father and the captain's horse to his lieutenant, and orders for him to move to Taunton with the prisoners to secure them there, and to come out in the morning in the Rehoboth road, in which he might expect to meet him, if he were alive and had success.

The captain then asked the old fellow, if he would pilot him unto Annawon? He answered, that he having given him his life, he was obliged to serve him. He bid him move on then, and they followed. The old man would out-travel them so far sometimes that they were almost out of sight; looking over his shoulder, and seeing them behind, he would halt. Just as the sun was setting, the old man made a full stop and sat down, the company coming up also sat down, being all weary. Captain Church asked, what news? He answered, that about that time in the evening Captain Annawon sent out his scouts to see if the coast was clear, and as soon as it began to grow dark the scouts returned And then (said he) we may move again securely. When it began to grow dark the old man stood up again, Captain Church asked him, if he would take a gun and fight for him? He bowed very low and prayed him not to impose such a thing upon him, as to fight against Captain Annawon his old friend But says he, I will go along with you and be helpful to you, and will lay hands on any man that shall offer to hurt you. It being now pretty dark they moved close together; anon they heard a noise; the captain stayed the old man with his hand, and asked his own men what noise they thought it might be? They concluded it to be the pounding of a mortar. The old man had given Captain Church a description of the place where Annawon now lay, and of the difficulty of getting at him. Being sensible that they were pretty near them, with two of his Indians he creeps to the edge of the rocks, from whence he could see their camps. He saw three companies of Indians at a little distance from each other, being easy to be discovered by the light of their fires. He saw also the great Annawon and his company, who had formed his camp or kennelling-place, by falling a tree under the side of the great clefts of rocks, and setting a row of birch bushes up against it, where he himself, his son, and some of his chiefs had taken up their lodging and made great fires without them, and had their pots and kettles boiling, and spits roasting; their arms also he discovered, all set together in a place fitted for the purpose, standing up an end against a stick lodged in two crotches, and a mat placed over them, to keep them from the wet or dew. The old Annawon's feet and his son's head, were so near the arms as almost to touch them; but the rocks were so steep that it was impossible to get down, but as they lowered themselves by the boughs and the bushes that grew in the cracks of the rocks. Captain Church creeping back again to the old man, asked him if there was no possibility of getting at them some other way? He answered, no: that he and all that belonged to Annawon were ordered to come that way, and none could come any other way without difficulty or danger of being shot.

Captain Church then ordered the old man and his daughter to go down foremost with their baskets at their backs, that when Annawon saw them with their baskets he should

* Southeasterly part of Rehoboth

not mistrust the intrigue. Captain Church and his handful of soldiers crept down also under the shadow of these two and their baskets, and the captain himself crept close behind the old man, with his hatchet in his hand, and stepped over the young man's head to the arms; the young Annawon discovering of him, whipped his blanket over his head and shrunk up in a heap. The old Captain Annawon started up on his breech, and cried out Howoh, and despairing of escape, threw himself back again, and lay silent until Captain Church had secured all the arms, &c. And having secured that company, he sent his Indian soldiers to the other fires and companies, giving them instructions, what to do and say. Accordingly, they went into the midst of them. When they discovered themselves who they were, told them that their Captain Annawon was taken, and it would be best for them quietly and peaceably to surrender themselves, which would procure good quarter for them: otherwise, if they should pretend to resist or make their escape, it would be in vain, and they could expect no other but that Captain Church with his great army, who had now entrapped them, would cut them to pieces; told them also if they would submit themselves, and deliver all their arms unto them, and keep every man his place until it was day, they would assure them that Captain Church, who had been so kind to themselves when they surrendered to him, should be as kind unto them. Now they being old acquaintance, and many of them relations, did much the readier give heed to what they said, complied and surrendered up their arms unto them, both their guns and hatchets, &c., and were forthwith carried to Captain Church.

Things being so far settled, Captain Church asked Annawon, What he had for supper? For (said he) I am come to sup with you. Taubut (said Annawon) with a big voice; and looking about upon his women, bid them hasten and get Captain Church and his company some supper; then turned to Captain Church and asked him, whether he would eat cow-beef or horse-beef; the captain told him cow-beef would be most acceptable. It was soon got ready, and pulling his little bag of salt out of his pocket, which was all the provision he brought with him; this seasoned his cow-beef so that with it and the dried green corn, which the old squaw was pounding in the mortar, while they were sliding down the rocks, he made a very hearty supper. And this pounding in the mortar proved lucky for Captain Church's getting down the rocks; for when the old squaw pounded, they moved, and when she ceased to turn the corn, they ceased creeping, the noise of the mortar prevented the enemy's hearing their creeping. And the corn being now dressed supplied the want of bread, and gave a fine relish with the cow-beef. Supper being over, Captain Church sent two of his men to inform the other companies, that he had killed Philip, and had taken their friends in Mount-Hope neck, but had spared their lives, and that he had subdued now all the enemy (he supposed) excepting this company of Annawon's, and now if they would be orderly and keep their places until morning, they should have good quarter, and that he would carry them to Taunton, where they might see their friends again, &c.

The messenger returned, that the Indians yielded to his proposals. Captain Church thought it was now time for him to take a nap, having had no sleep in two days and one night before; told his men that if they would let him sleep two hours, they should sleep all the rest of the night. He laid himself down and endeavoured to sleep, but all disposition to sleep departed from him. After he had lain a little while he looked up to see how his watch managed, but found them all fast asleep. Now Captain Church had told Captain Annawon's company, as he had ordered his Indians to tell the others, that their lives should all be spared, excepting Captain Annawon's, and it was not in his power to promise him his life, but he must carry him to his masters at Plymouth, and he would entreat them for his life. Now when Captain Church found not only his own men, but all the Indians fast asleep, Annawon only excepted, whom he perceived was as broad awake as himself; and so they lay looking one upon the other perhaps an hour. Captain Church said nothing to him, for he could not speak Indian, and thought Annawon could not speak English; at length Annawon raised himself up, cast off his blanket, and with no more clothes than his small breeches, walked a little way back from the company; Captain Church thought no other but that he was tired with lying still so long, and wished to walk a little to stretch his limbs but by and by he was gone out of sight and hearing, and then Captain Church began to suspect some ill design in him, and got all the guns close to him, and crowded himself close under young Annawon, that if he should any where get a gun he should not make a shot at him without endangering his son; lying very still a while, waiting the event; at length, heard somebody coming the same way that Annawon went. The moon now shining bright, he saw him at a distance coming with something in his hands, and coming up to Captain Church, he fell upon his knees before him, and offered him what he had brought, and speaking in plain English, said, Great captain, you have killed Philip, and conquered his country; for I believe that I and my company are the last that war against the English, so suppose the war is ended by your means; and therefore these things belong unto you. Then opening his pack, he pulled out Philip's belt curiously wrought with wampum, being nine inches broad, wrought with black and white wampum, in various figures and flowers, and pictures of many birds and beasts. This, when hung upon Captain Church's shoulders, reached his ancles; and another belt of wampum he presented him with, wrought after the former manner, which Philip was wont to put upon his head; it had two flags on the back part, which hung down on his back, and another small belt with a star upon the end of it, which he used to hang on his breast; and they were all edged with red hair, which Annawon said they got in the Mohog's country. Then he pulled out two horns of glazed powder, and a red cloth blanket. He told Captain Church these were Philip's royalties, which he was wont to adorn himself with when he sat in state. That he thought himself happy that he had an opportunity to persent them to Captain Church, who had won them, &c., spent the remainder of the night in discourse; and gave an account of what mighty success he had formerly in wars against many nations of Indians, when he served Asuhmequin, Philip's father, &c. In the morning, as soon as it was light, the captain marched with his prisoners out of that swampy country, towards Taunton, met his lieutenant and company about four miles out of town, who expressed a great deal of joy to see him again, and said, it was more than ever he expected. They went into Taunton, were civilly and kindly treated by the inhabitants, refreshed and rested themselves that night. Early next morning, the captain took old Annawon, and half a dozen of his Indian soldiers, and his own man, and went to Rhode Island, sending the rest of his company and his prisoners by his lieutenant to Plymouth. Tarrying two or three days upon the island, he then went to Plymouth, and carried his wife and his two children with him.

Captain Church had been but a little while at Plymouth, when he was informed of a parcel of Indians who had haunted the woods between Plymouth and Sippican, that did great damage to the English, in killing their cattle, horses, and swine; the captain was soon in pursuit of them: went out from Plymouth the next Monday in the afternoon; next morning early they discovered a track; the captain sent two Indians on the track to see what they could discover, whilst he and his company followed gently after, but the two Indians soon returned with tidings that they discovered the enemy sitting round their fires, in a thick place of brush. When they came pretty near the place, the captain ordered every man to creep as he did and surround them by creeping as near as they could, till they should be discovered, and then to run on upon them and take them alive, if possible, (for their prisoners were their pay:) they did so, took every one that was at the fires, not one escaping. Upon examination they agreed in their story, that they belonged to Tispaquin, who was gone with John Bump, and one more, to Agawom* and Sippican,‡ to kill horses, and were not expected back in two or three days.

This same Tispaquin had been a great captain, and the Indians reported that he was such a great Pauwau, that no bullet could enter him, &c. Captain Church said, he would not have him killed, for there was a war broke out in the eastern part of the country, and he would have him saved to go with him to fight the eastern Indians. Agreeably he left two old squaws of the prisoners, and bid them tarry there until their Captain Tispaquin returned, and to tell him, that Church had been there, and had taken his wife and children, and company, and carried them down to Plymouth; and would spare all their lives and his too, if he would come down to them, and bring the other two that were with him, and they should be his soldiers, &c., Captain Church then returned to

* Wareham. ‡ Rochester.

Plymouth, leaving the old squaws well provided for, and biscuit for Tispaquin when he returned: Telling his soldiers that he doubted not but he had laid a trap that would take him. Captain Church, two days after, went to Boston, (the commissioners then sitting) and waited upon the honourable Governor Leverett, who then lay sick; who requested Captain Church to give him some account of the war; who readily obliged his honour therein, to his great satisfaction, as he was pleased to express himself; taking him by the hand, and telling him, if it pleased God he lived, he would make it a brace of a hundred pounds advantage to him out of the Massachusetts colony, and would endeavour that the rest of the colonies should do proportionably; but he died within a fortnight after, and so nothing was done of that nature. The same day Tispaquin came in, and those that were with him; but when Captain Church returned from Boston, he found to his grief, the heads of Annowan, Tispaquin, &c. cut off, which was the last of Philip's friends. The general court of Plymouth, then sitting, sent for Captain Church, who waited upon them accordingly, and received their thanks for his good service, which they unanimously voted, which were all that Captain Church had for his aforesaid service.

Afterwards, in the year 1676, in the month of January, Captain Church received a commission from Governor Winslow, to scour the woods of some of the lurking enemy, which they were well informed were there. Which commission is as follows:—

Being well informed that there are certain parties of our Indian enemies (remains of the people or allies of Philip, late Sachem of Mount Hope, our mortal enemy) that are still lurking in the woods, near some of our plantations, that go on to disturb the peace of his majesty's subjects in this and the neighbouring colonies, by their frequent robberies, and other insolences: Captain Benjamin Church is therefore hereby nominated, ordered, commissioned, and empowered to raise a company of volunteers, consisting of English and Indians, so many as he shall judge necessary to improve in the present expedition, and can obtain: And of them to take the command and conduct, and to lead them forth unto such place or places, within this or the neighbouring colonies, as he shall think fit, and as the providence of God, and his intelligence, may lead him; to discover, pursue, fight, surprise, destroy, and subdue our said Indian enemy, or any party or parties of them, that, by the providence of God, they may meet with: Or them, or any of them, to receive to mercy, if he see cause; (provided they be not murderous rogues, or such as have been principal actors in those villanies.) And for the prosecution of this design, liberty is hereby granted to the said Captain Church, and others, to arm and set out such of our friendly Indians as he is willing to entertain.—And forasmuch as all these our enemies that have been taken, or at any time may be taken by our forces, have, by our courts and councils, been rendered lawful captives of war, and condemned to perpetual servitude; this council do also determine, and hereby declare, That all such prisoners as, by the blessing of God, the said captain and company, or any of them, shall take, together with their arms and other plunder, shall be their own, and to be distributed amongst themselves, according to such agreement as they may be at one with another: And it shall be lawful, and is hereby warrantable, for him and them to make sale of such prisoners as their perpetual slaves; or otherwise to retain and keep them as they think meet, (they being such as the law allows to be kept.) Finally, the said Captain Church herein improving his best judgment and discretion, and utmost ability, faithfully to serve the interest of God, his majesty's interest, and the interest of the colony; and carefully governing his said company at home and abroad: These shall be unto him full and ample commission, warrant, and discharge. Given under the public seal, January 15th, 1676.

Per JOSIAH WINSLOW, Gov.

Accordingly, Captain Church, accompanied with several gentlemen and others, went out, and took divers parties of Indians; and in one of which parties there was a certain old man whom Captain Church seemed to take particular notice of, and asking him where he belonged, he told him to Swanzey; the captain asked his name, who replied his name was Conscience; Conscience, said the captain, smiling, then the war is over, for that was what they were searching for, it being much wanted; and then returned the said Conscience to his post again at Swanzey, to a certain person the said Indian desired to be sold to, and so returned home.

A FURTHER ACCOUNT OF THE ACTIONS IN THE MORE LATE WARS AGAINST THE COMMON ENEMY AND INDIAN REBELS, IN THE EASTERN PARTS, UNDER THE COMMAND OF THE AFORESAID CAPTAIN BENJAMIN CHURCH.

In the time of Sir Edmund Andross's government, began that bloody war in the eastern parts of New England; so that immediately Sir Edmund sent an express for Captain Church; who, then being at Little-Compton, received it on a Lord's day, in the afternoon meeting; going home after meeting, took his horse and set out for Boston, as ordered; and by sunrise next morning got to Braintree, where he met with Colonel Page on horseback, going to Weymouth and Hingham to raise forces to go east; who said he was glad to see him, and that his excellency would be as glad to see him in Boston so early: So parting he soon got to Boston, and waited upon his excellency; who informed him of an unhappy war broke out in the eastern parts; and said he was going himself in person, and that he wanted his company with him: But Captain Church not finding himself in the same spirit he used to have, said he hoped his excellency would give him time to consider of it. He told him he might; and also said that he must come and dine with him. Captain Church having many acquaintance in Boston, who made it their business some to encourage and others to discourage him from going with his excellency: So after dinner his excellency took him into his room and discoursed freely; saying, that he having knowledge of his former actions and successes; and that he must go with him, and be his second, with other encouragements. But in short, the said Captain Church did not accept, so was dismissed and went home.

Soon after this was the revolution, and the other government reassumed; and then Governor Bradstreet sent for Captain Church to come to Boston as soon as his business would permit; whereupon he went to Boston, and waited upon his honour; who told him he was requested by the council to send for him, to see if he could be prevailed with to raise volunteers, both English and Indians, to go east; for the eastward Indians had done great spoil upon the English in those parts; giving him an account of the miseries and sufferings of the people there. Captain Church's spirits being affected, said if he could do any service for his honour, the country and their relief he was ready and willing. He was asked how he would act? He said, he would take with him as many of his old soldiers as he could get, both English and Indians. The gentlemen of Boston requested him to go to Rhode Island government to ask their assistance: So giving him their letter and about forty shillings in money, he took leave, and went home to Bristol on a Saturday, and the next Monday morning he went over to Rhode Island, and waited upon their governor, delivering the letter as ordered; prayed his honour for a speedy answer: Who said they could not give an answer presently; so he waited on them till he had their answer; and when he had obtained it, he carried it to the Boston gentlemen; who desired him to raise what volunteers he could in Plymouth colony, and Rhode Island government, and what was wanting they would make up out of theirs that was already out in the eastern parts. The summer being far spent, Captain Church made what despatch he could, and raised about two hundred and fifty men, volunteers, and received his commission from Governor Hinckley, which is as followeth, viz:—

"*The Council of war of their Majestys' colony of New Plymouth, in New England, to Major Benjamin Church, Commander-in-Chief.*

"Whereas the Kennebeck and eastern Indians, with their confederates, have openly made war upon their majestys' subjects of the provinces of Maine, New Hampshire, and the Massachusetts colony, having committed many barbarous murders, spoils and rapines upon their persons and estates: And whereas there are some forces of soldiers, English and Indians, now raised and detached out of the several regiments and places within this colony of New Plymouth, to go forth to the assistance of our neighbours and friends of the aforesaid provinces and colony of the Massachusetts, subjects of one and the same crown, and to join with their forces for the repelling and destruction of the common enemy: And whereas you, Benjamin Church, are appointed to be major and commander-in-chief of all the forces, English and Indians, de-

tached within this colony, for the service of their majesties aforesaid: these are in their majesties name to authorize and require you to take into your care and conduct all the said forces, English and Indians, and diligently to attend that service, by leading and exercising of your inferior officers and soldiers, commanding them to obey you as their chief commander; and to pursue, fight, take, kill, or destroy the said enemies, their aiders and abettors, by all the ways and means you can, as you shall have opportunity. And you are to observe and obey all such orders and instructions as from time to time you shall receive from the commissioners of the colonies, the council of war of this colony, or the governor and council of the Massachusetts' colony. In testimony whereof the public seal of the said colony of New Plymouth is hereunto affixed. Dated in Plymouth, the sixth day of September, *Anno Dom.* 1689. *Annoque regni Regis et Reginæ* Willielmi *et* Mariæ *Angliæ*, &c. *Primo.*

THOMAS HINKLEY, *Pres't.*

And now marching them all down to Boston, then received his further orders and instructions, which are as followeth:

Boston, Sept. 16*th*, 1689.

'*To all sheriffs, marshals, constables, and other officers military and civil, in their majesties province of Maine.*

"Whereas, pursuant to an agreement of the commissioners of the united colonies, Major Benjamin Church is commissioned commander in chief over that part of their Majesties forces (levied for the present expedition against the common enemy) whose head-quarters are appointed to be at Falmouth, in Casco Bay: In their Majesties names, you, and every one of you are required to be aiding and assisting to the said Major Church in his pursuit of the enemy, as any emergency shall require; and so impress boats, or other vessels, carts, carriages, horses, oxen, provision, and ammunition, and men for guides, &c., as you shall receive warrants from the said chief commander, or his lieutenant so to do: you may not fail to do the same speedily and effectually, as you will answer your neglect and contempt of their Majesties authority and service at your uttermost peril. Given under my hand and seal the day and year above written. *Annoque Regni Regis* et *Reginæ* Willielmi and Mariæ, *Primo.*

By Thomas Danforth, *President of the province of Maine.*

By the governor and council of the Massachusetts colony: to Major Benjamin Church.

Whereas, you are appointed and commissioned by the council of war, of the colony of New Plymouth, commander in chief of the forces raised within the said colony, against the common Indian enemy, now ordered into the eastern parts, to join with some of the forces of this colony; for the prosecution, repelling, and subduing of the said enemy: It is therefore ordered that Captain Simon Willard, and Captain Nathaniel Hall, with the two companies of soldiers under their several command, belonging to this colony, now in or about Casco Bay, be, and are hereby put under you, as their commander in chief for this present expedition. And in pursuance of the commissions severally given to either of them, they are ordered to observe and obey your orders and directions as their commander in chief until further order from the governor and council, or the commissioners of the colonies. Dated in Boston, the 17th day of September, *Anno Dom.* 1689. *Annoque Regni Regis et Reginæ* Guillielmi *et* Mariæ, *Angliæ &c. Primo.*

S. BRADSTREET, Gov.

Past in Council,
Attest. Isaac Addington, *Secr.*

By the Commissioners of the colonies of the Massachusetts, Plymouth and Connecticut, for managing the present war against the common enemy.

"Instructions for Major Benjamin Church, commander in chief of the Plymouth forces, with others of the Massachusetts, put under his command.

"In pursuance of the commission given you, for their Majesties service in the present expedition against the common Indian enemy, their aiders and abettors; reposing confidence in your wisdom, prudence and fidelity in the trust committed to you, for the honour of God, good of his people, and the security of the interest of Christ in his churches, expecting and praying that in your dependence upon him, you may be helped and assisted with all that grace and wisdom which is requisite for carrying you on with success in this difficult service; and though much is and must be left to your discretion, as Providence and opportunity may present from time to time in places of attendance: yet the following instructions are commended unto your observation, and to be attended to so far as the state of matters with you in such a transaction will admit. You are with all possible speed to take care that the Plymouth forces, both English and Indians, under your command, be fixed and ready, and the first opportunity of wind and weather, to go on board such vessels as are provided to transport you and them to Casco, where, if it shall please God you arrive, you are to take under your care and command the companies of Capt. Nathaniel Hall, and Capt. Simon Willard, who are ordered to attend your command, whom, together with the Plymouth forces, and such as from time to time may be added unto you, you are to improve in such a way as you shall see meet, for the discovering, pursuing, subduing, and destroying the said common enemy, by all opportunities you are capable of; always intending the preserving of any of the near towns from incursions, and destruction of the enemy, yet chiefly improving your men, for the finding and following the said enemy abroad, and if possible to find out and attack their head quarters and principal rendezvous, if you find you are in a rational capacity for so doing. The better to enable you thereto, we have ordered two men-of-war sloops, and other small vessels for transportation to attend you, for some considerable time. You are to see that your soldiers arms be always fixed, and that they be furnished with ammunition, provisions and other necessaries, that so they may be in a readiness to repel and attack the enemy. In your pursuit you are to take special care to avoid danger by ambushments, or being drawn under any disadvantage by the enemy in your marches, keeping out scouts and a forlorn hope before your main body, and by all possible means endeavouring to surprise some of the enemy, that so you may gain intelligence. You are to suppress all mutinies and disorders among your soldiers, as much as in you lies, and to punish such as disobey your officers, according to the rules of war herewith given you.

"You are, according to your opportunity, or any occasion more than ordinary occuring, to hold correspondence with Major Swaine, and to yield mutual assistance when and as you are capable of it, and you may have reason to judge it will be of most public service; and it will be meet you and he should agree of some signal whereby your Indians may be known from the enemy. You are to encourage your soldiers to be industrious, vigorous, and venturous in their service, to search out and destroy the enemy, acquainting them, it is agreed by the several colonies, that they shall have the benefit of the captives, and all lawful plunder, and the reward of *Eight Pounds* per head, for every fighting Indian man slain by them, over and above their stated wages; the same being made appear to the commander in chief, or such as shall be appointed to take care therein. If your commission officers, or any of them should be slain, or otherwise uncapable of service, and for such reason dismissed, you are to appoint others in their room, who shall have the like wages, and a commission sent upon notice given, you to give them commissions in the mean time. You are to take effectual care that the worship of God be kept up in the army, morning and evening prayer attended as far as may be, and as the emergencies of your affairs will admit, to see that the holy sabbath be duly sanctified. You are to take care as much as may be, to prevent or punish drunkenness, swearing, cursing, or such other sins, as do provoke the anger of God. You are to advise with your chief officers in any matters of moment, as you shall have opportunity. You are from time to time to give intelligence and advice to the governor and council of the Massachusetts, or commissioners of the colonies, of your proceedings and occurences that may happen, and how it shall please the Lord to deal with you in this present expedition.

"If you find the vessels are not likely to to be serviceable to you, dismiss them as soon as you may.

"Captain Sylvanus Davis is a prudent man, and well acquainted with the affairs of those parts, and is writ unto to advise and inform you all he can.

"Such further instructions as we shall see reason to send unto you, you are carefully to attend and observe, and in the absence of the commissioners, you shall observe the orders

and instructions directed unto you from the governor and council of the Massachusetts.

Given under our hands in Boston, Sept. 18, 1689.

Thos. Hinkley, *Thomas Danforth*, Pres.
John Walley, *Elisha Cooke*,
Samuel Mason, *William Pitkin.*

THE FIRST EXPEDITION EAST.

Being ready, Major Church embarked with his forces on board the vessels provided to transport them for Casco, having a brave gale at S. W., and on Friday about three o'clock, they got in sight of Casco harbour; and discovering two or three small ships there, not knowing whether they were friends or enemies; whereupon the said commander, Major Church, gave orders that every man that was able should make ready, and all he close, giving orders how they should act in case they were enemies. He going in the Mary sloop, together with the Resolution, went in first, being both well fitted with guns and men; coming to the first, hailed them, who said they were friends, presently manned their boat, brought to, and so came along side of them; who gave the said Church an account, that yesterday there was a very great army of Indians and French with them upon the island, at the going out of the harbour, and that they were come on purpose to take Casco fort and town; likewise informed him that they had got a captive woman aboard (Major Walden's daughter of Piscataqua) that could give him a full account of their number and intentions: He bid them give his service to their captain, and tell him, he would wait upon him after he had been on shore and given some orders and directions. Being come pretty near, he ordered all the men still to keep close, giving an account of the news he had received, and then went ashore, where were several of the chief men of the town who met him, being glad that he came so happily to their relief; told him the news Mrs. Lee had given them, being the woman aforesaid. He, going to Captain Davis's to get some refreshment, having not eat a morsel since he came by Boston castle; and now having inquired into the state of the town, found them in a poor condition to defend themselves against such a number of enemies: He gave them an account of his orders and instructions, and told them what forces he had brought, and that when it was dark they should all land, and not before, lest the enemy should discover them. And then he went on board the privateer, who were Dutchmen; but as he went, called aboard every vessel, and ordered the officers to take care that their men might be all fitted and provided to fight, for the people of the town expected the enemy to fall upon them every minute, but withal charging them to keep undiscovered; and coming on board said privateer was kindly treated, discoursed with Mrs. Lee, who informed him that the company she came with had fourscore canoes, and that there were more of them whom she had not seen, which came from other places, and that they told her when they came all together, they should make up seven hundred men. He asked her whether Casteen was with them? She answered, that there were several Frenchmen with them, but did not know whether Casteen was there or not. He then having got what intelligence she could give him, went ashore and viewed the fort and town, discoursing with the gentlemen there according to his instructions; and when it began to grow dark, he ordered the vessels to come as near the fort as might be, and land the soldiers with as little noise as possible; ordering them as they landed to go into the fort and houses that stood near, that so they might be ready upon occasion; having ordered provisions for them, went to every company and ordering them to get every thing ready; they that had no powder-horns or shot-bags, should immediately make them; ordering the officers to take special care that they were ready to march into the woods an hour before day: And also directing the watch to call him two hours before day; so he hastened to bed to get some rest.

At the time prefixed he was called, and presently ordering the companies to make ready; and about half an hour before day they moved. Several of the towns people went with them into a thick place of brush, about half a mile from the town; now ordering them to send out their scouts, as they used to do, and seeing them all settled at their work, he went into town by sunrise again, and desired the inhabitants to take care of themselves, till his men had fitted themselves with some necessaries: For his Indians most of them wanted both bags and horns; so he ordered them to make bags like wallets, to put powder in one end, and shot in the other. So most of them were ready for action, (viz.) the Seconet Indians, but the Cape Indians were very bare, lying so long at Boston before they embarked, that they had sold everything they could make a penny of; some tying shot and powder in the corners of their blankets. He being in town, just going to breakfast, there was an alarm, so he ordered all the soldiers in town to move away as fast as they could, where the firing was; and he, with what men more were with him of his soldiers, moved immediately, and meeting with Captain Bracket's sons, who told him their father was taken, and that they saw a great army of the Indians in their father's orchard. By this time our Indians that wanted bags and horns were fitted, but wanted more ammunition. Presently came a messenger to him from the town and informed him, that they had knocked out the heads of several casks of bullets, and they were all too big, being musket bullets, and would not fit their guns, and that if he did not go back himself a great part of the army would be kept back from service for want of suitable bullets.

He ran back and ordered every vessel to send ashore all their casks of bullets; being brought, knocked out their heads, and turned them all out upon the green by the fort, and set all the people in the town, that were able, to make slugs; being most of them too large for their use, which had like to have been the overthrow of their whole army: he finding some small bullets, and what slugs were made, and three knapsacks of powder, went immediately to the army, who were very hotly engaged; but coming to the river the tide was up; he called to his men that were engaged, encouraging them, and told them he had brought more ammunition for them. An Indian called Captain Lightfoot, laid down his gun, and came over the river, taking the powder upon his head, and a kettle of bullets in each hand, and got safe to his fellow soldiers. He perceiving great firing upon that side he was of, went to see who they were, and found them to be two of Major Church's companies, one of English and the other of Indians, being in all about fourscore men, that had not got over the river, but lay firing over our men's heads at the enemy; he presently ordered them to rally, and come all together; and gave the word for a Casco man; so one Swarton, a Jerseyman, appearing, who he could hardly understand; he asked him how far it was to the head of the river, or whether there was any place to get over? he said there was a bridge about three quarters of a mile up, where they might get over: So he, calling to his soldiers engaged on the other side, told them that he would soon be with them over the bridge, and come upon the backs of the enemy; which put new courage into them; so they immediately moved up towards the bridge, marching very thin, being willing to make what show they could, shouting as they marched: they saw the enemy running from the river-side, where they had made stands with wood to prevent anybody from coming over the river; and coming to the bridge, they saw on the other side that the enemy had laid logs and stuck birch brush along to hide themselves from our view.

He ordered the company to come altogether, bidding them all to run after him, who would go first, and that as soon as they got over the bridge to scatter, that so they might not be all shot down together, expecting the enemy to be at their stands; so running up to the stands, found none there, for they were just gone, the ground being such they tumbled with them behind the said stands. He ordered the Captain with his company of English to march down to our men engaged, and that they should keep along upon the edge of the marsh, and himself with his Indian soldiers would march down through the brush: and coming to a parcel of low ground, which had been formerly burnt, the old brush being fallen down lay very thick, and the young brush being grown up made it bad travelling; but coming near the back of the enemy, one of his men called unto him their commander and said, that the enemy ran westward to get between us and the bridge, and he, looking that way, saw men running, and making a small stop, heard no firing, but a great chopping with hatchets; so concluding that the fight was over, made the best of their way to the bridge again, lest the enemy should get over the bridge into the town, the men being most of them out (our ammunition lay exposed) coming to the bridge where he left six Indians for an ambuscade on the other side of the river, that if any enemy offered to come over, they should fire at them, which would give him notice, so would come to their assistance; (but in the way having heard no firing nor shouting, concluded the enemy were drawn off) he asked the ambuscade, whether they saw any In-

dians? They said yes, abundance. He asked them where? They answered, that they ran over the head of the river by the cedar swamp, and were running into the neck towards the town.

There being but one Englishman with him, he bid his Indian soldiers scatter, run very thin to preserve themselves, and be the better able to make a discovery of the enemy; and soon coming to Lieutenant Clark's field, on the south side of the neck, and seeing the cattle feeding quietly, and perceiving no track, concluded the ambuscade had told them a falsehood; they hastily returned back to the said bridge, perceiving there was no noise of the enemy. He hearing several great guns fire at the town, concluded that they were either assaulted, or that they had discovered the enemy: he having ordered that in case such should be, that they should fire some of their great guns to give him notice; he being a stranger to the country, concluded the enemy had by some other way got to the town; whereupon he sent his men to the town, and himself going to the river, near where the fight had been, asked them how they did, and what was become of the enemy? Who informed him that the enemy drew off in less than an hour after he left them, and had not fired a gun at them since. He told them he had been within little more than a gun shot of the back of the enemy, and had been upon them had it not been for thick brushy ground, &c. Now some of his men returning from the town gave him the account, that they went while they saw the colours standing and men walking about as not molested. He presently ordered that all his army should pursue the enemy; but they told him that most of them had spent their ammunition, and that if the enemy had engaged them a little longer they might have come and knocked them on the head; and that some of their bullets were so unsizeable that some of them were forced to make slugs while they were engaged. He then ordered them to get over all the wounded and dead men, and to leave none behind; which was done by some canoes they had got. Captain Hall and his men being first engaged, did great service, and suffered the greatest loss in his men; but Captain Southworth with his company, and Captain Numposh with the Seconet Indians, and the most of the men belonging to the town, all coming suddenly to his relief, prevented him and his whole company from being cut off.

By this time the day was far spent, and marching into town about sunset, carying in all their wounded and dead men, being all sensible of God's goodness to them, in giving them the victory, and causing the enemy to fly with shame, who never gave one shout at their drawing off. The poor inhabitants wonderfully rejoiced that the Almighty had favoured them so much; saying, that if Major Church, with his forces, had not come at that juncture, they had been all cut off; and said further, that it was the first time that ever the eastward Indians had been put to flight, and the said Church with his volunteers were wonderfully preserved, having never a man killed outright, and but one Indian mortally wounded, who died, several more being badly wounded, but recovered.

After this engagement Major Church, with his forces, ranging all the country thereabout, in pursuit of the enemy; and visiting all the garrisons at Black Point, Spurwink, and Blue Point, and went up Kennebeck river, but to little effect. And now winter drawing near, he received orders from the government of the Massachusetts Bay, to settle all the garrisons, and put in suitable officers according to his best discretion, and to send home all his soldiers, volunteers and transports; which orders he presently obeyed. Being obliged to buy him a horse to go home by land, that so he might the better comply with his orders. The poor people, the inhabitants of Casco, and places adjacent, when they saw he was going away from them, lamented sadly, and begged earnestly that he would suffer them to come away in the transports; saying, that if he left them there, that in the spring of the year the enemy would come and destroy them and their families. So by their earnest request the said Major Church promised them, that if the governments that had now sent him, would send him the next spring, he would certainly come with his volunteers and Indians to their relief: and that as soon as he had been home, and taken a little care of his own business, he would certainly wait upon the gentlemen of Boston, and inform them of the promise he had made to them; and if they did not see cause to send them relief, to entreat their honors seasonably to draw them off, that they might not be a prey to the barbarous enemy.

Taking his leave of those poor inhabitants, some of the chief men there waited upon him to Black Point, to Captain Scottaway's garrison; coming there, they prevailed with the said Captain Scottaway to go with him to Boston, which he readily complied with, provided the said Church would put another in to command the garrison; which being done, and taking their leave one of another, they set out and travelled through all the country, home to Boston; having employed himself to the utmost to fulfil his instructions last received from Boston gentlemen, which cost him about a month's service over and above what he had pay for from the Plymouth gentlemen: and in his travel homeward several gentlemen waited upon the said Major Church, who was obliged to bear their expences. When he came to Boston gentlemen, he informed them of the miseries those poor people were in by having their provisions taken from them by order of the President—then went home; stayed not long there before he returned to Boston, where Captain Scottaway waited for his coming, that he might have the determination of the government of Boston to carry home with him; and it being the time of the small-pox there, and Major Church not having had it, taking up his lodging near the Court-house, took the first opportunity to inform those gentlemen of the Court his business; who said they were very busy in sending home Sir Edmund, the ship being ready to sail. The said Major Church still waiting upon them, and at every opportunity entreating those gentlemen in behalf of the poor people of Casco, informing the necessity of taking care of them, either by sending them relief early in the spring, or suffering them to draw off, otherwise they would certainly be destroyed. Their answer was, they could do nothing till Sir Edmund was gone. Waiting there three weeks upon great expenses, he concluded to draw up some of the circumstances of Casco, and places adjacent, and to leave it upon the Council Board, before the Governor and Council; having got it done, obtained liberty to go up where the Governor and Council were sitting, he informed their honors, that he had waited till his patience was worn out, so had drawn up the matter to leave upon the Board before them, which is as follows:

To the honored Governor and Council of the Massachusetts.

Gentlemen,

Whereas, by virtue of yours, with Plymouth's desires and commands, I went eastward in the late expedition against the common Indian enemy, where Providence so ordered that we attacked their greatest body of forces, coming then for the destruction of Falmouth, which we know marched off, repulsed with considerable damage, leaving the ground, and never since seen there, or in any place adjacent: the time of the year being then too late to prosecute any further design, and other accidents falling contrary to my expectation, impeding the desired success. Upon my then removal from the province of Maine, the inhabitants were very solicitous that this enemy might be further prosecuted; willing to venture their lives and fortunes in the said enterprise, wherein they might serve God, their king and country, and enjoy quiet and peaceable habitations; upon which I promised to signify the same to yourselves, and willing to venture that little which Providence hath entrusted me with, on the said account. The season of the year being such, if some speedy action be not performed in attacking them, they will certainly be upon us in our out towns, God knows where, and the inhabitants there not being able to defend themselves, without doubt many souls may be cut off, as our last year's experience wofully hath declared. The inhabitants there trust to your protection, having undertaken government and your propriety; if nothing be performed on the said account, the best way (under correction) is to demolish the garrison, and draw off the inhabitants, that they may not be left to a merciless enemy; and that the arms and ammunition may not be there for the strengthening of the enemy; who without doubt have need enough, having exhausted their greatest store in this winter season. I have performed my promise to them, and acquitted myself in specifying the same to yourselves: not that I desire to be in any action, although willing to serve my king and country, and may pass under the censure of scandalous tongues in the last expedition, which I hope they will amend on the first opportunity of service. I leave to mature consideration, the loss of trade and fishery; the war brought to the doors; what a triumph it will be to the enemy, derision to our neighbors, besides dishonor to God and our nation, and grounds of frowns from our prince, the frustration of those whose eyes are upon you for help, who might have

otherwise applied themselves to their king. Gentlemen, this I thought humbly to propose unto you, that I might discharge myself in my trust from yourselves, and promise to the inhabitants of the province, but especially my duty to God, her majesty, and my nation, praying for your honors' prosperity, subscribe, Your servant,

BENJ. CHURCH.

A true copy given in at Boston, this 6th of February, 1689, at the Council Board.
Attest. T. S.

Major Church said, moreover, that in thus doing he had complied with his promise to those poor people of Casco, and should be quit from the guilt of their blood. The governor was pleased to thank him for his care and pains taken; then taking his leave of them went home, and left Captain Scottaway in a very sorrowful condition, who returned home some time after with only a copy of what was left on the board by the said Church. Major Church not hearing any thing till May following, and then was informed, that those poor people of Casco were cut off by the barbarous enemy; and that although they made their terms with Monsieur Casteen, who was commander of those enemies, yet he suffered those merciless savages to massacre and destroy the most of them. To conclude this first expedition east; I shall just give you a hint how Major Church was treated, although he was commander-in-chief of all the forces out of Plymouth and Boston government, after he came home, for Plymouth gentlemen paid him but forty-two pounds; telling him, he must go to Boston gentlemen for the rest, who were his employers as well as they. Of whom he never had one penny for all travel and expenses in raising volunteers, and services done; except forty shillings or thereabout, for going from Boston to Rhode Island on their business, and back to Boston again; also, for sending a man to Providence for Captain Edmunds, who raised a company in those parts, and went east with them.

THE SECOND EXPEDITION EAST.

In the year 1690, was the expedition to Canada, and Major Walley often requested Major Church, that if he would not go himself in that expedition, that he would not hinder others: he answered the said Walley, that he should hinder none but his old soldiers, that used to go along with him. And the said Church going down to Charlestown, to take his leave of some of his relations and friends, who were going into that expedition, promised his wife and family not to go into Boston, the small-pox being very rife there. Coming to Charlestown, several of his friends in Boston came over to see him; and the next day after the said Church came there, Major Walley came to him, and informed him, that the governor and council wanted to speak with him: he answered him, that he had promised his wife and family not to go into Boston; saying, if they had any business, they could write to him, and that he would send them his answer. Soon after came over two other gentlemen with a message, that the governor and council wanted to have some discourse with him. The answer returned was, that he intended to lodge that night at the Grayhound, in Roxbury, and that in the morning would come to Pollard's at the south end of Boston; which accordingly he did. Soon after he came thither received a letter from the honorable Captain Sewall, to request him to the council; the answer he returned by the bearer was, that he thought there was no need of his hazarding himself so much as to come and speak with them; not that he was afraid of his life, but because he had no mind to be concerned; and further by reason they would not hearken to him about the poor people of Casco. But immediately came Mr. Maxfield to him, saying, that the council bid him tell the said Church, that if he would take his horse and ride along the middle of the street, there might be no danger, they were then sitting in council: he bid them go and tell his masters, not to trouble themselves, whether he came upon his head or feet, he was coming: however, thinking the return was something rude, called him back to drink a glass of wine, and then he would go with him. So coming to the council, they were very thankful to him, and told him that the occasion of their sending for him was, that there was a captive come in who gave them an account, that the Indians were come down, and had taken possession of the stone fort at Pejepscot, so that they wanted his advice and thoughts about the matter; whether they would tarry and keep in the fort or not; and whether it was not expedient to send some forces to do some spoil upon them; and further to know whether he could not be prevailed with to raise some volunteers and go, to do some spoil upon them? He answered them, he was unwilling to be concerned any more; it being very difficult and chargeable to raise volunteers, as he found by experience in the last expedition. But they using many arguments prevailed so far with him, that if the government of Plymouth saw cause to send him, he would go, thinking the expedition would be short; took his leave of them and went home. And in a short time after, there came an express from Governor Hinkley, to request Major Church to come to Barnstable to him—he having received a letter from the government of Boston to raise some forces to go east: whereupon the said Major Church went the next day to Barnstable, as ordered; finding the governor and some of the council of war there, discoursed him, concluding that he should take his Indian soldiers, and two English captains, with what volunteers could be raised; and that one captain should go out of Plymouth and Barnstable county, and the other out of Bristol county, with what forces he could raise, concluding to have but few officers, to save charge. The said Church was at great charge and expense in raising of forces. Governor Hinkley promised that he would take care to provide vessels to transport the said army with ammunition and provisions, by the time prefixed by himself, for the government of Boston had obliged themselves by their letter, to provide any thing that was wanting; so at the time, Major Church marched down all his soldiers out of Bristol county to Plymouth, as ordered; and being come, found it not as he expected, for there were neither provisions, ammunition, nor transports; so he immediately sent an express to the governor who was at Barnstable, to give him an account that he with the men were come to Plymouth, and found nothing ready; in his return to the said Church, gave him an account of his disappointments; and sent John Lathrop of Barnstable in a vessel with some ammunition and provision on board, to him at Plymouth; also sent him word that there was more on board of Samuel Ailing of Barnstable, who was to go for a transport, and that he himself would be at Plymouth next day; but Alling never came near him, but went to Billingsgate, at Cape Cod, as he was informed The governor being come, said to Major Church that he must take some of the open sloops, and make spar decks to them, and lay platforms for the soldiers to lie upon; which delays were very expensive to the said Church; his soldiers being all volunteers, daily expected to be treated by him, and the Indians always begging for money to get drink; but he, using his utmost diligence, made what dispatch he could to be gone, being ready to embark, received his commission and instructions from Governor Hinkley, which are as followeth, viz.

The Council of War of their Majestics' colony of New-Plymouth, in New-England: To Major Benjamin Church, Commander-in-Chief, &c.

Whereas, the Kennebeck and Eastward Indians, with the French, their confederates have openly made war upon their majesties' subjects of the provinces of Maine, New Hampshire, and of the Massachusetts colony, having committed many barbarous murders, spoils, and rapines upon their persons and estates: and whereas, there are some forces of soldiers, English and Indians, now raised and detached out of the several regiments and places within this colony of New-Plymouth, to go forth to the assistance of our neighbors and friends of the aforesaid provinces and colony of the Massachusetts, subjects of one and the same crown: and whereas you, Benjamin Church, are appointed major and commander-in-chief of all the forces, English and Indians, detached within this colony, together with such other of their majesties' subjects as elsewhere shall enlist themselves, or shall be orderly put under your command for the service of their majesties, as aforesaid. These are in their majesties' name to authorize and require you to take into your care and conduct all the said forces, English and Indians, and diligently to intend that service, by leading and exercising your inferior officers and soldiers, commanding them to obey you as their chief commander: and to pursue, fight, take, kill or destroy the said enemies, their aiders and abettors by all the ways and means you can, as you shall have opportunity, and to accept to mercy, or grant quarter and favor to such or so many of said enemies as you shall find needful for promoting the design aforesaid: and you are to observe and obey all such orders and instructions, as from time to time

you shall receive from the commissioners of the colonies, or the council of war of the said colony of New-Plymouth, or from the governor and council of the Massachusetts. In testimony whereof is affixed the public seal of this colony. Dated in Plymouth, the second day of September, Anno Dom. 1690. Annoque regni Regis et Reginæ Willielmi et Mariæ, &c. Secundo.

THO. HINKLEY, *President.*

Instructions for Major Benjamin Church, Commander-in-Chief of the Plymouth forces, with other of the Massachusetts put under his command.

In pursuance of the commission given you for their Majesties' service, in the present expedition against the common enemy, Indian and French, their aiders and abettors, on the request of our brethren and friends of the Massachusetts colony, subjects of one and the same crown of England; for our assistance of them therein: reposing confidence in your wisdom, prudence, proneness and faithfulness in the trust under God committed to you for the honor of his name, the interest of Christ in these churches, and the good of the whole people; praying and expecting that in your dependence on him, you may be helped and assisted with all that grace, wisdom and courage necessary for the carrying of you on with success in this difficult service; and though much is and must be left to your discretion, with your council of officers, as Providence and opportunity may present from time to time in places of action: yet the following instruetions are commended to you to be observed and attended to by you, so far as the state and circumstances of that affair will admit.

"You are with all possible speed to take care that the Plymouth forces, both English and Indians, under your command, be fixed and ready on the first opportunity of wind and weather, to go on board such vessels, as are provided to transport you to Piscataqua; and there to take under your care and command such companies of the Massachusetts colony, as shall by them be ordered and added to you there, or elsewhere from time to time; all which you are to improve in such way, and from place to place, as with the advice of your council, consisting of the commission officers of the Massachusetts colony, and Plymouth, under your conduct, shall seem meet, for the finding out, pursuing, taking or destroying of said common enemy, on all opportunities, according to commission, and such further orders and instructions as you have or may receive from the Governor and Council of the Massachusetts, the Commissioners for the United colonies, or the Governor and Council of Plymouth; so far as you may be capable, intending what you can the preserving of the near towns from the incursions and destructions of the enemy; but chiefly to intend the finding out, pursuing, taking, and destroying the enemy abroad, and if possible to attack them in their head quarters and principal rendezvous, if you are in a rational capacity of so doing; and for the better enabling you thereunto, we have appointed the vessels that transport you, and the provisions, &c. to attend your motion and order, until you shall see cause to dismiss them, or any one of them, which is desired to be done the first opportunity that the service will admit. You are to see that your soldiers' arms be always fixed, and they provided with ammunition, and other necessaries, that they may be always ready to repel or attack the enemy. You are to take special care to avoid danger in the pursuit of the enemy by keeping out scouts, and a forlorn, to prevent the ambushments of the enemy on your main body in their marches. And by all possible means to surprise some of the enemy, that so you may gain better intelligence.

"You are to take effectual care that the worship of God be kept up in the army, that morning and evening prayer be attended, and the holy sabbath duly sanctified, as the emergency of your affairs will admit.

"You are to take strict care to prevent or punish drunkenness, cursing, swearing, and all other vices, lest the anger of God be thereby provoked to fight against you. You are, from time to time to give intelligence and advice to the Governor of the Massachusetts, and to us, of your proceedings and occurrences that may attend you. And in case of a failure of any commission officers, you are to appoint others in their stead. And when, with the advice of your council aforesaid, you shall after some trial, see your service not like to be advantageous to the accomplishment of the public end aforesaid; that then you return home with the forces; especially if you shall receive any orders or directions so to do from the Massachusetts, or from us. Given under my hand, at Plymouth, the second day of September, Anno Dom. 1690.

THO. HINKLEY, Gov. & President.

Now having a fair wind Major Church soon got to Piscataqua, who was to apply himself to Major Pike, a worthy gentleman, who said he had advice of his coming from Boston gentlemen; also he had received directions that what men the said Church should want must be raised out of Hampshire, out of the several towns and garrisons; Major Pike asked him how many men he should want? He said enough to make up his forces that he brought with him, 300 at least, and not more than 350. And so in about nine days' time he was supplied with two companies of soldiers. He having been at about twenty shillings a day charge in expenses whilst there. Now he received Major Pike's instructions; which are as followeth:

Porstmouth, New Hampshire, Sept. 9, 1690.

To Major Benjamin Church, Commander-in-Chief of their Majesties' forces now designed upon the present expedition eastward, and now resident at Portsmouth.

The Governor and Council of the Massachusetts Colony reposing great trust and confidence in your loyalty and valor, from experience of your former actions, and of God's presence with you in the same; in pursuance of an order received from them, commanding it: these are in their majesties' names to empower and require you, as commander-in-chief, to take into your care and conduct these forces now here present at their rendezvous at Portsmouth; and they are alike required to obey you: and with them to sail eastward by the first opportunity to Casco, or places adjacent, that may be most commodious for landing with safety and secresy; and to visit the French and Indians at their head-quarters at Ameras-cogen, Pejepscot, or any other place, according as you may have hope or intelligence of the residence of the enemy; using always your utmost endeavour for the preservation of your own men, and the killing, destroying, and utterly rooting out of the enemy, wheresoever they may be found; and also as much as may possibly be done for the redeeming or recovering of our captives in any places.

You being there arrived, and understanding your way, to take your journey back again either by land or water, as you shall judge most convenient for the accomplishing of the end intended; and to give intelligence always of your motion whensoever you can with safety and convenience.

Lastly, in all to consult your council, the commanders or commission officers of your several companies, when it may be obtained, the greater part of whom to determine: and so the Lord of Hosts, the God of armies, go along with you, and be your conduct. Given under my hand the day and year abovesaid. Per ROBERT PIKE.

Being ready, they took the first opportunity, and made the best of their way to Pejepscot fort, where they found nothing.—From thence they marched to Ameras-cogen, and when they came near the fort, Major Church made a halt, ordering the captains to draw out of their several companies sixty of their meanest men, to be a guard to the doctor and knapsacks, being not a mile from said fort; and then moving towards the fort, they saw young Doney and his wife, with two English captives. The said Doney made his escape to the fort, his wife was shot down, and so the two poor captives were released out of their bondage. The said Major Church and Captain Walton made no stop, making the best of their way to the fort, with some of the army, in hopes of getting to the fort before young Doney; but the river, through which they must pass, being as deep as their armpits; however, Maj. Church, as soon as he was got over, stripped to his shirt and jacket, leaving his breeches behind, ran directly to the fort, having an eye to see if young Doney, who ran on the other side of the river, should get there before him. The wind now blowing very hard in their faces as they ran, was some help to them; for several of our men fired guns, which they in the fort did not hear, so that we had taken all in the fort had it not been for young Doney, who got to the fort just before we did, who ran into the south gate, and out of the north, all of the men following him, except one, who also ran directly down to the great river and falls. The said Church and his forces, being come pretty near, he ordered the said Walton to run directly, with some forces, into the fort, and himself, with the rest, ran down to the river after the enemy, who ran some of them into the river, and the rest under the great falls; those who ran into the river were killed; for he saw but one man get over, and he only

crept up the bank, and there lay in open sight; and those that ran under the falls they made no discovery of, notwithstanding several of his men went in under the said falls, and were gone some considerable time, could not find them; so, leaving a watch there, returned up to the fort, where he found but one man taken, and several women and children, among whom was Captain Hakins's wife and Worumbos's wife, the Sachem of that fort, with their children; the said Hakins was Sachem of Pennacook, who destroyed Major Walden and his family, some time before. The said two women, viz. Hakins's and Worumbos's wives, requested the said Church that he would spare them and their children's lives, promising, upon that condition, he should have all the captives that were taken, and in the Indians' hands. He asked them how many. They said about fourscore: so upon that condition, he promised them their lives. And in the said fort there were several English captives, who were in a miserable condition; among them was Captain Huckings's wife, of Oyster-river. Major Church proceeded to examine the man taken, who gave him an account that most of the fighting men were gone to Winter-harbor, to provide provisions for the Bay of Fundy Indians, who were to come and join with them to fight the English. The soldiers being very rude, would hardly spare the Indian's life, while in examination, intending when he had done that he should be executed; but Captain Huckings's wife, and another woman went down on their knees and begged for him, saying, "He had been a means to save their lives and a great many more, and had helped several to opportunities to run away and make their escape; and that never, since he came among them, had fought against the English, but being related to Hakins's wife, kept at the fort with them, he having been there two years; but his living was to the westward of Boston." So, upon their request, his life was spared. Next day the said Church ordered that all their corn should be destroyed, being a great quantity, saving a little for the two old Squaws which he designed to leave at the fort, to give an account who he was, and from whence he came; the rest being knocked on the head, except the aforementioned, for an example, ordering them all to be buried. Having inquired where all their best beaver was, they said it was carried away to make a present to the Bay of Fundy Indians, who were coming to their assistance.

Now being ready to draw off from thence, he called the two old Squaws to him, and gave each of them a kettle and some biscuits, bidding them to tell the Indians when they came home, that he was known by the name of Captain Church, and lived in the westerly part of Plymouth government; and that those Indians that came with him were formerly King Philip's men, and that he had met with them in Philip's war, and drew them off from him to fight for the English, against the said Philip and his associates, who then promised him to fight for the English as long as they had one enemy left; and said that they did not question but before Indian corn was ripe to have Philip's head, notwithstanding he had twice as many men as were in their country; and that they had killed and taken one thousand three hundred and odd of Philip's men, women and children, and Philip himself, with several other Sachems, and that they should tell Hakins and Worumbos, that if they had a mind to see their wives and children they should come to Wells' garrison, and that there they might hear of them. Major Church having done, moved with all his forces down to Mequait, where the transports were (but in the way some of his soldiers threatened the Indian man prisoner very much, so that in a thick swamp he gave them the slip and got away), and when they all got on board the transport, the wind being fair, made the best of their way for Winter-harbor, and the next morning before day, and as soon as the day appeared, they discovered some smoke rising towards Skuman's garrison. He immediately sent away a scout of sixty men, and followed presently with the whole body; the scout coming near a river discovered the enemy to be on the other side of the river. But three of the enemy were come over the river, to the same side of the river which the scout was of; ran hastily down to their canoe, one of which lay at each end of the canoe, and the third stood up to paddle over. The scout fired at them, and he that paddled fell down upon the canoe, and broke it to pieces, so that all three perished. The firing put the enemy to the run who left their canoes and provisions to ours; and old Doney, and one Thomas Baker, an Englishman, who was a prisoner amongst them, were up at the falls, and heard the guns fire, expected the other Indians were come to their assistance, so came down the river in a canoe; but when they perceived that there were English as well as Indians, old Doney ran the canoe ashore, and ran over Baker's head, and followed the rest, and then Baker came to ours and gave an account of the beaver hid at Pejepscot plain, and coming to the place where the plunder was, the major sent a scout to Pejepscot fort, to see if they could make any discovery of the enemy's tracks, or could discover any coming up the river; who returned and said they saw nothing but old tracks at the said fort.

Now having got some plunder, one of the captains said it was time to go home, and several others were of the same mind; and the major being much disturbed at the motion of theirs, expecting the enemy would come in a very short time, where they might have a great advantage of them. Notwithstanding all he could say or do, he was obliged to call a council, according to his instructions, wherein he was out-voted. The said commander seeing he was put by of his intentions, proffered if sixty men would stay with him, he would not embark as yet; but all he could say or do could not prevail; then they moved to the vessels and embarked, and as they were going in the vessels, on the back side of Mayr-point, they discovered eight or nine canoes, who turned short about and went up the river; being the same Indians that the major expected, and would have waited for; and the aforesaid captain being much disturbed at what the major had said to him, drew off from the fleet, and in the night ran aground. In the morning Anthony Bracket, having been advised and directed by the Indian that had made his escape from our forces, came down near where the aforesaid vessel lay aground, and got aboard, who has proved a good pilot and captain for his country. The next day being very calm and misty, so that they were all day getting down from Maquait to Perpodack; and the masters of the vessels thinking it not safe putting out in the night, so late in the year, anchored there at Perpodack. The vessels being much crowded, the major ordered that three companies should go on shore, and no more, himself with Captain Converse went with them to order their lodging, and finding just houses convenient for them, viz. two barns and one house; so seeing them all settled and their watches out, the major and Captain Converse returned to go on board, and coming near where the boat was (it was pretty dark) they discovered some men, but did not know what or who they were. The major ordered those that were with him all to clap down and cock their guns, and he called out and asked them who they were. And they said, Indians. He asked them whose men they were? They said, Captain Southworth's.—He asked them where they intended to lodge. They said, in those little huts that the enemy made when they took that garrison. The major told them they must not make any fires, for if they did, the enemy would be down upon them before day. They laughed, and said, our major is afraid. Having given them their directions, he, with Capt. Converse went on board the Mary sloop; designing to write home, and send away in the morning the two sloops which had the small-pox on board. But before day our Indians began to make fires, and to sing and dance; so the major called to Captain Southworth to go ashore and look after his men, for the enemy would be upon them by and by. He ordered the boat to be hauled up to carry him ashore, and called Captain Converse to go with him, and just as the day began to appear, as the major was getting into the boat to go ashore, the enemy fired upon our men; the Indians, notwithstanding that one Philip, an Indian of ours, who was out upon the watch, heard a man cough, and the sticks crack; who gave the rest an account, that he saw Indians; which they would not believe, but said to him, "You are afraid."—His answer was, that they might see them come creeping. They laughed, and said, they were hogs. "Aye," said he, "and they will bite you by and by." So presently they did fire upon our men, but the morning being misty their guns did not go off quick, so that our men had all time to fall down before their guns went off, and saved themselves from that volley, except one man, who was killed.

This sudden firing upon our Indian soldiers surprised them so that they left their arms, but soon recovered them again, and got down the bank which was but low. The major, with all the forces on board, landed as fast as they could, the enemy firing smartly at them; however all got safe ashore.—The enemy had a great advantage of our forces, who were between the sunrising and

the enemy, so that if a man put up his head or hand they could see it, and would fire at it. However some, with the major, got up the bank behind stumps and rocks, to have the advantage of firing at the enemy; but when the sun was risen the major slipped down the bank again, where all the forces were ordered to observe his motion, viz. that he would give three shouts, and then all of them should run with him up the bank. So, when he had given the third shout, ran up the bank, and Captain Converse with him, but when the said Converse perceived that the forces did not follow as commanded, called to the major and told him the forces did not follow; who, notwithstanding the enemy fired smartly at him, got safe down the bank again, and rallying the forces up the bank, soon put the enemy to flight, and following so close, that they took thirteen canoes, and one lusty man, who had Joseph Ramsdel's scalp by his side, who was taken by two of our Indians, and having his deserts was himself scalped.—This being a short and smart fight, some of our men were killed and several wounded. Some time after an Englishman, who was prisoner amongst them, gave an account that our forces had killed and wounded several of the enemy, for they killed several prisoners according to custom.

After this action was over, our forces embarked for Piscataqua, and the major went to Wells, and removed the captain there, and put in Captain Andros, who had been with him and knew the discourse left with the two old squaws at Ameras-cogen, for Hakins and Worumbos to come there in fourteen days, if they had a mind to hear of their wives and children. Who did then, or soon after, come with a flag of truce to said Wells's garrison, and had leave to come in, and more appearing came in, to the number of eight, without any terms, being all chief sachems, and were very pleased to hear of the women and children, viz. Hakins's and Worumbos's wives and children; who all said three several times that they would never fight against the English any more, for the French made fools of them.—They saying as they did, the said Andros let them go. Major Church being come to Piscataqua, and two of his transports having the small-pox on board, and several of the men having got great colds by their hard service, pretended they were going to have the small-pox, thinking by that means to be sent home speedily. The major being willing to try them, went to the gentlemen there, and desired them to provide a house, for some of his men expected they should have the small-pox; who readily did, and told him that the people belonging to it were just recovered of the small-pox, and had been all at meeting. The major, returning to his officers, ordered them to draw out all their men that were going to have the small-pox, for he had provided an hospital for them. So they drew out seventeen men, that had, as they said, all the symptoms of the small-pox.—He ordered them all to follow him, and coming to the house he asked them how they liked it? They said very well. Then he told them that the people in the said house had all had the small-pox, and were recovered; and that if they went in they must not come out till they all had it; whereupon they all presently began to grow better, and to make excuses, except one man who desired to stay out till night before he went in. The major going to the gentlemen told them, that one thing more would work a perfect cure upon his men, which was to let them go home; which did work a cure upon all, except one, and he had not the small-pox. So he ordered the plunder should be divided forthwith, and sent away all the Plymouth forces. But the gentlemen there desired him to stay, and they would be assisting to him in raising new forces, to the number of what was sent away; and that they would send to Boston for provisions, which they did, and sent Captain Plaisted to the Governor and Council at Boston. And in the mean time the major with those gentlemen went into all these parts and raised a sufficient number of men, both officers and soldiers; who all met at the bank on the same day that Captain Plaisted returned from Boston; whose return from the Boston gentlemen was, that the Canada expedition had drained them so that they could do no more: so that Major Church, notwithstanding he had been at considerable expenses in raising said forces to serve his king and country, was obliged to give them a treat and dismiss them. Taking his leave of them came home to Boston, in the Mary, sloop, Mr. Alden master, and Captain Converse with him, on a Saturday; and waiting upon the Governor and some of the gentlemen in Boston, they looked very strange upon them, which not only troubled them, but put them in some consternation what the matter should be, that after so much toil and hard service could not have so much as one pleasant word, nor any money in their pockets; for Major Church had but eight pence left, and Captain Converse none, as he said afterwards. Major Church seeing two gentlemen who he knew had money, asked them to lend him forty shillings, telling them his necessity: yet they refused. So being bare of money was obliged to lodge at Mr. Alden's three nights, and the next Tuesday morning Captain Converse came to him, not knowing each others circumstances as yet, and said he would walk with him out of town; so coming near Pollard's at the south end, they had some discourse; that it was very hard that they should part with dry lips. Major Church told Captain Converse that he had but eight pence left, and could not borrow any money to carry him home. And the said Converse said, that he had not a penny left, so they were obliged to part without going to Pollard's. The said Captain Converse returned back into town, and the said Church went over to Roxbury; and at the tavern he met with Stephen Braton, of Rhode-Island, a drover; who was glad to see him, the said Church, and he as glad to see his neighbour; whereupon Major Church called for an eight-penny tankard of drink, and let the said Braton know his circumstances, asked him whether he would lend him forty shillings? He answered, yes, forty pounds, if he wanted it. So he thanked him, and said he would have but forty shillings, which he freely lent him. And presently after Mr. Church was told that his brother, Caleb Church, of Watertown was coming with a spare horse for him, having heard the night before that his brother was come in; by which means the said Major Church got home. And for all his travel and expenses in raising soldiers, and service done, never had but £14 of Plymouth gentlemen, and not a penny of Boston, notwithstanding he had worn out all his clothes, and run himself in debt, so that he was obliged to sell half a share of land in Tiverton, for about £60, which is now worth £300 more and above what he had.

Having not been at home long, before he found out the reason why Boston gentlemen looked so disaffected on him, as you may see by the sequel of two letters Major Church sent to the gentlemen in the eastward parts; which are as followeth:—

Bristol, November 27, 1690.

Worthy Gentlemen:

According to my promise when with you last, I waited upon the Governor at Boston, upon the Saturday, Captain Converse being with me. The Governor informed us that the Council was to meet on the Monday following in the afternoon, at which time we both there waited upon them, and gave them an account of the state of your country, and great necessities. They informed us, that their General Court was to convene the Wednesday following, at which time they would debate and consider of the matter; myself being bound home, Captain Converse was ordered to wait upon them, and bring you their resolves. I then took notice of the Council that they looked upon me with an ill aspect, not judging me worthy to receive thanks for the service I had done in your parts, nor as much as asked me whether I wanted money to bear my expenses, or a horse to carry me home. But I was forced, for want of money, being far from friends, to go to Roxbury on foot, but meeting there with a Rhode Island gentleman, acquainted him of my wants, who tendered me ten pounds, whereby I was accommodated for my journey home. And being come home, I went to the minister of our town, and gave him an account of the transactions of the great affairs I had been employed in, and of the great favour God was pleased to show me, and my company, and the benefit I hoped would accrue to yourselves, and desired him to return public thanks; but at the same interim of time a paper was presented unto him from a Court of Plymouth, which was holden before I came home, to command a day of humiliation through the whole government, because of the frown of God upon those forces sent under my command, and the ill-success we had, for want of good conduct. All which was caused by those false reports which were posted home by those ill-affected officers that were under my conduct, especially one which yourselves very well know, who had the advantage of being at home a week before me, being sick of action, and wanting the advantage to be at the bank, which he every day was mindful of, more than fighting the enemy in their own country.

After I came home, being informed of a General Court at Plymouth, and not forgetting my faithful promise to you, and the duty

I lay under, I went thither, where, waiting upon them, I gave them an account of my eastward transactions, and made them sensible of the falseness of those reports that were posted to them by ill hands, and found some small favorable acceptance with them, so far that I was credited. I presented your thanks to them for their seasonably sending those forces to relieve you, with that expense and charge they had been at; which thanks they gratefully received, and said a few lines from yourself would have been well accepted. I then gave them an account of your great necessities, by being imprisoned in your garrisons, and the great mischief that would attend the public concerns of this country by the loss of their Majesties' interest, and so much good estate of yours and your neighbours, as doubtless would be on the deserting of your town. I then moved for a free contribution for your relief, which they with great forwardness promoted, and then ordered a day of thanksgiving through the government, upon the 26th day of this instant—upon which day a collection was ordered for your relief (and the places near adjacent) in every respective town in this government; and for the good management of it, that it might be safely conveyed unto your hands, they appointed a man in each county for the receipt and conveyance thereof. The persons nominated and accepted thereof, are: for the county of Plymouth, Captain Nathaniel Thomas of Marshfield; for the county of Barnstable, Captain Joseph Lathrop of Barnstable; and for the county of Bristol, myself. Which, when gathered you will have a particular account from each person, with orders of advice how it may be disposed of for your best advantage, with a copy of the Court's order. The gentlemen the effects are to be sent to, are yourselves that I now write to, viz. John Wheelwright, Esq., Captain John Littlefield, and Lieutenant Joseph Story. I deferred writing, expecting every day to hear from you concerning the Indians coming to treat about their prisoners that we had taken. The discourse I made with them at Ameras-cogen, I knew would have that effect as to bring them to a treaty, which I would have thought myself happy to have been improved in, knowing that it would have made much for your good. But no intelligence coming to me from any gentlemen in your parts, and hearing nothing but by accident, and that in the latter end of the week, by some of ours coming from Boston, informed me that the Indians were come into your town to seek for peace, and that there was to be a treaty speedily, but the time they knew not. I took my horse, and upon the Monday set out for Boston, expecting the treaty had been at your town, as rationally it should; but on Tuesday night coming to Boston, there met with Captain Elisha Andros, who informed me that the place of treaty was Sacaty-hock, and that Captain Alden was gone from Boston four days before I came there, and had carried all the Indian prisoners with him, and that all the forces were drawn out of your parts, except twelve men in your town, and twelve in Piscataqua, which news did so amuse me, to see that wisdom was taken from the wise, and such imprudence in their actions as to be deluded by Indians, and to have a treaty so far from any English town, and to draw off the forces upon what pretence soever, to me looks very ill. My fear is that they will deliver those that we have taken, which, if kept, would have been greatly for your security, in keeping them in awe, and preventing them from doing any hostile action or mischief, I knowing that the English being abroad are very earnest to go home, and the Indians are very tedious in their discourses, and by that means will have an advantage to have their captives at very low rates, to your great damage. Gentlemen, as to Rhode Island, I have not concerned myself as to any relief for you, having nothing in writing to show to them; yet upon discourse with some gentlemen there, they have signified a great forwardness to promote such a thing. I lying under great reflections from some of yours in the eastward parts, that I was a very covetous person and came there to enrich myself, and that I killed their cattle and barrelled them up and sent them to Boston, and sold them for plunder, and made money to put into my own pocket; and the owners of them, being poor people, begged for the hides and tallow with tears in their eyes, and that I was so cruel as to deny them, which makes me judge myself incapable to serve you in that matter. Yet I do assure you, that the people are very charitable at the island, and forward in such good actions, and therefore advise you to desire some good substantial person to take the management of it, and write to the government there, which I know will not be labor lost. As for what I am accused of, you all can witness to the contrary, and I should take it very kindly from you to do me that just right, as to vindicate my reputation; for the wise man says, "A good name is as precious ointment." When I hear of the effects of the treaty, and have an account of this contribution, I intend again to write to you, being very desirous, and should think myself very happy to be favored with a few lines from yourselves, or any gentlemen in the eastward parts. Thus, leaving you to the protection and guidance of the great God of heaven and earth, who is able to protect and supply you in your great difficulties, and to give you deliverance in his own due time.

I remain, gentlemen,
Your most assured friend,
To serve you to my utmost power,
BENJAMIN CHURCH.

Postscript. Esquire Wheelwright, Sir, I entreat you, after the perusal of these lines, to communicate the same to Captain John Littlefield, Lieutenant Joseph Story, and to any other gentleman as in your judgment you see fit,—with the tenders of my respects to you, and to Major Vaughan, and his good lady and family. To Captain Fryer and good Mrs. Fryer, with hearty thanks for their kindness whilst in those parts, and good entertainment from them. My kind respects to Major Frost, Captain Walton, Lieutenant Honeywell, and my very good friend, little Lieutenant Plaisted. With due respects to all gentlemen my friends in the eastward parts, as if particularly named. Farewell.

B. C.

To Major Pike.

Bristol, Nov. 27, 1690.

Honored Sir:

These come to wait upon you, to bring you the tenders of my hearty service to yourself and lady, with due acknowledgement of thankfulness for all the kindness and favor I received from you in the eastward parts, when with you. Since I came from those parts, I am informed by Captain Andros, that yourself and all the forces, are drawn off from the eastward parts. I admire at it, considering that they had so low esteem of what was done, that they can apprehend the eastward parts so safe before the enemy were brought into subjection. I was in hopes, when I came from thence, that those who were so desirous to have my room, would have been very brisk in my absence, to have got themselves some honor, which they very much gaped after, or else they would not have spread so many false reports to defame me—which had I known before I left the bank, I would have had satisfaction of them. Your honor was pleased to give me some small account, before I left the bank, of some things that were ill represented to you, concerning the eastward expedition, which being rolled home like a snow-ball through both colonies, was got to such a bigness that it overshadowed me from the influence of all comfort, or good acceptance among my friends in my journey homeward. But through God's goodness am come home, finding all well, and myself in good health, hoping that these reports will do me the favor to quit me from all other public actions, that so I may the more peaceably and quietly wait upon God, and be a comfort to my own family, in this dark time of trouble; being as one hid, till his indignation is overpast. I shall take it as a great favor to hear of your welfare.

Subscribing myself, as I am, sir,
Your most assured friend and servant,
BENJAMIN CHURCH

Major Church did receive, after this, answers to his letters, but has lost them, except it be a letter from several of the gentlemen in those parts, in June following, which is as follows:

Portsmouth, June 29, 1691.

Major Benjamin Church,

Sir:—

Your former readiness to expose yourself in the service of the country, against the common enemy, and particularly the late obligations you have laid upon us, in these eastern parts, leaves us under a deep and grateful sense of your favor therein; and, forasmuch, as you was pleased, when last here, to signify your ready inclination to further service of this kind, if occasion should call for it, we therefore presume confidently to promise ourselves compliance accordingly, and have sent this messenger on purpose to you, to let you know that, notwithstanding the late overture of peace, the enemy have proved themselves as perfidious as ever, and are almost daily killing and destroying upon all our frontiers. The governor and council of the Massachusetts have been pleased to order the raising of one hundred and fifty men, to be forthwith dispatched into those

parts; and, as we understand, have written to your governor and council of Plymouth for further assistance, which we pray you to promote, hoping if you can obtain about two hundred men, English and Indians, to visit them at some of their head quarters up Kennebeck river, or elsewhere, which, for want of necessaries, was omitted last year, it may be of great advantage to us. We offer nothing of advice as to what methods are most proper to be taken in this affair, your acquaintance with our circumstances as well as the enemies', will direct you therein. We leave the conduct thereof to your own discretion, but that the want of provision, &c. may be no remora to your motion, you may please to know Mr. Geafford, one of our principal inhabitants, now residing in Boston, both promised to take care to supply to the value of two or three hundred pounds, if occasion require. We pray a few lines by the bearer to give us a prospect of what we may expect for our further encouragement, and remain, sir,

Your obliged friends and servants,

William Vaughan, *Richard Martyn*,
Nathaniel Fryer, *William Fernald*,
Francis Hooke, *Charles Frost*,
John Wincol, *Robert Elliott*.

A true copy of the original letter—which letter was presented to me by Captain Hatch, who came express.

Major Church sent them his answer, the contents whereof was, that he had gone often enough for nothing, and especially to be ill-treated with scandals and false reports, when last out, which he could not forget; and signified to them, that doubtless some among them thought they could do without him.—And to make short of it, they did go out, and meeting with the enemy at Maquait, were most shamefully beaten, as I have been informed.

THE THIRD EXPEDITION EAST.

This was in the year 1692. In the time of Sir William Phips's government, Major Walley being at Boston, was requested by his excellency to treat with Major Church about going east with him. Major Walley coming home, did as desired; and to encourage the said Major Church, told him that now was the time to have recompense for his former great expenses, saying also, that the country could not give him less than two or three hundred pounds. So upon his excellency's request Major Church went down to Boston, and waited upon him, who said he was glad to see him, and after some discourse told the said Church that he was going east himself, and that he should be his second, and in his absence command all the forces. And being requested by his excellency to raise what volunteers he could of his old soldiers in the county of Bristol, both English and Indians, received his commission, which is as follows:

Sir William Phips, Knight, Captain General and Governor-in-Chief in and over his Majesty's province of the Massachusett's Bay in New England,

To Benjamin Church, Gent. Greeting.

Reposing special trust and confidence in your loyalty, courage, and good conduct, I do by these presents constitute and appoint you to be Major of the several companies of militia, detached for their Majesties' service against their French and Indian enemies.—You are therefore authorized and required in their Majesties' names, to discharge the duty of a major, by leading, ordering, and exercising the said several companies in arms, both inferior officers and soldiers, keeping them in good order and discipline, commanding them to obey you as their major; and diligently to intend the said service, for the prosecuting, pursuing, killing, and destroying of the said common enemy; and yourself to observe and follow such orders and directions as you shall from time to time receive from myself, according to the rules and discipline of war, pursuant to the trust reposed in you for their Majesties' service.—Given under my hand and seal at Boston, the 25th day of July, 1692, in the fourth year of the reign of our sovereign lord and lady William and Mary, by the grace of God, King and Queen of England, Scotland, France and Ireland, defenders of the faith.

WILLIAM PHIPS.

By his Excellency's command,
ISAAC ADDINGTON, Secretary.

Returning home to the county aforesaid, he soon raised a sufficient number of volunteers, both English and Indians, and officers suitable to command them, marched them down to Boston. But there was one thing I would just mention, which was, that Major Church, being short of money, was forced to borrow six pounds in money of Lieutenant Woodman, in Little-Compton, to distribute by a shilling and a bit at a time to the Indian soldiers, who, without such allurements, would not have marched to Boston. This money Major Church put into the hands of Mr. William Fobes, who was going out their commissary in that service, who was ordered to keep a just account of what each Indian had, so that it might be deducted out of their wages at their return home. Coming to Boston, his excellency having got things in a readiness, they embarked on board their transports, his excellency going in person with them, being bound to Pemequid, but in their way stopped at Casco, and buried the bones of the dead people there, and took off the great guns that were there; then went to Pemequid—coming there, his excellency asked Major Church to go ashore and give his judgment about erecting a fort there.—He answered, that his genius did not incline that way, for he never had any value for them, being only nests for destructions.—His excellency said, he had a special order from their Majesties King William and Queen Mary, to erect a fort there. Then they went ashore and spent some time in the projection thereof. Then his excellency told Major Church that he might take all the forces with him except one company to stay with him and work about the fort. The Major answered, that if his excellency pleased he might keep two companies with him, and he would go with the rest to Penobscot, and places adjacent. Which his excellency did, and gave Major Church his orders, which are as followeth:

By his excellency Sir William Phips, Knight, Captain General and Governor-in-Chief, in and over their Majesties' province of the Massachusett's Bay, in New England.

Instructions for Major Benjamin Church.

Whereas you are Major, and so chief officer of a body of men detached out of the militia appointed for an expedition against the French and Indian enemy, you are duly to observe the following instructions:

Imprimis. You are to take care that the worship of God be duly and constantly maintained and kept up among you, and to suffer no swearing, cursing, or other profanation of the holy name of God; and as much as in you lies, to deter and hinder all other vices amongst your soldiers.

2dly. You are to proceed with the soldiers under your command, to Penobscot, and with what privacy and undiscoverable methods you can, there to land your men, and take the best measures to surprise the enemy.

3dly. You are, by killing, destroying, and all other means possible, to endeavor the destruction of the enemy; in pursuance whereof, being satisfied of your courage and conduct, I leave the same to your discretion.

4thly. You are to endeavor the taking what captives you can, either men, women, or children, and the same safely to keep and convey them unto me.

5thly. Since it is not possible to judge how affairs may be circumstanced with you there, I shall therefore not limit your return, but leave it to your prudence, only that you make no longer stay than you can improve for advantage against the enemy, or may reasonably hope for the same.

6thly. You are also to take care and be very industrious by all possible means to find out and destroy all the enemies' corn, and other provisions in all places where you can come at the same.

7thly. You are to return from Penobscot and those eastern parts, to make all dispatch hence for Kennebeck river, and the places adjacent, and there prosecute all advantages against the enemy as aforesaid.

8thly. If any soldier, officer, or other shall be disobedient to you as their commander-in-chief, or other their superior officer, or make or cause any mutiny, commit other offence or disorders, you shall call a council of war amongst your officers, and having tried him or them so offending, inflict such punishment as the merit of the offence requires, death only excepted, which, if any shall deserve, you are to secure the person, and signify the crime unto me by the first opportunity.

Given under my hand this 11th day of August, 1692.

WILLIAM PHIPS.

Then the major and his forces embarked and made the best of their way to Penobscot; and coming to an island in these parts in the evening, landed his forces at one end of the said island. Then the major took

part of his forces and moved toward day to the other end of the said island, where they found two Frenchmen and their families in their houses, and that one or both of them had Indian women to their wives, and had children by them. The major presently examining the Frenchmen where the Indians were, they told him that there was a great company of them upon an island just by, and showing him the island, presently discovered several of them. Major Church and his forces still keeping undiscovered to them, asked the Frenchmen where their passing place was, which they readily showed them, so presently they placed an ambuscade to take any that should come over, then sent orders for all the rest of the forces to come, sending them an account of what he had seen and met withal, strictly charging them to keep themselves undiscovered by the enemy. The ambuscade did not lie long before an Indian man and woman came over in a canoe, to the place for landing, where the ambuscade was laid, who hauled up their canoe, and came right into the hands of our ambuscade, who so suddenly surprised them that they could not give any notice to the others from whence they came; the major ordering that none of his should offer to meddle with the canoe, lest they should be discovered, hoping to take the most of them, if his forces came as ordered, he expecting them to come as directed; but the first news he had of them was, that they were all coming, though not privately, as ordered; but the vessels fair in sight of the enemy, which soon put them all to flight; and our forces not having boats suitable to pursue them, they got all away in their canoes, which caused Major Church to say, he would never go out again without a sufficient number of whale-boats, which for want of, was the ruin of that action. Then Major Church, according to his instruction, ranged all those parts, to find all their corn, and carried aboard their vessels what he thought convenient, and destroyed the rest. Also, finding considerable quantities of plunder, viz. beaver, moose-skins, &c. Having done what service they could in those parts, he returned back to his excellency at Pemequid; where being come, staid not long, they being short of bread, his excellency intended home for Boston, for more provisions; but before going with Major Church and his forces to Kennebeck river, and coming there, gave him further orders, which are as follows:

By his Excellency the Governor,

To Major Benjamin Church.

You having already received former instructions, are now further to proceed with the soldiers under your command for Kennebeck river, and the places adjacent, and use your utmost endeavors to kill, destroy, and take captive the French and Indian enemy wheresoever you shall find any of them; and at your return to Pemequid (which you are to do as soon as you can conveniently, after your best endeavor done against the enemy, and having destroyed their corn and other provisions,) you are to stay with all your soldiers and officers, and set them to work on the fort; and make what dispatch you can in that business, staying there until my further order.

WILLIAM PHIPS.

Then his excellency taking leave went for Boston, and soon after Major Church and his force had a smart fight with the enemy in Kennebeck river, pursued them so hard that they left their canoes, and ran up into the woods, still pursued them up to their fort, at Taconock, which the enemy perceiving set fire to their houses in the fort, and ran away by the light of them; and when Major Church came to the said fort found about half their houses standing and the rest burnt; also found great quantities of corn, put up into Indian cribs, which he and his forces destroyed as ordered.

Having done what service he could in those parts, returned to Pemequid, and coming there employed his forces according to his instructions. Being out of bread, his excellency not coming, Major Church was obliged to borrow bread of the captain of the man-of-war that was then there, for all the forces under his command, his excellency not coming as expected; but at length his excellency came and brought very little bread more than would pay what was borrowed of the man-of-war; so that in a short time after Major Church, with his forces, returned home to Boston, and had their wages for their good service done. Only one thing by the way I will just mention, that is, about the six pounds Major Church borrowed as aforementioned, and put into the hands of Mr. Fobes, who distributed the said money, all but thirty shillings, to the Indian soldiers, as directed, which was deducted out of their wages, and the country had credit for the same; and the said Fobes kept the thirty shillings to himself, which was deducted out of his wages; whereupon Major Walley and said Fobes had some words. In short, Major Church was obliged to expend about six pounds of his own money in marching down the forces both English and Indians, to Boston, having no drink allowed them upon the road; so that instead of Major Church's having the allowances aforementioned by Major Walley, he was out of pocket about twelve pounds over and above what he had; all which had not been, had not his excellency been gone out of the country.

THE FOURTH EXPEDITION EAST.

In 1696, Major Church being at Boston, and belonging to the house of representatives, several gentlemen requested him to go east again, and the general court having made acts of encouragement, he told them, if they would provide whale-boats, and other necessaries convenient, he would. Being also requested by the said general court, he proceeded to raise volunteers, and made it his whole business, riding both east and west in our province and Connecticut, at great charge and expenses; and in about a month's time raised a sufficient number out of those parts, and marched them down to Boston; where he had the promise that every thing should be ready in three weeks or a month's time, but was obliged to stay considerably longer. Being now at Boston he received his commission and instructions; which are as follows:

William Stoughton, Esquire, Lieutenant Governor, and Commander-in-Chief, in and over his Majesty's province of the Massachusetts Bay, in New England,

To Major Benjamin Church, Greeting:

Whereas, there are several companies raised, consisting of Englishmen and Indians, for his majesty's service, to go forth upon the encouragement given by the great and general court, or assembly of this, his majesty's province, convened at Boston, the the 27th day of May, 1696, to prosecute the French and Indian enemy, &c. And you, having offered yourself to take the command and conduct of the said several companies; by virtue therefore of the power and authority in and by his majesty's royal commisssion to me granted, reposing special trust and confidence in your loyalty, prudence, courage, and good conduct, I do by these presents constitute and appoint you to be major of the said several companies, both Englishmen and Indians, raised for his majesty's service upon the encouragement aforesaid. You are therefore carefully and diligently to perform the duty of your place, by leading, ordering, and exercising the said several companies in arms, both inferior officers and soldiers, keeping them in good order and discipline, commanding them to obey you as their major: and yourself diligently to intend his majesty's service for the prosecuting, taking, killing, or destroying the said enemy by sea or land; and to observe all such orders and instructions as you shall from time to time receive from myself, or commander-in-chief for the time being, according to the rules and discipline of war, pursuant to the trust reposed in you. Given under my hand and seal at arms, at Boston, the third day of August, 1696, in the eighth year of the reign of our sovereign lord William the Third, by the grace of God, of England, Scotland, France, and Ireland, king, defender of the faith, &c.

WILLIAM STOUGHTON.

By command of the Lieut. Gov. &c.

ISAAC ADDINGTON, Secretary.

Province of the Massachusetts Bay.

By the Right Honorable the Lieutenant Governor and Commander-in-Chief.

Instructions for Major Benjamin Church, Commander of the forces raised for his Majesty's service, against the French and Indian enemy and rebels:

Pursuant to the commission given you, you are to embark the forces now furnished and equipped for his majesty's services on the present expedition, to the eastern parts of this province, and with them, and such others as shall offer themselves to go forth on the said service, to sail unto Piscataqua, to join those lately dispatched thither for the same expedition to await your coming; and with all care and diligence to improve the vessels, boats, and men under your command, in search for, prosecution and pursuit of, the said enemy, at such places where you

may be informed of their abode or resort, or where you may probably expect to find, or meet with them, and take all advantages against them which providence shall favor you with.

You are not to list or accept any soldiers that are already in his majesty's pay, and post·d at any town or garrison within this province, without special order from myself.

You are to require and give strict orders that the duties of religion be attended on board the several vessels, and in the several companies under your command, by daily prayers unto God, and reading his holy word, and observance of the Lord's day, to the utmost you can.

You are to see that your soldiers have their due allowance of provisions and other necessaries, and that the sick or wounded be accommodated in the best manner your circumstances will admit. And that good order and command may be kept up and maintained in the several companies, and all disorders, drunkenness, profane cursing, swearing, disobedience to officers, mutinies, omissions, or neglect of duty, be duly punished according to the laws martial. And you are to require the captain or chief officer of each company, with the clerk of the same, to keep an exact journal of all their proceedings from time to time.

In case any of the Indian enemy and rebels offer to submit themselves, you are to receive them only at discretion; but if you think fit to improve any of them, or any others which you may happen to take prisoners, you may encourage them to be faithful by the promise of their lives, which shall be granted upon approbation of their fidelity.

You are carefully to look after the Indians which you have out of the prison, so that they may not have opportunity to escape, but otherwise improve them to what advantage you can, and return them back again to this place.

You are to advise, as you can have occasion, with Captain John Gorham, who accompanies you in this expedition, and is to take your command in case of your death. A copy of these instructions you are to leave with him, and to give me an account from time to time of your proceedings.

WILLIAM STOUGHTON.

Boston, August 12th, 1696.

In the time Major Church lay at Boston, the news came of Pemequid fort being taken; it came by a shallop that brought some prisoners to Boston, who gave an account also, that there was a French ship at Mount-Desart, who had taken a ship of ours; so the discourse was that they would send the man-of-war, with other forces to take the said French ship, and retake ours. But in the mean-time Major Church and his forces being ready, embarked, and on the 15th day of August set sail for Piscataqua, where more men were to join them, but before they left Boston, Major Church discoursed with the captain of the man-of-war, who promised him, if he went to Mount-Desart, in pursuit of the French ship, that he would call for him and his forces at Piscataqua, expecting that the French and Indians might not be far from the said French ship, so that he might have an opportunity to fight them while he was engaged with the French ship. Soon after the forces arrived at Piscataqua, the major sent his Indian soldiers to Colonel Gidney, at York, to be assisting for the defence of those places; who gave them a good commend for their ready and willing services done, in scouting, and the like.—Lying at Piscataqua with the rest of our forces near a week, waiting for more forces who were to join them, to make up their complement, in all which time heard never a word of the man-of-war. On the 22d of August they all embarked for Piscataqua, and when they came against York, the major went ashore, sending Captain Gorham with some forces, in two brigantines and a sloop to Winter-Harbour, ordering him to send out scouts, to see if they could make any discovery of the enemy, and to wait there till he came to them. Major Church coming to York, Colonel Gidney told him his opinion was, that the enemy was drawn off from those parts, for that the scouts could not discover any of them, nor their tracks. So having done his business there, went, with what forces he had there, to Winter-Harbour, where he had the same account from Captain Gorham, that they had not discovered any of the enemy, nor any new tracks; so, concluding they were gone from those parts towards Penobscot, the major ordered all the vessels to sail and make the best of their way to Monbegin, which being not far from Penobscot, where the main body of our enemies was living; being in great hopes to come up with the army of French and Indians, before they had scattered and were gone past Penobscot, or Mount-Desart, which is the chief place of their departure from each other after such actions; and having a fair wind, made the best of their way, and early next morning they got into Monhegin, and there lay all day fitting their boats and other necessaries to embark in the night at Mussel-neck with their boats; lying there all day to keep undiscovered from the enemy; at night the major ordered the vessels all to come to sail, and carry the forces over the bay, near Penobscot, but having little wind he ordered all the soldiers to embark on board the boats with eight days' provision, and sent the vessels back to Monhegin, that they might not be discovered by the enemy; giving them orders when and where they should come to him. The forces being all ready in their boats, rowing very hard, got ashore at a point near Penobscot, just as the day broke and hid their boats, and keeping a good look out by sea, and sent scouts out by land; but could not discover either canoes or Indians; what tracks and fire places they saw were judged to be seven or eight days before they came. As soon as night came, that they might be undiscovered, got into their boats, and went by Mussel-neck, and so amongst Penobscot Islands, looking very sharp as they went for fires on the shore, and for canoes, but found neither; getting up to Mathebestucks hills, day coming on, landed, and hid their boats, looking out for the enemy, as the day before, but to little purpose. Night coming on, to their oars again, working very hard, turned the night into day; made several of their new soldiers grumble, but telling them they hoped to come up quickly with the enemy, put new life into them, and by day-light they got into the mouth of the river, where landing, found many rendezvous and fire places where the Indians had been, but at the same space of time as before mentioned; and no canoes passed up the river that day. Their pilot, Joseph York, informed the major that 50 or 60 miles up that river, at the great falls, the enemy had a great rendezvous, and planted a great quantity of corn, when he was a prisoner with them, four years ago, and that he was very well acquainted there; this gave great encouragement to have some considerable advantage of the enemy at that place; so using their utmost endeavours to get up there undiscovered, and coming there found no enemy, nor corn planted, they having deserted the place. And ranging about the falls on both sides of the river, leaving men on the east side of the said river, and the boats just below the falls, with a good guard to secure them, and to take the enemy if they came down the river in their canoes. The west side being the place where the enemy lived, and best to travel on, they resolved to range as privately as they could; a mile or two above the falls discovered a birch canoe coming down with two Indians in it, the major sent word immediately back to those at the falls, to lie very close, and let them pass down the falls, and to take them alive, that he might have intelligence where the enemy was, which would have been a great advantage to them, but a foolish soldier seeing them passing by him, shot at them, contrary to orders given, which prevented them going into the ambuscade that was laid for them; whereupon several more of our men being near, shot at them; so that one of them could not stand when he got ashore, but crept away into the brush, the other stepped out of the canoe with his paddle in his hand, and ran about a rod, and then threw down his paddle, and turned back and took up his gun, so escaped. One of our Indians swam over the river, and fetched the canoe, wherein was a considerable quantity of blood on the seats, that the Indians sat on; the canoe having several holes shot in her. They stopped the holes, and then Captain Bracket, with an Indian soldier, went over the river, who tracked them by the blood about half a mile, found his gun, took it up, and seeing the blood no farther, concluded that he stopped his blood, and so got away. In the mean-time another canoe with three men were coming down the river, were fired at by some of our forces, ran ashore, and left two of their guns in the canoe, which were taken, and also a letter from a priest to Casteen, that gave him an account of the French and Indians returning over the lake to Mount-Royal, and of their little service done upon the Maquas Indians westward, only demolishing one fort, and cutting down some corn. He desiring to hear of the proceedings of Deborabuel, and the French man-of-war; and informed him that there were several canoes coming with workmen from Quebec, to St. John's, where since we concluded, it was to build a fort at the river's mouth, where the great guns were

taken. It being just night, the officers were called together to advise, and their pilot, York, informed them of a fort up that river, and it was built on a little island in that river, and there was no getting to it but in canoes, or on the ice in the winter time. This, with the certain knowledge that we were discovered by the enemy that escaped out of the upper canoe, concluded it not proper, at that time, to proceed any further up, and that there was no getting any further with our boats; and the enemy being alarmed would certainly fly from them, and do as they did four years ago at their fort at Taconock; having sought them in Kennebeck river, and pursued them about thirty miles to Taconock; for they then set their fort on fire, and run away by the light of it, our forces not being able to come up with them at that place. Major Church then encouraging his soldiers, told them, he hoped they should meet with part of the enemy in Penobscot Bay, or at Mount-Desart, where the French ships were. So, notwithstanding they had been rowing several nights before, with much toil, besides were short of provisions, they cheerfully embarked on board their boats, and went down the river, both with and against the tide; and next morning came to their vessels, where the major had ordered them to meet him, who could give him no intelligence of any enemy. Where being come, they refreshed themselves; meeting then with another disappointment, for their pilot, York, not being acquainted any further, began to lament the loss of one Robert Cawley, who they chiefly depended on for all the service to be done now eastward; he having been taken away from them the night before they set sail from Boston (and was on board Mr. Thorp's sloop) and put on board the man-of-war, unknown to Major Church; notwithstanding he had been at the charge and trouble of procuring him. Then the major was obliged to one Bord, procured by Mr. William Alden, who being acquainted in those parts, to leave his vessel, and go with him in the boats, which he readily complied with, and so went to Nasket-point; where being informed was a likely place to meet with the enemy; coming there found several houses and small fields of corn, the fires having been out several days, and no new tracks.—But upon Penobscot island they found several Indian houses, corn and turnips, though the enemy still being all gone, as before mentioned. Then they divided and sent their boats some one way, and some another, thinking that if any straggling Indians, or Casteen himself, should be thereabout, they might find them, but it proved all in vain.—Himself and several boats went to Mount-Desart, to see if the French ships were gone, and whether any of the enemy might be there, but to no purpose, the ships being gone, and the enemy also. They being now got several leagues to the westward of their vessels, and seeing that the way was clear for their vessels to pass, and all their extreme rowing, and travelling by land and water, night and day, to be all in vain, the enemy having left those parts, as they judged, about eight or ten days before. And then returning to their vessels, the commander calling his officers together, to consult and resolve what to do, concluding that the enemy, by some means or other had received some intelligence of their being come out against them, and that they were in no necessity to come down to the sea side as yet, moose and beaver now being fat. They then agreed to go far east and employ themselves, that the enemy belonging to those parts might think that they were gone home. Having some discourse about going over to St. John's; but the masters of the vessels said, he had as good carry them to old France, which put off that design, they concluding that the French ships were there. Then the major moved for going over the bay, towards Labane, and towards the gut of Cancer, where was another considerable fort of Indians, who often came to the assistance of our enemy, the barbarous Indians; saying that by the time they should return again, the enemy belonging to these parts would come down again, expecting that we are gone home. But in short, could not prevail with the masters of the open sloops to venture across the bay; who said it was very dangerous so late in the year, and as much as their lives were worth. Then they concluded and resolved to go to Senactaca, wherein there was a ready compliance, but the want of their pilot, Robert Cawley, was a great damage to them, who knew all those parts: however, Mr. John Alden, master of the brigantine Endeavor, piloted them up the bay to Senactaca; and coming to Grindstone-point, being not far from Senectaca; then came to with all the vessels, and early next morning came to sail, and about sun-rise got into town; but it being so late before we landed, that the enemy, most of them, made their escape, and as it happened landed where the French and Indians had some time before killed Lieutenant John Paine, and several of Captain Smithson's men, that were with said Paine. They, seeing our forces coming, took the opportunity, fired several guns, and so ran all into the woods, carrying all or most part of their goods with them. One Jarman Bridgway came running towards our forces, with a gun in one hand, and his cartridge-box in the the other, calling to our forces to stop, that he might speak with them; but Major Church thinking it was that they might have some advantage, ordered them to run on; when the said Bridgway saw they would not stop, turned and ran, but the major called unto him, and bid him stop, or he would be shot down; some of our forces being near to the said Bridgway, said it was the General that called to him. He hearing that, stopped and turned about, laying down his gun, stood, till the major came up to him; his desire was that the commander would make haste with him to his house, lest the savages should kill his father and mother, who were upward of fourscore years of age and could not go.—The major asked the said Bridgway whether there were any Indians among them, and where they lived; he shook his head, and said, he durst not tell, for if he did they would take an opportunity and kill him and his; so all that could be got out of him was, that they were run into the woods with the rest. Then orders were given to pursue the enemy, and to kill what Indians they could find, and take the French alive, and give them quarter if they asked it. Our forces soon took three Frenchmen, who, upon examination, said, that the Indians were all run into the woods. The French fired several guns at our forces, and ours at them; but they being better acquainted with the woods than ours, got away. The major took the aforesaid Jarman Bridgway for a pilot, and with some of his forces went over a river, to several of their houses, but the people were gone and carried their goods with them; in ranging the woods fouud several Indian houses, their fires being just out, but no Indians. Spending that day in ranging to and fro, found considerable of their goods, and but few people; at night the major writ a letter, and sent out two French prisoners, wherein was signified, that if they would come in, they should have good quarters.—The next day several came in, which did belong to that part of the town where our forces first landed, who had encouragements given them by our commander, that if they would assist him in taking those Indians which belonged to those parts, they should have their goods returned to them again, and their estates should not be damnified; which they refused. Then the major and his forces pursued their design, and went further, ranging their country, found several more houses, but the people fled, and carried what they had away; but in a creek found a prize bark, that was brought in there by a French privateer. In ranging the woods took some prisoners, who upon examination gave our commander an account, that there were some Indians upon a neck of land, towards Menis; so a party of men was sent into those woods, and in their ranging about the said neck found some plunder, and a considerable quantity of whortleberries, both green and dry, which were gathered by the Indians, and had like to have taken two Indians, who, by the help of a birch canoe, got over the river, and made their escape. Also they found two barrels of powder, and near half a bushel of bullets; the French denying it to be theirs, said they were the savages', but sure it was a supply for our enemies; also they took from Jarman Bridgway several barrels of powder, with bullets, shot, spears, and knives, and other supplies to relieve our enemies; he owning that he had been trading with those Indians along Cape-Sable shore, with Peter Assnow, in sloop our forces took from him; and that there he met with the French ships, and went along with them to St. John's, and helped them to unload the said ships, and carried up the river provisions, ammunition, and other goods to Vilboon's fort.

The major having ranged all places that were thought proper, returned back to the place where they first landed, and finding several prisoners come in, who were troubled to see their cattle, sheep, hogs, and dogs lying dead about their houses, chopped and hacked with hatchets; which was done without order from the major, however he told them it was nothing to what our poor English, in our frontier towns, were forced to look upon; for men, women, and children were chopped and hacked so, and left half dead, with all their scalps taken off, and that they and their Indians served ours so; and our

savages would be glad to serve them so too, if he would permit them! which caused them to be mighty submissive, and begged the major that he would not let the savages serve them so. Our Indians being somewhat sensible of the discourse, desired to have some of them to roast, and so make a dance; and dancing in a hideous manner, to terrify them, said, that they could eat any sort of flesh, and that some of theirs would make their hearts strong; stepping up to some of the prisoners, said, they must have their scalps, which much terrified the poor prisoners, who begged for their lives. The major told them he did not design the savages should hurt them; but it was to let them see a little what the poor English felt, saying, it was not their scalps he wanted, but the savages, for he should get nothing by them; and told them, that their fathers, the friars and governors, encouraged their savages, and gave them money to scalp our English, notwithstanding they were with them; which several of our English, there present, did testify to their faces, that their fathers and mothers were served so in their sight. But the major bid them tell their fathers, the friars and governors, that if they still persisted, and let their wretched savages kill and destroy the poor English at that rate, he would come with some hundreds of savages, and let them loose among them, who would kill, scalp, and carry away every French person in all those parts, for they were the root from whence all the branches came that hurt us; for the Indians could not do us any harm, if they did not relieve and supply them.—The French being sensible of the major's kindness to them, kissed his hand, and were very thankful to him for his favour to them in saving their lives; owned that their priests were at the taking of Pemequid fort, and were now gone to Laybone, with some of the Indians, to meet the French ships, but for what they would not tell. The commander with his forces, having done all they could in those parts, concluded to go to St. John's river, to do further service for their king and country, embarked all on board their transports; and having a fair wind, soon got to Monogenest which lies a little distance from the mouth of St. John's river. Next morning early, the major, with his forces landed to see what discovery they could make, travelled across the woods to the old fort or falls at the mouth of St. John's river, keeping themselves undiscovered from the enemy; finding that there were several men at work, and having informed themselves as much as they could, the enemy being on the other side of the river, could not come at them, returned back, but night coming on, and dark wet weather, with bad travelling, was obliged to stop in the woods until towards day next morning, and then went on board; soon after the major ordered all the vessels to come to sail, and go into the mouth of the river; being done, it was not long before the major and his forces landed on the east side of the river, the French firing briskly at them, but did them no harm; and running fiercely upon the enemy, they soon fled into the woods. The major ordered a brisk party to run across a neck to cut them off from their canoes, which the day before they had made a discovery of; so the commander, with the rest, ran directly towards the new fort they were building, not knowing but they had some ordnance mounted. The enemy running directly to their canoes, were met by our forces, who fired at them, and killed one, and wounded Corporal Canton, who was taken, the rest threw down what they had and ran into the woods. The said prisoner, Canton, being brought to the major, told him, if he would let his surgeon dress his wound and cure him, he would be serviceable to him as long as he lived; so, being dressed, he was examined, who gave the major an account of the twelve great guns which were hid in the beach, below high water mark; the carriages, shot, and wheelbarrows, some flour and pork, all hid in the woods. And the next morning the officers being all ordered to meet together to consult about going to Vilboon's fort, and none amongst them being acquainted but the Aldens, who said the water in the river was very low, so that they could not get up to the fort, and the prisoner, Canton, told the commander, that what the Aldens said was true; so not being willing to make a Canada expedition, concluded it was not practicable to proceed. Then ordered some of the forces to get the great guns on board the open sloops, and the rest to range the woods for the enemy, who took one prisoner, and brought in; who in their ranging found there a shallop haled in a creek, and a day or two after there came in a young soldier to our forces, who, upon examination, gave an account of two more which he left in the woods at some distance; so immediately the major with some of his forces went in pursuit of them, taking the said prisoner with them, who conveyed them to the place where he left them, but they were gone. Then asked the prisoner, whether there were any Indians in those parts.—Said no, it was as hard for Vilboon, their governor, to get an Indian down to the water side, as it was for him to carry one of those great guns upon his back to his fort; for they having had intelligence by a prisoner out of Boston gaol, that gave them an account of Major Church and his forces coming out against them. Now having with a great deal of pains and trouble got all the guns, shot, and other stores aboard, intended on our design which we came out first for, but the wind not serving, the commander sent out his scouts into the woods, to seek for the enemy, and four of our Indians came upon three Frenchmen undiscovered, who concluded that if the French should discover them, would fire at them, and might kill one or more of them, which to prevent, fired at the French, killed one, and took the other two prisoners; and it happened that he who was killed was Shanelere, the chief man there. The same day they mended their whale-boats, and the shallop which they took, fitting her to row with eight oars, that she might be helpful to their prosecuting their intended design against the enemy in their returning homeward. Then the commander ordering all the officers to come together, informed them of his intentions, and ordered that no vessels should depart from the fleet, but to attend the motions of their commodore, as formerly, except they were parted by storms, or thick fogs, and if so it should happen that any did part, when they came to Passamequady, should stop there a while, for there they intended to stop, and do business with the help of their boats against the enemy, and if they missed that, to stop at Machias; which was the next place he intended to stop at, having an account by the prisoners taken, that Mr. Lateril was there trading with the Indians in that river. Encouraging them said, he did not doubt but to have a good booty there; and if they should pass those two places, be sure not to go past Naskege-point, but to stop there till he came, and not to depart thence in a fortnight without his orders, having great service to do in and about Penobscot. Then the major discoursed with Captain Brackit, Captain Hunewell, and Captain Larking, with their lieutenants, commanders of the forces belonging to the eastward parts, who were to discourse their soldiers about their proceeding, when they came to Penobscot; and the major himself was to discourse his Indian soldiers, and their captains: who with all the rest readily complied. The projection being such, that when they came to Penobscot, the commander designed to take what provisions could be spared out of all the sloops, and put on board the two brigantines, and to send all the sloops home with some of the officers and men that wanted to be at home; and then with those forces aforementioned to wit. the eastward men and all the Indians; and to take what provisions and ammunition was needful, and to march with himself up into the Penobscot country, in search for the enemy, and if possible to take that fort in Penobscot river. Captain Brackit, informing the major, that when the water was low they could wade over, which was (at that time) the lowest that had been known in a long time. And being there, to range through that country down to Pemequid; where he intended the two brigantines should meet them; and from thence taking more provisions, viz. bread salt, and ammunition suitable (to send those two vessels home also) to travel through the country to Nerigiwack, and from thence to Ameras-cogen fort, and so down where the enemy used to plant, not doubting but that in all this travel to meet with many of the enemy before they should get to Piscataqua. All which intentions were very acceptable to the forces that were to undertake it, who rejoicing, said, they had rather go home by land than by water, provided their commander would go with them; who, to try their fidelity, said, he was grown ancient and might fail them; they all said they would not leave him, and when he could not travel any further, they would carry him. Having done what service they could at and about the mouth of St. John's river, resolved on their intended design; and the next morning having but little wind, came all to sail, the wind coming against them, they put into Mushquash-Cove, and the next day, the wind still being against them, the major with part of his forces landed, and employed themselves in ranging the country for the enemy, but to no purpose; and in the night, the wind came pretty fair, and at 12 o'clock they came to sail, and had not been long bo-

fore they spyed three sail of vessels; expecting them to be French, fitted to defend themselves, so coming near, hailed them; who found them to be a man-of-war, the Province-Galley, and old Mr. Alden in a sloop, with more forces, Colonel Hathorne commander. Major Church went aboard the commodore, where Colonel Hathorne was, who gave him an account of his commission and orders, and read them to him. Then his honor told Major Church, that there was a particular order on board Captain Southback for him, which is as follows: —

Boston, September 9th, 1696.

Sir:

His Majesty's ship Orford having lately surprised a French shallop, with twenty-three of the soldiers belonging to the fort upon John's river, in Nova-Scotia, together with Villeau, their captain, Providence seems to encourage the forming of an expedition to attack that fort, and to disrest and remove the enemy from that post, which is the chief source from whence the most of our disasters do issue, and also to favour with an opportunity for gaining out of their hands the ordnance, artillery, and other warlike stores, and provisions, lately supplied to them from France, for erecting a new fort near the river's mouth, whereby they will be greatly strengthened, and the reducing of them rendered more difficult. I have therefore ordered a detachment of two new companies, consisting of about an hundred men to join the forces now with you for that expedition, and have commissioned Lieutenant Colonel John Hathorne, one of the members of his Majesty's council, who is acquainted with that river, and in whose courage and conduct I repose special trust, to take the chief command of the whole during that service, being well assured that your good affections and zeal for his Majesty's service will induce your ready compliance and assistance therein, which, I hope, will take up no long time, and be of great benefit and advantage to these his Majesty's territories, if it please God to succeed the same. Besides, it is very probable to be the fairest opportunity that can be offered unto yourself and men, of doing execution upon the Indian enemy and rebels, who may reasonably be expected to be drawn to the defence of that fort. I have also ordered his Majesty's ship Arundel, and the Province-Galley, to attend this service.

Colonel Hathorne will communicate unto you the contents of his commission and instructions received from myself for this expedition, which I expect and order that yourself, officers, and soldiers, now under you, yield obedience unto. He is to advise with yourself and others in all weighty attempts. Praying for a blessing from Heaven upon the said enterprise, and that all engaged in the same may be under the special protection of the Almighty,

I am your loving friend,

WILLIAM STOUGHTON.

The Major having read his last orders, and considering his commission, found that he was obliged to attend all orders, was much concerned that he and his were prevented in their intended projection, if carried back to St. John's. Then discoursing with Colonel Hathorne, gave him an account of what they had done at St. John's, viz. that as to demolishing the new fort they had done it, and got all their great guns and stores aboard their vessels; and that if it had not been that the waters were so low would have taken the fort up the river also before he came away; told him also that one of the prisoners which he had taken at St. John's, upon examination, concerning the Indians in those parts, told him it was as hard for Vilboon, their governor, to get one of their Indians down to the water side, as to carry one of those great guns upon his back; and that they had an account of him and his forces coming to those parts by a prisoner out of Boston gaol; also told his honor, that if they went back it would wholly disappoint them of their doing any further service, which was that they came for to Penobscot, and places adjacent; but all was to no purpose, his honor telling the major that he must attend his orders then received. And to encourage the officers and soldiers told them, they should be wholly at the major's ordering and command in the whole action; and to be short did go back, and the event may be seen in Colonel Hathorne's Journal of the said action. Only I must observe one thing by the way which was, that when they drew off to come down the river again, Colonel Hathorne came off and left the major behind to see that all the forces were drawn off; and coming down the river, in or near the rear, in the night heard a person hallow, not knowing at first but it might be a snare to draw them into; but upon consideration, sent to see who or what he was, found him to be a negro man belonging to Marblehead, that had been taken, and kept a prisoner among them for some time. The major asked him whether he could give any account of the Indians in those parts. He said, yes, they were or had been all drawn off from the sea coast, up into the woods, near an hundred miles, having had an account by a prisoner out of Boston gaol, that Major Church and his forces were coming out against them in four brigantines, and four sloops, with twenty-four pettiaugers, meaning whale-boats, which put them into a fright, that notwithstanding they were so far up in the woods, were afraid to make fires by day, lest he and his forces should discover the smokes, and in the night lest they should see the light. One thing more I would just give a hint of, that is, how the French in the eastward parts were much surprised at the motion of the whale-boats; said, there was no abiding for them in that country; and I have been informed since, that soon after this expedition, they drew off from St. John's fort and river. But to return: then going all down the river, embarked and went homeward; only by the way, candid reader, I would let you know of two things that proved very prejudicial to Major Church and his forces. The first was, that the government should miss it so much as to send any prisoner away from Boston before the expedition was over. Secondly, that they should send Colonel Hathorne to take them from the service and business they went to do; who, with submission, doubtless thought they did for the best, though it proved to the contrary; so shall wind up with a just hint of what happened at their coming home to Boston. After all their hard service both night and day, the government took away all the great guns, and warlike stores, and gave them not a penny for them, except it was some powder, and that they gave what they pleased for; and besides the assembly passed a vote that they should have but half pay; but his honor the lieutenant governor being much disturbed at their so doing, went into the town-house, where the representatives were sitting, and told them, except they did re-assume that vote, which was to cut Major Church and his forces off their half-pay, they should sit there till the next spring. Whereupon it was re-assumed; so that they had just their bare wages. But as yet never had any allowance for the great guns and stores; neither has Major Church had any allowance for all his travel and great expenses in raising the said forces volunteers.

THE FIFTH AND LAST EXPEDITION EAST.

In the year 1703-4, Major Church had an account of the miserable devastations made on Deerfield, a town in the westward parts of this province, and the horrible barbarities and cruelties exercised on those poor innocent people, by the French and Indians, especially of their cruelties towards that worthy gentlewoman Mrs. Williams, and several others, whom they marched in that extreme season; forcing them to carry great loads, and when any of them by their hard usage could not bear with it, were knocked on the head, and so killed in cool blood. All which, with some other horrible instances done by those barbarous savages, which Major Church himself was an eye-witness to in his former travel in the eastward parts, did much astonish him. To see a woman that those barbarous savages had taken and killed, exposed in a most brutish manner (as can be expressed) with a young child seized fast with strings to her breast; which infant had no apparent wound, which doubtless was left alive to suck its dead mother's breast, and so miserably to perish and die. Also to see other poor children hanging upon fences dead, of either sex, in their own poor rags, not worth their stripping them off, in scorn and derision. Another instance was, of a straggling soldier who was found at Casco, exposed in a shameful and barbarous manner; his body being staked up, his head cut off, and a hog's head set in the room, his body ripped up, and his heart and inwards taken out, and hung with belts of their own, the inwards at the side of his body, in scorn and derision of the English soldiers. These and such like barbarities caused Major Church to express himself to this purpose, that if he were commander-in-chief of these provinces, he would soon put an end to those barbarities done by the barbarous enemy, by making it his whole business to fight and destroy those savages, as they did our poor neighbors; which doubtless might have been done if rightly managed, and that in a short time. So that these, with the late inhumanities done upon the inhabitants of Deerfield, made such an

impression on his heart as cannot well be expressed; so that his blood boiled within him, making such impulses on his mind, that he forgot all former treatments, which were enough to hinder any man, especially the said Major Church, from doing any further service. Notwithstanding all which, having a mind to take some satisfaction on the enemy, his heart being full, took his horse and went from his own habitation, near seventy miles, to wait upon his excellency, and offered his service to the queen, his excellency, and the country; which his excellency readily accepted of, and desired Major Church to draw a scheme for the ensuing action, or actions; so taking leave went home, and drew it; which is as follows:

Tiverton, February 5, 1703-4.

May it please your Excellency,

According to your request, when I was last with yourself, and in obedience thereunto, I present you with these following lines, that concern the preparation for next spring's expedition to attack the enemy. According to my former direction, for it is good to have a full stroke at them first, before they have opportunity to run for it; for the first of our action will be our opportunity to destroy them, and to prevent their running away, in way-laying every passage; and make them know we are in good earnest, and so we being in a diligent use of means, we may hope for a blessing from the Almighty, and that He will be pleased to put a dread in their hearts, that they may fall before us and perish. For my advice is,

1st. That ten or twelve hundred good able soldiers well equipped, be in a readiness fit for action, by the first of April at farthest, for then will be the time to be upon action.

2dly. That five and forty, or fifty good whale-boats be had ready, well fitted, with five good oars, and twelve or fifteen good paddles to every boat; and upon the wale of each boat five pieces of strong leather be fastened on each side, to slip five small ash bars through, that so, whenever they land, the men may step overboard, and slip in said bars across, and take up said boat, that she may not be hurt against the rocks; and that two suitable brass kettles be provided to belong to each boat, to dress the men's victuals in, to make their lives comfortable.

3dly. That four or five hundred pair of good Indian shoes be made ready, fit for the service, for the English and Indians, that must improve the whale-boats, and birch canoes, for they will be very proper and safe for that service; and let there be a good store of cow-hides, well tanned, for a supply of such shoes; and hemp to make thread, and wax, to mend and make more such shoes when wanted, and a good store of awls.

4thly. That there be an hundred large hatchets, or light axes, made pretty broad, and steeled with the best steel that can be got, and made by good workmen, that may cut well and hold, that the hemlock knots may not break or turn them, to widen the landing place up the falls, for it may happen that we may get up with some of our whale-boats to their falls or head-quarters.

5thly. That there be a suitable quantity of small bags, or wallets provided, that every man that wants may have one, to put up his bullets in, of such a size as will fit his gun, and not be served as at Casco. That every man's bag be so marked that he may not change it: for if so, it will make a great confusion in action; that every man's store of ball be weighed to him, that so he may be accountable, and may not squander it away; and also his store of powder, that so he may try his powder and gun before action. And that every particular company may have a barrel of powder to themselves, and so marked that it may by no means be changed; that men may know beforehand, and may not be cheated out of their lives, by having bad powder, or not knowing how to use it: and this will prove a great advantage to the action.

6thly. That Colonel John Gorham, if he may be prevailed with, may be concerned in the management of the whale-boats, he having been formerly concerned in the eastern parts, and experienced in that affair. And whale-men then will be very serviceable in this expedition, which having a promise made to them, that they shall be released in good season, to go home a whaling in the fall, your excellency will have men enough.

7thly. That there may be raised for this service three hundred Indians at least, and more if they may be had; for I know certainly of my own knowledge, that they exceed most of our English in hunting and skulking in the woods, being always used to it; and it must be practised if ever we intend to destroy those Indian enemies.

8thly. That the soldiers already out eastward in the service, men of known judgment, may take a survey of them and their arms; and see if their arms be good, and that they know how to use them, in shooting right at a mark; and that they be men of good reason and sense, to know how to manage themselves in so difficult a piece of service, as this Indian hunting is; for bad men are but a clog and hindrance to an army, being a trouble and vexation to good commanders, and so many mouths to devour the country's provision, and a hindrance to all good action.

9thly. That special care be had in taking up the whale-boats, that they be good and fit for that service; so that the country be not cheated, as formerly, in having rotten boats; and as much care that the owners may have good satisfaction for them.

10thly. That the tenders or transports, vessels to be improved in this action, be good decked vessels, not too big, because of going up several rivers; having four or six small guns a piece for defence, and the fewer men will defend them. And there are enough such vessels to be had.

11thly. To conclude all, if your excellency will be pleased to make yourself great, and us a happy people, as to the destroying of our enemies, and easing of our taxes, &c. be pleased to draw forth all those forces now in pay in all the eastward parts, both at Saco and Casco-Bay; for those two trading houses never did any good, nor ever will, and are not worthy the name of Queen's forts; and the first building of them had no other effect, but to lay us under tribute to that wretched pagan crew; and I hope never will be wanted for that they were first built for: but sure it is, they are very serviceable to them, for they get many a good advantage of us to destroy our men, and laugh at us for our folly, that we should be at so much cost and trouble to do a thing that does us so much harm, and no manner of good. But to the contrary, when they see all our forces drawn forth, and in the pursuit of them, they will think that we begin to be roused up, and to be awake, and will not be satisfied with what they have pleased to leave us, but are resolved to retake from them, that they took formerly from us, and drive them out of their country also. The which being done, then to build a fort at a suitable time, and in a convenient place; and it will be very honorable to your excellency, and of great service to her majesty, and to the enlargement of her majesty's government; (the place meant being at Port-Royal.)

12thly. That the objection made against drawing off the forces in the eastward parts will be no damage to the inhabitants; for former experience teacheth us, that so soon as drawn into their country, they will presently forsake ours to take care of their own. And that there be no failure in making preparation of these things aforementioned, for many times the want of small things prevents the completing of great actions; and that every thing be in readiness before the forces be raised, to prevent charges, and the enemy having intelligence. And that the general court be moved to make suitable acts, for the encouraging both English and Indians; that so men of business may freely offer estates and concerns to serve the public.

Thus hoping what I have taken the pains to write in the sincerity of my heart and good affection, will be well accepted, I make bold to subscribe, as I am, your excellency's most devoted humble servant,

BENJAMIN CHURCH.

Then returning to his excellency presented the said scheme, which his excellency approved of, and returned it again to Major Church, and desired him to see that every thing was provided, telling him that he should have an order from the commissary general to proceed. Then returned home and made it his whole business to provide oars and paddles, and a vessel to carry them round; and then returned again to his excellency, who gave him a commmission. Which is as follows:

Joseph Dudley, Esq., Captain General and Governor-in-Chief in and over her Majesty's Provinces of the Massachusetts-Bay and New-Hampshire, in New-England, in America, and Vice-Admiral of the same.

To Benjamin Church, Esq., Greeting:

By virtue of the power and authority, in and by her majesty's royal commission, to me granted, I do by these presents, reposing special trust and confidence in your loyalty, courage, and good conduct, constitute and appoint you to be colonel of all the forces raised, and to be raised for her majesty's service, against the French and Indian enemy and rebels, that shall be improved in the service to the eastward of Casco-Bay; and to

be captain of the first company of the said forces. You are therefore carefully and diligently to perform the duty of a colonel and captain, by leading, ordering, and exercising the said company and regiment in arms, both inferior officers and soldiers; and to keep them in good order and discipline. Hereby commanding them to obey you as their colonel and captain; and with them to do and execute all acts of hostility against the said enemy and rebels. And you are to observe and follow such orders and directions as you shall receive from myself, or other your superior officer, according to the rules and discipline of war, pursuant to the trust reposed in you. Given under my hand and seal at arms, at Boston, the 18th day of March, in the third year of her majesty's reign. Anno Dom. 1703-4.

J. DUDLEY.

By his Excellency s command,
ISAAC ADDINGTON, Secretary.

Colonel Church no sooner received his commission, but proceeded to the raising of volunteers, by going into every town within the three counties, which were formerly Plymouth government; advising with the chief officer of each company, to call his company together, that so he might have the better opportunity to discourse and encourage them to serve their queen and country; treating them with drink convenient, told them he did not doubt but with God's blessing to bring them all home again. All which, with many other arguments, animated their hearts to do service, so that Colonel Church enlisted out of some companies near twenty men, and others fifteen. He having raised a sufficient number of English soldiers, proceeded to the enlisting of Indians in all those parts where they dwelt, which was a great fatigue and expense; being a people that need much treating, especially with drink. Having enlisted the most of his soldiers in those parts, who daily lay upon him, was not less than 5*l.* per day expenses, some days, in victuals and drink; who doubtless thought, especially the English, that the country would have reimbursed it again, otherwise they would hardly have accepted it of him. Colonel Church's soldiers both English and Indians in those parts being raised, marched them all down to Nantasket, according to his excellency's directions; where being come, the following gentlemen were commissioned to be commanders of each particular company, viz. Lieutenant Colonel Gorham, Captains John Brown, Constant Church, James Cole, John Dyer, John Cook, Caleb Williamson, and Edward Church, of the forces raised by Colonel Church, each company being filled up with English and Indians as they agreed among themselves, and by the colonel's directions; Captain Lamb, and Captain Mirick's company, who were raised by his excellency's direction, were ordered to join those aforesaid, under the command of Colonel Church. Matters being brought thus far on, Colonel Church waited upon his excellency at Boston to know his pleasure, what further measures were to be taken; and did humbly move that they might have liberty in their instructions to make an attack upon Port-Royal; being very well satisfied in his opinion, that with the blessing of God, with what forces they had or should have; and whale-boats so well fitted with oars and paddles, as they had with them might be sufficient to have taken it. His excellency, looking upon Colonel Church, replied, he could not admit of that, by reason he had by the advice of her majesty's council, writ to her majesty about the taking of Port-Royal fort, and how it should be disposed of when taken. However Colonel Church proceeding to get every thing ready for the forces down at Nantasket, which was the place of parade. He happening one day to be at Captain Belcher's, where his excellency happened to come; who was pleased to order Colonel Church to put on his sword, and walk with him up the common, which he readily complied with. Where being come he saw two mortar pieces with shells, and an engineer trying with them to throw a shell from them to any spot of ground where he said it should fall. Which, when Colonel Church had seen done, gave him great encouragement and hopes that it would promote their going to Port-Royal, which he had solicited for; and returning from thence, after they had seen them tried by the said engineer, and performing what was proposed, coming near to Captain William Clark's house, over against the horse-shoe, his excellency was invited by Captain Clark to walk over and take a glass of wine; which he was pleased to accept of, and took Colonel Church with him; and in the time they were taking a glass of wine, Colonel Church once more presumed to say to his excellency, "Sir, I hope that now we shall go to Port-Royal in order to take it; those mortars being very suitable for such an enterprise." His excellency was pleased to reply: "Colonel Church you must say no more of that matter, for the letter I told you of I writ by the advice of her majesty's council, now lies at home on the board before the lords commissioners of her majesty's foreign plantations." After some days every thing being ready to embark, Colonel Church received his instructions, which are as follows:—

By his Excellency Joseph Dudley, Esq., Captain-General and Governor-in-Chief in and over her Majesty's Province of the Massachusetts-Bay, &c., in New England, and Vice-Admiral of the same.

Instructions for Colonel Benjamin Church, in the present Expedition.

In pursuance of the commission given you to take the chief command of the land and sea forces by me raised, equipped, and set forth on her majesty's service, against her open declared enemies the French and Indian rebels, you are to observe the following instructions:

First, you are to take care, that the duties of religion be attended on board the several vessels, and in the several companies under your command, by daily prayers unto God, and reading his holy word; and that the Lord's day be observed and duly sanctified to the utmost of your power, as far as the circumstances and necessity of the service can admit, that so you may have the presence of God with, and obtain his blessing on your undertaking.

You are to take care that your soldiers have their due allowance of provisions and other necessaries; that their arms be well fixed, and kept fit for service, and that they be furnished with a suitable quantity of powder and ball, and be always in readiness to pass upon duty.

That good order and discipline be maintained; and all disorders, drunkenness, profane swearing, cursing, omission or neglect of duty, disobedience to officers, mutiny, desertion and sedition be duly punished according to the rules and articles of war; the which you are once a month, or oftener, to cause to be published and made known to your officers and soldiers for their observance and direction in their duty. Let notorious and capital offenders be sent away to the next garrisons, there to be imprisoned until they can be proceeded with.

Let the sick and wounded be carefully looked after, and accommodated after the best manner your circumstances will admit of, and be sent either to Casco-Fort, or to Mr. Peperel's at Kittery, which may be easiest, so soon as you can.

You are forthwith to send away the forces and stores by the transports, with the whale-boats to Piscataqua, on Kittery side, there to attend your coming; whither you are to follow them with all expedition.

You are to embark in the Province-Galley, Captain Southback, commander, and let Lietenant Colonel Gorham go on board Captain Gallop; who are both directed to attend your motion on the French side, after which they are to return. Let the commanders of all the store sloops and transports know that they sail, anchor, and serve at your direction.

When you sail from Piscataqua, keep at such distance off the shore, that you be not observed by the enemy to alarm them. Stop at Montinicus, and ther embark the forces in the whale-boats for the main, to range that part of the country, in search of the enemy, to Mount-Desart, sending the vessels to meet you there; and after having refreshed and recruited your soldiers, proceed to Machias, and from thence to Passamequado; and having effected what spoils you possibly may upon the enemy in those parts, embark on your vessels for Menis and Signecto, to Port-Royal Gut; and use all possible methods for the burning and destroying of the enemy's houses, and breaking the dams of their corn grounds in the said several places, and make what other spoils you can upon them, and bring away the prisoners. In your return call at Penobscot, and do what you can there, and so proceed westward.

This will probably employ you a month or six weeks, when you will draw together again, and by the latter end of June consider whether you can march to Norrigwack, or other parts of their planting, to destroy their corn and settlements, and keep the expedition on foot until the middle of August next.

Notwithstanding the particularity of the aforegoing instructions, I lay you under no restraint, because I am well assured of your courage, care, caution, and industry; but

refer you to your own resolves, by the advice of your commission officers, not under the degree of captains, and the sea commission captains (whom you will, as often as you can, advise with) according to the intelligence you may receive, or as you may find needful upon the spot.

You are by every opportunity, and once a week certainly, by some means, either by Casco, Piscataqua, or otherwise to acquaint me of your proceedings and all occurrences, and what may be further necessary for the service. And to observe such further and other instructions as you shall receive from myself.

As often as you may, advise with Captain Smith and Captain Rogers, commanders of her majesty's ships.

Let your minister, comissary, and surgeons be treated with just respects. I pray to God to preserve, prosper, and succeed you.

Given under my hand at Boston, the fourth day of May, 1704.

J. DUDLEY.

Pursuant to his instructions he sent away his transports and forces to Piscataqua, but was obliged himself to wait upon his excellency by land to Piscataqua, in order to raise more forces in the way thither; and did raise a company under the command of Captain Harridon; taking care also to provide a pilot for them in the bay of Fundy; Colonel Church being directed to one Fellows, whom he met with at Ipswich. And going from thence to Piscataqua with his excellency, was there met by that worthy gentleman Major Winthrop Hilton, who was very helpful to him in the whole expedition whose name and memory ought not to be forgot. Being ready to embark from Piscataqua, Colonel Church requested the commanders of her majesty's ships, Captain Smith and Captain Rogers to tarry at Piscataqua a fortnight, that so they might not be discovered by the enemy before he had done some spoil upon them. Then moving in their transports, as directed, got safe into Montinicus, undiscovered by the enemy. Next morning early, fitted out two whale-boats with men, Captain John Cooke in one, and Captain Constant Church in the other; and sent them to Green-Island, upon a discovery; and coming there they parted, one went to one part, and the other to the other part, that so they might not miss of what could be discovered; where they met with old Lafaure with his two sons Thomas and Timothy, and a Canada Indian. The enemy seeing that they were discovered, threw down their ducks and eggs, having a considerable quantity of each, and ran to their canoes, getting into them, stood directly for the Main; looking behind them, perceived the whale-boats to gain so fast upon them, clapt side by side, and all four got into one canoe, which proved of little advantage to them, for the whale-boats gained so much upon them, and got so near that Captain Cook, firing at the steer's-man, the Indian, and happened to graze his skull, and quite spoiled his paddling: upon which old Lafaure and sons, seeing their companion's condition, soon begged for quarter, and had it granted. The two captains with their success presently returned to their commander, taking care that their captives should not discourse together before they were examined; when brought to Colonel Church, he ordered them to be apart, and first proceeded to examine old Lafaure, whom he found to be very surly and cross, so that he could gain no manner of intelligence by him; upon which the commander was resolved to put in practice what he had formerly done at Senecto; ordering the Indians to make two large heaps of dry wood, at some distance one from the other, and to set a large stake in the ground, close to each heap; then ordered the two sons, Thomas and Timothy, to be brought, and to be bound to the stakes; also ordering his Indians to paint themselves with colours, which they had brought for that use. Then the colonel proceeded to examine first Timothy; and told him, he had examined his father already; and that if he told him the truth he would save his life, and take him into his service; and that he should have good pay and live well. He answered, that he would tell him the truth; and gave him an account of every thing he knew; which was all minuted down: he being asked whether his brother Thomas did not know more than he? His answer was, yes, for his brother Thomas had a commission sent him from the governor of Canada, to comand a company of Indians, who were gathered together at a place where some French gentlemen lately arrived from Canada, who were officers to command the rest that were to go westward to fight the English, and that there was sent to his father and brother Tom, a considerable quantity of flour, fruit, ammunition and stores, for the supply of the said army. He being asked, whether he could pilot our forces to them? Said no; but his brother Tom could, for he had hid it, and that he was not then with him. The colonel asked him, what gentlemen those were that came from Canada? He answered Monsieur Gourdan, and Mr. Sharkee. Being asked where they were? Answered at Passamequado, building a fort there. Being also asked, what number of Indians and French there were at Penobscot? He answered, there were several families, but they lived scattering. Asked him further, if he would pilot our forces thither? answered, he would if the commander would not let the savages roast him. Upon which the colonel ordered him to be loosed from the stake, and took him by the hand, told him, he would be as kind to him as his own father; at which he seemed to be very thankful. And then the colonel proceeded to examine his brother Tom, and told him that he had examined his father and brother, and that his brother had told him every tittle he knew, and that he knew more than his brother Timothy did; and that if he would be ingenuous and confess all he knew, he should fare as well as his brother; but if not, the savages should roast him. Whereupon he solemnly promised that he would, and that he would pilot him to every thing he knew, to the value of a knife and sheath (which with doubt he did.) Then the colonel immediately gave orders for the whale-boats to be ready, and went directly over where the said goods and stores were, and found them as informed, took them on board the boats, and returned to their transports; and ordering provisions to be put into every man's knapsack for six or eight days; so in the dusk of the evening left their transports, with orders how they should act; and went directly for the main land of Penobscot, and mouth of that river, with their pilots Tom and Timothy, who carried them directly to every place and habitation, both of French and Indian thereabouts, with the assistance of one De Young, whom they carried out of Boston gaol for the same purpose, who was very serviceable to them. Being there we killed and took every one, both French and Indians, not knowing that any one did escape in all Penobscot; among those that were taken was St. Casteen's daughter, who said that her husband was gone to France, to her father Monsieur Casteen. She having her children with her, the commander was very kind to her and them All the prisoners that were then taken, held to one story in general, which they had from Lafaure's sons; that there were no more Indians thereabouts, but enough of them at Passamequado; upon which they soon returned to their transports with their prisoners and plunder. The commander giving order immediately for the soldiers in the whale-boats to have a recruit of provisions for a further pursuit of the enemy, giving orders to the transports to stay a few days more there, and then go to Mount-Desart (and there to stay for her majesty's ships, who were directed to come thither) and there to wait his further order. Then Colonel Church with his forces immediately embarked on board their whale-boats, and proceeded to scour the coast, and to try if they could discover any of the enemy coming from Passamequado; making their stops in the daytime at all the points and where they were certain the enemy would land, or come by with their canoes, and at night to their paddles. Then coming near where the vessels were ordered to come, having made no discovery of the enemy, went directly to Mount Desart, where the transports were just come; and taking some provisions for his soldiers, gave direction for the ships and transports in six days to come directly to Passamequado, where they should find him and his forces. Then immediately moved away in the whale boats, and made diligent search along shore, as formerly, inspecting all places where the enemy was likely to lurk: particularly at Machias; but found neither fires nor tracks Coming afterwards to the west harbour at Passamequado, where they entered upon action; an account whereof Colonel Church did communicate to his excellency, being as followeth:

May it please your Excellency,

I received yours of this instant, Octobe 9th, with the two enclosed informations, that concern my actions at Passamequado, which I will give a just and true account of as near as possibly I can, viz. on the 7th of June last, 1704. In the evening we entered in at the westward harbour at said Passamequado; coming up said harbour to an island, where landing, we came to a French house, and took a French woman and children; the woman upon her examination said, her hus-

band was abroad fishing. I asked her whether there were any Indians thereabouts. She said yes, there were a great many, and several on that island. I asked her whether she could pilot me to them. Said no, they hid in the woods. I asked her when she saw them. Answered, just now, or a little while since. I asked her whether she knew where they had laid the canoes. She answered, no, they carried their canoes in the woods with them. We then hastened away along shore, seizing what prisoners we could, taking old Lotriel and his family.

This intelligence caused me to leave Colonel Gorham, and a considerable part of my men and boats with him, at that island, partly to guard and secure those prisoners, being sensible it would be a great trouble to have them to secure and guard at our next landing, where I did really expect, and hoped to have an opportunity to fight our Indian enemies; for all our French prisoners that we had taken at Penobscot, and along shore, had informed us, that when we came to the place where these Canada gentlemen lived, we should certainly meet with the savages to fight us, those being the only men that set the Indians against us, or upon us, and were newly come from Canada, to manage the war against us, (pleading in this account and information their own innocency) and partly in hopes that he, the said Colonel Gorham, would have a good opportunity in the morning to destroy some of those our enemies, (we were informed by the said French woman as above,) with the use of his boats, as I had given direction. Ordering also Major Hilton to pass over to the next island, that lay east of us, with a small party of men and boats, to surprise and destroy any of the enemy that in their canoes might go here and there, from any place, to make their flight from us, and, as he had opportunity, to take any French prisoners. We then immediately moved up the river, in the dark night, through great difficulties, by reason of the eddies and whirlpools, made with the fierceness of the current. And here it may be hinted, that we had information that Lotriel had lost part of his family passing over to the next island, falling into one of those eddies were drowned, which the two pilots told to discourage me. But I said nothing of that nature shall do it; for I was resolved to venture up, and therefore, forthwith paddling our boats as privately as we could, and with as much expedition as we could make with our paddles, and the help of a strong tide, we came up to Monsieur Gourdan's a little before day; where taking notice of the shore, and finding it somewhat open and clear, I ordered Captain Mirick and Captain Cole, having English companies, to tarry with several of the boats to be ready, that if any of the enemy should come down out of the brush into the bay, (it being very broad in that place) with their canoes, they might take and destroy them; ordering the remainder of the army being landed, with myself and the other officers, to march up into the woods, with a wide front, and to keep at a considerable distance, for that if they should run in heaps the enemy would have the greater advantage; and further directing them that, if possible, they should destroy the enemy with their hatchets, and not fire a gun. This order I always gave at landing, telling them the inconveniency of firing, in that it might be, first, dangerous to themselves, they being many of them young soldiers, as I had some time observed that one or two guns being fired, many others would fire, at they knew not what, as happened presently after, and it would alarm the enemy, and give them opportunity to make their escape; and it might alarm the whole country, and also prevent all further action from taking effect. Orders being thus passed, we moved directly towards the woods, Le Faver's son directing us to a little hut or wigwam, which we immediately surrounded with a few men, the rest marching directly up into the woods, to see what wigwams or huts they could discover; myself made a little stop, ordering the pilot to tell them in the hut that they were surrounded with an army, and that if they would come forth and surrender themselves, they should have good quarter, but if not, they should all be knocked on the head and die. One of them showed himself; I asked who he was. He said, Gourdan, and begged for quarter. I told him he should have good quarter; adding further, that if there were any more in the house, they should come out. Then came out two men; Gourdan said they were his sons, and asked quarter for them, which was also granted. Then came out a woman and a little boy; she fell upon her knees, begged quarter for herself and children, and that I would not suffer the Indians to kill them. I told them they should have good quarter, and not be hurt. After which I ordered a small guard over them, and so moved presently up with the rest of my company, after them that were gone before; but looking on my right hand, over a little run, I saw something look black just by me, stopped, and heard a talking, stepped over, and saw a little hut or wigwam, with a crowd of people round about it, which was contrary to my former directions. Asked them what they were doing. They replied, there were some of the enemy in a house, and would not come out. I asked, what house. They said a bark house. I hastily bid them pull it down, and knock them on the head, never asking whether they were French or Indians, they being all enemies alike to me. And passing then to them, and seeing them in great disorder, so many of the army in a crowd together, acting so contrary to my command and direction, exposing themselves and the whole army to utter ruin, by their so disorderly crowding thick together; (had an enemy come upon them in that interim, and fired a volley amongst them, they could not have missed a shot;) and wholly neglecting their duty, in not attending my orders, in searching diligently for our lurking enemies in their wigwams, or by their fires where I had great hopes, and real expectations to meet with them.

I most certainly know that I was in an exceeding great passion, but not with those poor miserable enemies; for I took no notice of half a dozen of the enemy, when at the same time, I expected to be engaged with some hundreds of them, of whom we had a continued account, who were expected from Port-Royal side. In this heat of action, every word that I then spoke, I cannot give an account of, and I presume it is impossible. I stopped but little here, but went directly up into the woods, hoping to be better employed, with the rest of the army. I listened to hear, and looked earnestly to see what might be the next action; but meeting with many of the soldiers, they told me they had discovered nothing, we fetching a small compass round, came down again. It being pretty dark, I took notice, I saw two men lay dead, as I thought, at the end of the house where the door was, and immediately the guns went off, and they fired every man, as I thought, and most towards that place where I left the guard with Monsieur Gourdan. I had much ado to stop their firing, and told them I thought they were mad, and I believed they had not killed and wounded less than forty or fifty of our own men. And I asked them what they shot at. They answered, at a Frenchman that ran away. But to admiration no man was killed, but he, and one of our men wounded in the leg; and I turning about, a Frenchman spoke to me, and I gave him quarter. Daylight coming on, and no discovery made of the enemy, I went to the place where I had left Monsieur Gourdan, to examine him and his sons, who agreed in their examinations; told me two of their men were abroad. It proved a damage; and further told me, that Monsieur Sharkee lived several leagues up at the head of the river, at the falls, and all the Indians were fishing, and tending their corn there; and that Monsieur Sharkee had sent down to him to come up to him, to advise about the Indian army that was to go westward; but he had returned him answer, his business was urgent, and he could not come up; and that Sharkee and the Indians would certainly be down that day, or the next at the furthest, to come to conclude of that matter. This was a short night's action, and all sensible men do well know, that actions done in the dark (being in the night as aforesaid) under so many difficulties, as we then labored under, as before related, was a very hard task for one man, matters being circumstanced as in this action; which would not admit of calling a council, and at that time could not be confined thereunto; at which time I was transported above fear, or any sort of dread; yet being sensible of the danger in my armies crowding so thick together, and of the great duty incumbent on me to preserve them from all the danger I possibly could, for further improvement in the destruction of our implacable enemies; am ready to conclude, that I was very quick and absolute in giving such commands and orders, as I then apprehended most proper and advantageous. And had it not been for the intelligence I had received from the French we took at Penobscot, as before hinted, and the false report the French woman first took gave me, I had not been in such haste. I question not but those Frenchmen that were slain, had the same good quarter of other prisoners. But I ever looked on it a good providence of Almighty God, that some few of our cruel and bloody enemies were made sensible of their bloody cruelties, perpetrated on my dear and loving friends and countrymen; and that

the same measure, in part, meted to them, as they had been guilty of in a barbarous manner at Deerfield, and I hope justly. I hope God Almighty will accept hereof, although it may not be eligible to our French implacable enemies, and such others as are not our friends. The foregoing journal, and this short annexment I thought it my duty to exhibit, for the satisfaction of my friends and countrymen, whom I very faithfully and willingly served in the late expedition; and I hope will find acceptance with your excellency, the honourable council and representatives now assembled, as being done from the zeal I had in the said service of her majesty, and her good subjects here.

I remain your most humble,
And obedient servant,
BENJAMIN CHURCH.

This night's service being over, immediately Colonel Church leaves a sufficient guard with Gourdan and the other prisoners, moved in some whale-boats with the rest, and as they were going spied a small thing upon the water, at a great distance, which proved to be a birch canoe with two Indians in her. The colonel presently ordered the lightest boat he had to make the best of her way and cut them off from the shore; but the Indians perceiving their design, run their canoe ashore and fled. Colonel Church fearing they would run directly to Sharkee, made all the expedition imaginable; but it being ebb and the water low, was obliged to land, and make the best of their way through the woods, hoping to intercept the Indians, and get to Sharkee's house before them; which was two miles from where our forces landed. The colonel being ancient and unwieldy, desired serjeant Edee to run with him, and coming to several trees fallen, which he could not creep under or readily get over, would lay his breast against the tree, the said Edee turning him over, generally had cat-luck, falling on his feet, by which means kept in the front; and coming near to Sharkee's house, discovered some French and Indians making a wear in the river, and presently discovered the two Indians aforementioned, who called to them at work in the river; told them there was an army of English and Indians just by; who immediately left their work and ran, endeavoring to get to Sharkee's house, who, hearing the noise, took his lady and child, and ran into the woods. Our men running briskly fired and killed one of the Indians, and took the rest prisoners. Then going to Sharkee's house found a woman and child, to whom they gave good quarter; and finding that Madame Sharkee had left her silk clothes and fine linen behind her, our forces were desirous to have pursued and taken her; but Colonel Church forbade them, saying he would have her run and suffer, that she might be made sensible what hardships our poor people had suffered by them. Then proceeded to examine the prisoners newly taken, who gave him the same account he had before of the Indians being up at the falls. It being just night prevented our attacking of them that night; but next morning early they moved up to the falls, which was about a mile higher. But doubtless the enemy had some intelligence by the two aforesaid Indians, before our forces came, so that they all got on the other side of the river, and left some of their goods by the water-side to decoy our men, that so they might fire upon them, which indeed they effected; but through the providence of God never a man of ours was killed, and but one slightly wounded. After a short dispute, Colonel Church ordered that every man might take what they pleased of the fish which lay bundled up, and to burn the rest, which was a great quantity. The enemy seeing what our forces were about, and that their stock of fish was destroyed, and the season being over for getting any more, set up a hideous cry, and so ran all away into the woods; who being all on the other side of the river, ours could not follow them. Having done, our forces marched down to their boats at Sharkee's, and took their prisoners, beaver, and other plunder which they had got, and put it into their boats, and went down to Gourdan's house, where they had left Lieutenant Colonel Gorham and Major Hilton, with part of the forces to guard the prisoners, and kept a good look-out for more of the enemy, who, upon the Colonel's return, gave him an account that they had made no discovery of the enemy since he left them. Just then her majesty's ships and transports arriving, the commanders of her majesty's ships told Colonel Church that they had orders to go directly for Port-Royal Gut, and wait the coming of some store-ships, which were expected at Port-Royal from France; and Colonel Church advising with them, proposed that it was very expedient and serviceable to the Crown, that Captain Southback in the Province Galley should accompany them, which they did readily acquiesce with him in. Upon which the colonel immediately embarked his forces on board the transports, and himself on board Captain Jarvis; ordering the commissary of the stores, the minister, surgeons, and pilots all to embark on board the same vessel with him; ordering all the whale-boats to be put on board the transports, and then to come to sail. The ships standing away for Port-Royal Gut, and Colonel Church with the transports for Menis. In their way the colonel inquired of their pilot Fellows, what depth of water there was in the creek, near the town of Menis. He answered him that there was water enough near the town to float that vessel they were in at low water. So when coming near, Colonel Church observed a woody island between them and the town, that they run up on the back side of the said island, with all their transports undiscovered to the enemy, and came to anchor. Then the colonel and all his forces embarked in the whale-boats, it being late in the day, moved directly for the town, and in the way asked for the pilot, whom he expected was in one of the boats; but he had given him the slip, and tarried behind. The colonel not knowing the difficulties that might attend their going up to the town, immediately sent Lieutenant Giles) who could speak French, with a flag of truce up to the town, with a summons, which was wrote before they landed, expecting their surrender; which is as follows:

Aboard Her Majesty's Ship Adventure, near the Gut of Menis, June 20, 1704.

An agreement made by the Field Officers commanding Her Majesty's forces for the present expedition against the French enemies, and Indian rebels:

AGREED,

That a declaration or summons be sent on shore at Menis and Port-Royal, under a flag of truce.

Particularly,

We do declare to you the many cruelties and barbarities that you and the Indians have been guilty of towards us, in laying waste our country here in the east, at Casco, and the places adjacent; particularly, the horrid action at Deerfield, this last winter, in killing, massacreing, murdering, and scalping, without giving any notice at all, or opportunity to ask quarter at your hands; and, after all, carrying the remainder into captivity in the height of winter, of which they killed many in the journey, and exposed the rest to the hardships of cold and famine, worse than death itself. Which cruelties we are yet every day exposed unto, and exercised with.

We do also declare, that we have already made some beginnings of killing and scalping some Canada men, (which we have not been wont to do or allow) and are now come with a great number of English and Indians, all volunteers, with resolutions to subdue you, and make you sensible of your cruelties to us, by treating you after the same manner

At this time we expect our men-of-war and transport ships to be at Port-Royal We having but lately parted with them.

In the last place, we do declare to you, that inasmuch as some of you have shewn kindness to our captives, and expressed a love to, and a desire of being under the English government, we do therefore, notwithstanding all this, give you timely notice, and do demand a surrender immediately, by the laying down your arms, upon which we promise very good quarter; if not, you must expect the utmost severity.

BENJAMIN CHURCH, *Colonel.*
JOHN GORHAM, *Lieutenant Colonel.*
WINTHROP HILTON, *Major.*

To the Chief Commander of the town of Menis, and the inhabitants thereof, and we expect your answer positively, within an hour.

Then moving to the creek, expecting to have had water enough for the boats, as the pilot had informed them, but found not water enough for a canoe; so were obliged to land, intending to have been up at the town before the hour was out, that the summons expressed, (for their return was, that if our forces would not hurt their estates, then they would surrender, if otherwise intended, they should fight for them,) but meeting with several creeks near twenty or thirty feet deep, which were very muddy and dirty, so that the army could not get over them, was obliged to return to their boats again, and wait till within night before the tide served them to go up to the town, and then intended to go up, and not to fall to till morning, being in hopes that the banks of the creeks would shelter them from the enemy; but the tides rising so high, ex

posed them all to the enemy, who had the trees and woods to befriend them. And so came down in the night and fired smartly at our forces; but Colonel Church being in a pinnace that had a small cannon placed in the head, ordered it to be charged several times, with bullets in small bags, and fired at the enemy, which made such a rattling amongst the trees, that caused the enemy to draw off; and by the great providence of Almighty God, not one of our forces was hurt that night; but, as I have been informed, they had one Indian killed, and some others wounded, which was some discouragement to the enemy. Next morning, by break of day, Colonel Church ordered all his forces, and placed Major Hilton on the right wing, to run all up, driving the enemy before them, who leaving their town to our forces, but had carried away the best of their goods, which were soon found by our soldiers. The bulk of the enemy happening to lie against our right wing, caused the hottest dispute there, who lay behind logs and trees, till our forces, and Major Hilton who led them, came on upon them, and forced them to run; and notwithstanding the sharp firing of the enemy, by the repeated providence of God, there was never a man of ours killed or wounded.

Our soldiers not having been long in town before they found considerable quantities of strong drink, both brandy and claret, and being very greedy after it, especially the Indians, were very disorderly, firing at every pig, turkey, or fowl they saw, of which there were very plenty in the town, which endangered our own men. Colonel Church perceiving the disorder, and firing of his own men, ran to put a stop to it, had several shot come very near him; and finding what had occasioned this disorder, commanded his officers to knock out the heads of every cask of strong liquor they could find in the town, to prevent any further disturbance amongst his army; knowing it was impossible to have kept it from them, especially the Indians, if it was saved. Then some of the army, who were desirous to pursue the enemy, having heard them driving away their cattle, requested the colonel to let them go; who did and gave them their orders.—Captain Cooke and Captain Church to lead the two wings, and Lieutenant Barker, who led the colonel's company, in the centre; and the said Captain Cooke and Captain Church desired lieutenant Barker not to move too fast, so that he might have the benefit of their assistance, if he had occasion; but the said lieutenant not being so careful as he should have been, or at least was too eager, was shot down, and another man; which were all the men that were killed in the whole expedition. Towards night Colonel Church ordered some of his forces to pull down some of the houses, and others to get logs and make a fortification for his whole army to lodge in that night, that so they might be together: and just before night ordered some of his men to go and see if there were any men in any of the houses in the town; if not, to set them all on fire, which was done, and the whole town seemed to be on fire all at once. The next morning the colonel gave orders to his men to dig down the dams, and let the tide in to destroy all their corn, and every thing that was good, according to his instructions, and to burn the fortification which they had built the day before, and when the tide served to put all their plunder which they had got into the boats. Then ordering his soldiers to march at a good distance one from another; which caused the enemy to think that there were no less than a thousand men, as they said afterwards, and that their burning of the fortification, and doing as they did, caused the enemy to think that they were gone clear off, and not to return again. But it proved to the contrary, for Colonel Church and his forces only went aboard their transports, and there staid till the tide served; in the night embarked on board their whale-boats, landed some of his men, expecting they might meet with some of the enemy mending their dams; which they did, and with their boats went up another branch of the river, to another town or village; upon such a surprise took as many prisoners as they could desire. And it happened that Colonel Church was at the French captain's house when two gentlemen came post from the governor of Port-Royal to him, who was the chief commander at Menis, with an express to send away two companies of men to defend the king's fort there, and to give him an account, that there were three English men-of-war come into Port-Royal Gut or harbor; and that the men sent for must be posted away with all speed. Colonel Church, as was said before, being there, treated the two gentlemen very handsomely, and told them, he would send them back again post to their master on his business; and bid them give him his hearty thanks for sending him such good news, that part of his fleet was in so good a harbor. Then reading the summons to them that he had sent to Menis, further added, that their master, the governor of Port-Royal, must immediately send away a post to the governor of Canada, at Quebec, to prevent his further sending any of his cruel and bloody French and savages, as he had done lately upon Deerfield, where they had committed such horrible and bloody outrages upon those poor people that never did them any harm, as is intolerable to think of; and that for the future, if any such hostilities were made upon our frontier towns, or any of them, he would come out with a thousand savages and whale-boats convenient, and turn his back upon them, and let his savages scalp and roast the French; or at least treat them as their savages had treated ours. Also gave them an account of part of that action at Passamequado, and that his soldiers had killed and scalped some Canada men there, and would be glad to serve them so too, if he would permit them, which terrified them very much. The two French gentlemen that came post, made solemn promises that they would punctually do the colonel's message to their governor. So with the desire of the French people there that the governor might have this intelligence, Colonel Church dismissed them, and sent them away; telling the same story to several of the prisoners, and what they must expect if some speedy course was not taken to prevent further outrages upon the English. The number of prisoners then present, which were considerable, did unanimously entreat of Colonel Church that he would take them under the protection of the crown of England; making great promises of their fidelity to the same, begging with great agony of spirit to save their lives, and to protect them from his savages, whom they extremely dreaded. As to the matter of the savages, he told them, it would be just retaliation for him to permit his savages to treat the French in the same manner as the French with their savages treated our friends in our frontier towns; but as to his taking them under the protection of the crown of England, he utterly refused it, urging to them their former perfidiousness; they also urging to him that it would be impossible for any French to live any where in the Bay of Fundy, if they were not taken under the English government; for with the benefit of whale-boats, as the English call them, they could take and destroy all their people in the town of Menis, in one night. But he replied to them, it should never be; alleging to them that when they were so before, when Port-Royal was taken by the English, that it proved of very ill consequence to the crown of England, and the subjects thereof in our frontiers; for that our English traders supplying them, enabled them (which opportunity they improved) to supply the Indians, our bloody enemies; and therefore he could make no other terms of peace with them than that, if the French a Menis, Signecto, and Canada, would keep at home with their bloody savages, and not commit any hostilities upon any of our frontiers, we would return home and leave them; for that we lived at a great distance off, and had not come near them to hurt them now, had not the blood of our poor friends and brethren in all the frontiers of our province cried for vengeance; especially that late unheard-of barbarity committed upon the town of Deerfield; which wrought so generally on the hearts of our people, that our forces came out with that unanimity of spirit, both among the English and our savages, that we had not, nor needed a pressed man among them. The colonel also telling them, that if ever hereafter any of our frontiers, east or west were molested by them, as formerly, that he would, if God spared his life, return upon them with a thousand of his savages, if he wanted them, all volunteers, with our whale-boats, and would pursue them to the last extremity. The colonel's warm discourse with them wrought such a consternation in them, which they discovered by their fears, their hearts sensibly beating, and rising up as it were ready to choke them; confessed they were all his prisoners, and begged of him, for Jesus' sake, to save their lives, and the lives of their poor families, with such melting terms, as wrought relentings in the colonel's breast towards them; but however, he told them, that his intent was to carry as many prisoners home as he could, but that he had taken so many they were more than he had occasion for, nor desired any more, and therefore he would leave them. The colonel resolving the next day to complete all his action at Menis and to draw off, accordingly, sent his orders to Colonel Gorham and Major Hilton, with all the English companies, both officers and soldiers, except some few, which he thought he might have

occasion for, to go with the Indians in the whale-boats up the eastward river, where a third part of the inhabitants lived; that so he might prevent any reflection made on them, in leaving any part of the service undone. And therefore in the evening ordered all the whale-boats to be laid ready for the night's service; and accordingly, when the tide served, he went with his Indians up the river, where they did some spoil upon the enemy going up. In the morning several of their transports came to meet them, to their great rejoicing, whom they went on board, and soon came up with the whole fleet, with whom they joined, bending their course directly towards Port-Royal, where they were ordered. Coming to Port-Royal Gut, where their ships were, and calling a council according to his instructions, drew up their result, which is as follows:—

Present all the Field Officers, and Captains of the land forces.

Aboard the Province Galley, 4th July, 1704, *in Port-Royal harbour.*

We whose names are hereunto subscribed, having deliberately considered the cause in hand, whether it be proper to land all our forces, to offend and destroy as much as we can at Port-Royal, all or any part of the inhabitants thereof, and their estates, we are of opinion, that it is not for our interest and honor, and the country's whom we serve, to land or expose ourselves; but quit it wholly, and go on about our other business we have to do, for this reason, that we judge ourselves inferior to the strength of the enemy; and therefore the danger and risk we run, is greater than the advantage we can, or are likely to obtain, seeing the enemy hath such timely notice, and long opportunity to provide themselves against us, by our ships lying here in the road about twelve days, before we could join them from Menis, where we were during that time, and being so very meanly provided with necessaries convenient for such an undertaking with so small a number of men, not being above four hundred capable and fit for service to land; and understanding by all the intelligence we can get from both English and French prisoners, that the fort is exceedingly strong.

John Gorham, *Lieut. Col.*
Winthrop Hilton, *Major.*

Jos. Brown,	Constant Church,
James Cole,	John Dyer,
John Cook,	Joshua Lamb,
Isaac Myrick,	Caleb Williamson,
John Harradon,	Edward Church.

Having, pursuant to my instructions, taken the advice of the gentlemen above subscribed, and considering the weight of their reasons, I do concur therewith.

BENJ. CHURCH.

Whereas Colonel Church hath desired our opinions, as to the landing the forces at Port-Royal, they being but four hundred effective men to land, and by all the information both of French and English prisoners, the enemy having a greater number of men, and much better provided to receive, than they are to attack them, We do believe it is for the service of the crown, and the preservation of her majesty's subjects to act as above mentioned.

Thomas Smith,
George Rogers, Cyprian Southack.

After this, they concluded what should be next done; which was, that the ships should stay some days longer at Port-Royal Gut, and then go over to Mount-Desart harbour, and there stay till Colonel Church with his transports came to them. Being all ready, the colonel with his transports and forces went up the bay to Signecto, where they needed not a pilot, being several of them well acquainted there; and had not met with so many difficulties at Menis, had it not been that their pilot deceived them; who knew nothing of the matter, kept out of the way and landed not with them. And coming to Signecto, the enemy were all in arms ready to receive them. Colonel Church landing his men, the commander of the enemy waving his sword over his head, bid a challenge to them. The colonel ordering his two wings to march up a pace, and come upon the backs of the enemy, himself being in the centre, and the enemy knowing him, having been there before, shot chiefly at him; but through God's goodness received no harm, neither had he one man killed, nor but two slightly wounded, and then all ran into the woods, and left their town with nothing in it, having had timely notice of our forces, had carried all away out of the reach of our army; for Colonel Church while there with part of his forces ranged the woods, but to no purpose. Then returning to the town, did them what spoil he could, according to his instructions, and so drew off, and made the best of their way for Passamequado, and going in, in a great fog, one of their transports ran upon a rock, but was soon got off again. Then Colonel Church with some of his forces embarked in their whale-boats, and went amongst the islands, with an intent to go to Sharkee's, where they had destroyed the fish; but observing a springy place in a cove, went on shore to get some water to drink; it being a sandy beach, they espied tracks, the colonel presently ordered his men to scatter, and make search; soon found De Boisse's wife, who had formerly been Colonel Church's prisoner, and carried to Boston; but returned, who seemed glad to see him. She had with her two sons that were near men grown. The colonel ordering them apart, examined the woman first, who gave him this account following, that she had lived thereabouts ever since the fleet went by, and that she had never seen but two Indians since, who came in a canoe from Norrigwock; who asked her, what made her to be there alone? She told them, she had not seen a Frenchman nor an Indian, except those two since the English ships went by. Then the Indians told her there was not one Indian left except those two, who belong to the Gut of Canso, on this side of Canada; for those friars coming down with the Indians to M. Gourdans, and finding the Frenchmen slain, and their hair spoiled, being scalped, put them into a great consternation; and the friars told them it was impossible for them to live thereabouts, for the English with their whale-boats would serve them all so; upon which they all went to Norrigwock: also told her that when the English came alone through Penobscot, they had swept it of the inhabitants, as if it had been swept with a broom, neither French nor Indians escaping them: further told her, that when their fathers, the friars, and the Indians met together at Norrigwock they called a council, and the friars told the Indians, that they must look out for some other country, for that it was impossible for them to live there; also told them there was a river called Mossippee, where they might live quietly, and no English come near them—it being as far beyond Canada, as it was to it, and if they would go and live there, they would live and die with them, but if not they would leave them, and never come near them again. Whereupon they all agreed to go away; which they did, and left their rough household stuff, and corn behind them, and went all, except those two for Canada. Also her sons giving the same intelligence, so we had no reason to think but that it was true.

Colonel Church having done what he could there, embarked on board the transports, and went to Mount-Desart, found the ships there, but a rundlet rid off by a line in the harbour, which he ordered to be taken up, and opening of it found a letter, which gave him an account that the ships were gone home for Boston. Then he proceeded and went to Penobscot; where being come, made diligent search in those parts for the enemy, but could not find or make any discovery of them, or that any had been there since he left those parts, which caused him to believe what De Boisse's wife had told him was true.

I will only by the way just give a hint of what we heard since of the effects of this expedition, and then proceed: First, that the English forces that went to Norrigwock, found that the enemy was gone, and had left their rough household stuff and corn behind them; also not long after this expedition, there were several gentlemen sent down from Canada, to concert with our governor about the settling of a cartile for the exchange of prisoners; and that the governor of Canada has never since sent down an army upon our frontiers, except sometimes a scout of Indians to take some prisoners, that he might be informed of our state, and what we were acting; and always took care that the prisoners so taken should be civilly treated, and safely returned, as I have been informed; that some of the prisoners that were taken gave an account; so that we have great cause to believe that the message Colonel Church sent by the two French gentlemen from Menis, to the governor of Port-Royal, took effect, and was a means to bring peace in our borders. Then Colonel Church with his forces embarked on board the transports, and went to Casco-Bay, where they met with Captain Gallop, in a vessel from Boston, who had brought Colonel Church further orders; which was to send some of his forces up to Norrigwock, in pursuit of the enemy; but he being sensible that the enemy were out, and fatigued in the hard service they had already done, and wanted to get home, called a council, and agreed all to go, which accordingly they did, thus ending this expedition.
